Preface

The *International Energy Annual 1999* presents an overview of key international energy trends for production, consumption, imports, and exports of primary energy commodities in over 220 countries, dependencies, and areas of special sovereignty. Also included are population and gross domestic product data, as well as prices for crude oil and petroleum products in selected countries. Renewable energy sources reported in the *International Energy Annual 1999* include hydroelectric power and geothermal, solar, wind, and wood and waste electric power. Also included for the United States are geothermal, solar, and wood and waste energy not used for electricity generation.

This report is published to keep the public and other interested parties fully informed of primary energy supplies on a global basis. The data presented have been largely derived from published sources. The data have been converted to units of measurement and thermal values (Appendices E and F) familiar to the American public.

Important Notes: (1) The Energy Information Administration (EIA) reviews its databases each year and important revisions are made to the time series of individual countries during this review. Therefore, data in the *International Energy Annual 1999* may have been substantially revised with respect to previous editions. (2) The methodologies used to impute the gross heat content of hydroelectric, nuclear electric, geothermal electric, and solar, wind, and wood and waste electric power are discussed in

the “Note” section at the bottom of Tables C7, C8, C9, and C10, respectively.

Although EIA has mandatory data collection authority for collecting energy information within the United States, it has no authority to require reporting of data from foreign countries. Data for the *International Energy Annual* must be researched and collected from the most authoritative available sources outside EIA. Because EIA does not have access to the statistical surveys of other countries, it is not able to develop error estimates or revision errors such as might be developed in EIA’s domestic surveys.

EIA attempts to identify and collect the best data available for foreign countries. The most authoritative sources are usually the official national statistical reports of a country. However, data from official sources are not always available. Therefore, EIA also uses data from reputable secondary sources such as the Asia-Pacific Economic Cooperation forum, the International Energy Agency, the International Monetary Fund, the Latin American Energy Organization, the United Nations, the World Bank, and others. In addition, EIA uses industry reports, academic studies, trade publications, and other sources. Typically these sources are less timely and complete than mandatory survey data for the United States collected by EIA. As a result, it usually takes EIA about two years to prepare complete energy information for all foreign countries.

Many factors beyond EIA's control affect the reliability

Electronic Access and Related International (Energy) Web Page

The *International Energy Annual 1999* (IEA99) is also available on EIA's Internet site at:

<http://www.eia.doe.gov/iea>

The IEA99 on EIA's Internet site includes text and tables in HTML and PDF formats and most of the tables are also available there as downloadable spreadsheets, many with data for all countries for all of the years 1980-1999. The entire IEA99 publication is also available in PDF format on the EIA FTP site at:

<http://www.eia.doe.gov/pub/pdf/international/021999.pdf>

The IEA99 will also be available on the EIA CD-ROM, *Energy InfoDisc*.

Important Note: All of the data contained in the IEA99, as well as additional international energy data, forecasts, and analyses, are available on the **International (Energy) Channel** on EIA's Internet site at: **<http://www.eia.doe.gov/international>** (If you would like to be notified immediately by e-mail of any updates to the annual data, go to **http://www.eia.doe.gov/listserv_signup.html** and select the first item, **Annual Statistics**, in the **International** section. Then select the **Join aies** button.)

and integrity of foreign country data. These include a country's level of economic development, commitment to statistical programs, openness with information, and other considerations.

Publication of this report is in keeping with responsibilities given the Energy Information Administration (EIA) in Public Law 95-91/Section 205(a) that states:

The Administrator shall be responsible for carrying out a central, comprehensive, and unified energy data and information program which will collect, evaluate, assemble, analyze, and disseminate data and information....

H2 World Carbon Dioxide Emissions from the Consumption of Petroleum, 1990-1999	229
H3 World Carbon Dioxide Emissions from the Consumption and Flaring of Natural Gas, 1990-1999	232
H4 World Carbon Dioxide Emissions from the Consumption of Coal, 1990-1999	235
Glossary	241

WORLD ENERGY OVERVIEW

The *International Energy Annual* presents information and trends on world energy production and consumption for petroleum, natural gas, coal, and electricity. Production and consumption data are reported in standard units as well as British thermal units (Btu). Trade and reserves are shown for petroleum, natural gas, and coal. Data are provided on crude oil refining capacity and electricity installed capacity by type. Prices are included for selected crude oils and for refined petroleum products in selected countries. Population and Gross Domestic Product data are also provided.

(**Note:** In the discussion that follows, the data for total **production** of primary energy in 1990 and 1999 include production in the United States of 2.3 and 2.9 quadrillion Btu, respectively, of renewable energy not used for electricity generation. This renewable energy production includes ethanol blended into motor gasoline and geothermal, solar, and wood and waste energy not used for electricity generation. Likewise, the data for total **consumption** of primary energy in 1990 and 1999 include consumption in the United States of 2.1 and 2.9 quadrillion Btu, respectively, of renewable energy not used for electricity generation and selected electricity imports. Included are geothermal, solar, and wood and waste energy not used for electricity generation, electricity imports from Mexico that are derived from geothermal energy, and net imports of electricity from nonrenewable sources.)

World Primary Energy Production Trends

Between 1990 and 1999, the world's total output of primary energy--petroleum, natural gas, coal, and electric power (hydro, nuclear, geothermal, solar, wind, and wood and waste)--increased at an average annual rate of 0.9 percent (Table 2.9). World production increased from 351 quadrillion Btu in 1990 to 380 quadrillion Btu in 1999.

In 1999, petroleum (crude oil and natural gas plant liquids) continued to be the world's most important primary energy source, accounting for 39.4 percent, or 150 quadrillion Btu, of world primary energy production

(Table 2.9). Between 1990 and 1999, petroleum production increased by 6.7 million barrels per day, or 10.2 percent, rising from 65.2 to 71.9 million barrels per day (Tables 2.2 and 2.3). The Middle East had the largest production gain, followed by Western Europe, and Central and South America. Their combined gains over the period from 1990 to 1999 were 8.6 million barrels per day. In the Eastern Europe and Former U.S.S.R. region, average daily production fell by 3.8 million barrels per day.

Dry natural gas ranked second as a primary energy source, accounting for 23.0 percent of world primary energy production in 1999 (Table 2.9). Production of dry natural gas was 84.7 trillion cubic feet, or 87 quadrillion Btu, in 1999 (Tables 2.1 and 2.9). Production increased by 11.1 trillion cubic feet from 73.6 trillion cubic feet in 1990, a gain of 15 percent

Coal ranked third as a primary energy source in 1999, accounting for 22.3 percent of world primary energy production (Table 2.9). World coal production totaled 4.7 billion short tons--85 quadrillion Btu--in 1999, but it was down by 12.1 percent from the 1990 level of 5.4 billion short tons (Tables 2.1 and 2.9).

Hydro, nuclear, and other (geothermal, solar, wind, and wood and waste) electric power generation ranked fourth, fifth, and seventh, respectively, as primary energy sources in 1999, accounting for 7.1, 6.6, and 0.7 percent, respectively, of world primary energy production (Table 2.9). Together they accounted for a combined total of 5.2 trillion kilowatthours--55 quadrillion Btu--in 1999 (Tables 2.1 and 2.9). Nuclear electric power generation increased significantly between 1990 and 1999, rising from 1.9 trillion kilowatthours to 2.4 trillion kilowatthours, a 25.8-percent increase. Geothermal, solar, wind, and wood and waste electric power generation also increased significantly over the same period, rising from 129 billion kilowatthours to 227 billion kilowatthours, a 76.3-percent increase. Hydroelectric power continued to represent the largest share of primary electric power generation contributing 2.6 trillion kilowatthours in 1999, up 20.3 percent from 2.2 trillion kilowatthours in 1990.

In 1999, United States production of 2.9 quadrillion Btu of renewable energy not used for electricity generation ranked sixth as a primary energy source, accounting for 0.8 percent of world primary energy production.

Major Energy Producers and Consumers

In 1999, three countries--the United States, Russia, and China--were the leading producers and consumers of world energy (Tables F1 and E1). These three countries produced 38 percent and consumed 41 percent of the world's total energy.

The United States, Russia, China, Saudi Arabia, and Canada were the world's five largest producers of energy in 1999, supplying 47.9 percent of the world's total energy (Table F1). The next five leading producers of primary energy were the United Kingdom, Iran, Norway, India, and Mexico, and together they supplied an additional 13.1 percent of the world's total energy. The United States supplied 72.3 quadrillion Btu of primary energy, significantly more than the 41.5 quadrillion Btu produced by Russia or the 30.9 quadrillion Btu produced by China.

The United States, China, Russia, Japan, and Germany were the world's five largest consumers of primary energy in 1999, accounting for 49.9 percent of world energy consumption (Table E1). They were followed by Canada, India, France, the United Kingdom, and Brazil, which together accounted for an additional 14.0 percent of world energy consumption. The United States consumed 97.0 quadrillion Btu, more than three times as much as the 31.9 quadrillion Btu consumed by China, while Russia consumed 26.0 quadrillion Btu.

Regional Energy Production and Consumption

Comparisons of energy production and consumption by region help to highlight key energy trends since 1990. In **North America**, the overall production of energy rose by 7.1 quadrillion Btu between 1990 and 1999 (Table F1). The supply of natural gas increased significantly, by 3.6 quadrillion Btu, while the production of nuclear electric power and coal increased by 1.6 quadrillion Btu and 1.1 quadrillion Btu, respectively (Tables F4, F7, and F5). These increases more than offset a 1.6-quadrillion-Btu decrease in crude oil production (Table F2). Energy consumption in North America increased by 15.6

quadrillion Btu between 1990 and 1999, the second largest increase for any region (Table E1). The largest North American increases occurred in the consumption of petroleum, 5.4 quadrillion Btu, natural gas, 4.0 quadrillion Btu, coal, 2.9 quadrillion Btu, and nuclear electric power, 1.6 quadrillion Btu (Tables E2, E3, E4 and E6).

Overall production of energy in the **Central and South America** region increased by 8.2 quadrillion Btu between 1990 and 1999, led by increases in crude oil production, 4.4 quadrillion Btu, hydroelectric power generation, 1.7 quadrillion Btu, and natural gas production, 1.4 quadrillion Btu (Tables F1, F2, F6, and F4). Energy consumption in the Central and South America region increased by 6.2 quadrillion Btu over the same period (Table E1). The largest increases occurred in the consumption of petroleum, 2.8 quadrillion Btu, hydroelectric power, 1.7 quadrillion Btu, and natural gas, 1.3 quadrillion Btu (Tables E2, E5, and E3).

In 1999, total energy production in **Western Europe** was 5.8 quadrillion Btu higher than in 1990 (Table F1). Gains between 1990 and 1999 were greatest for crude oil, 4.6 quadrillion Btu, natural gas, 2.9 quadrillion Btu, and nuclear electric power generation, 1.5 quadrillion Btu (Tables F2, F4, and F7). These increases more than offset a sharp, 4.8-quadrillion-Btu, drop in coal production (Table F5). Western European energy consumption increased by 6.6 quadrillion Btu between 1990 and 1999 (Table E1). The increase was led by natural gas, 4.9 quadrillion Btu, petroleum, 3.1 quadrillion Btu, and nuclear electric power, 1.5 quadrillion Btu, which together more than offset a 4.2 quadrillion Btu decrease in coal consumption (Tables E3, E2, E6, and E4).

Between 1990 and 1999, both energy production and energy consumption in the **Eastern Europe and Former U.S.S.R.** region declined by more than 22 quadrillion Btu (Tables F1 and E1). As a result, this was the only region to experience declines in either total energy production or consumption over the period. The 22.9-quadrillion-Btu decline in energy production was concentrated in coal, 9.3 quadrillion Btu, crude oil, 8.2 quadrillion Btu, and natural gas, 5.3 quadrillion Btu (Tables F1, F5, F2, and F4). The 25.3-quadrillion-Btu decline in energy consumption included declines in petroleum, 10.1 quadrillion Btu, coal, 9.2 quadrillion Btu, and natural gas, 5.9 quadrillion Btu (Tables E1, E2, E4, and E3).

Since 1990, energy production in the **Middle East** increased by 12.1 quadrillion Btu, the second largest increase for any region (Table F1). The increase was

concentrated in crude oil, 8.5 quadrillion Btu, and natural gas, 3.2 quadrillion Btu (Tables F2 and F4). The increase in energy consumption in the Middle East between 1990 and 1999 was much smaller, only 5.3 quadrillion Btu (Table E1). The largest consumption increases were in natural gas, 2.9 quadrillion Btu, and petroleum, 2.2 quadrillion Btu (Tables E3 and E2).

Energy production in **Africa** increased by 5.2 quadrillion Btu between 1990 and 1999, led by increases in the production of crude oil, 1.8 quadrillion Btu, natural gas, 1.7 quadrillion Btu, and coal, 1.3 quadrillion Btu (Tables F1, F2, F4, and F5). Energy consumption in Africa grew more slowly over the same period, rising by only 2.4 quadrillion Btu, with petroleum consumption accounting for 1.0 quadrillion Btu of the increase, coal for 0.64 quadrillion Btu, and natural gas for 0.61 quadrillion Btu (Tables E1, E2, E4, and E3).

The largest regional increase in primary energy production between 1990 and 1999 occurred in the **Far East and Oceania** region, where production increased by 13.6 quadrillion Btu (Table F1). Coal production accounted for 4.3 quadrillion Btu, natural gas for 3.8 quadrillion Btu, nuclear electric power generation for 1.9 quadrillion Btu, crude oil for 1.8 quadrillion Btu, and hydroelectric power generation for 1.2 quadrillion Btu (Tables F5, F4, F7, F2, and F6). Consumption in this region increased by 24.9 quadrillion Btu over the same period, also the largest increase for any region (Table E1). 52 percent, or 12.8 quadrillion Btu, of this increase occurred in the consumption of petroleum (Table E2). At the same time, the consumption of natural gas increased by 4.5 quadrillion Btu, coal by 4.2 quadrillion Btu, nuclear electric power by 1.9 quadrillion Btu, and hydroelectric power by 1.2 quadrillion Btu (Tables E3, E4, E6, and E5).

Petroleum

Global production of petroleum (crude oil and natural gas plant liquids) increased by 6.7 million barrels per day between 1990 and 1999, an average annual rate of growth of 1.1 percent (Tables 2.2 and 2.3). Saudi Arabia, the United States, and Russia were the three largest producers of petroleum in 1999. Together, they produced 31.4 percent of the world's petroleum. Production from Iran and Mexico accounted for an additional 9.7 percent.

In 1999, the United States consumed 19.5 million barrels per day of petroleum—26 percent of world consumption (Table 1.2). Japan ranked a distant second in

consumption, with 5.6 million barrels per day, followed by China, Germany, and Russia.

Natural Gas

World production of dry natural gas increased by 11.1 trillion cubic feet, or at an average annual rate of 1.6 percent, over the period from 1990 to 1999 (Table 2.4). Russia was the leading producer in 1999 at 20.8 trillion cubic feet, followed by the United States at 18.6 trillion cubic feet. Together these two countries produced 47 percent of the world total. Canada ranked a distant third in production at 6.3 trillion cubic feet, followed by the United Kingdom and Algeria, with 3.5 and 2.9 trillion cubic feet, respectively. These three countries accounted for 15 percent of the world total.

In 1999, the United States, which was the leading consumer of dry natural gas at 21.7 trillion cubic feet, and Russia, which ranked second at 14.0 trillion cubic feet, together accounted for 42 percent of world consumption (Table 1.3). The United Kingdom ranked a distant third in consumption, with 3.3 trillion cubic feet, followed by Canada and Germany, at 3.1 and 3.0 trillion cubic feet, respectively.

Coal

Coal was the only primary energy source to experience a production decline between 1990 and 1999 (Table 2.1). Production decreased by 650 million short tons over the period. China was the leading producer in 1999 at 1.12 billion short tons—equivalent to 20.6 quadrillion Btu (Tables 2.5 and F5). The United States was the second leading producer in 1999 with 1.10 billion short tons—equivalent to 23.3 quadrillion Btu. India ranked a distant third at 328 million short tons—equivalent to 5.8 quadrillion Btu, followed by Australia, at 321 million short tons—equivalent to 6.2 quadrillion Btu, and Russia at 276 million short tons—equivalent to 4.3 quadrillion Btu. Together, these five countries accounted for 66 percent of world coal production in 1999 (Table 2.5).

China was also the largest consumer of coal in 1999, using 1.08 billion short tons, followed by the United States, which consumed 1.05 billion short tons, India, Russia, and Germany (Table 1.4). These five countries together accounted for 63 percent of world coal consumption.

Hydroelectric Power

The generation of hydroelectric power increased by 440 billion kilowatthours between 1990 and 1999, or at an average annual rate of 2.1 percent (Table 2.6). Canada, Brazil, the United States, China, and Russia, were the five largest producers of hydroelectric power in 1999. Their combined hydroelectric power generation accounted for 51 percent of the world total. Canada led the world with 340 billion kilowatthours or 3.5 quadrillion Btu (Tables 2.6 and F6). Brazil ranked second with 305.9 billion kilowatthours or 3.18 quadrillion Btu and the United States was a very close third with 305.6 billion kilowatthours or 3.16 quadrillion Btu. China was fourth with 223 billion kilowatthours or 2.3 quadrillion Btu, followed by Russia with 158 billion kilowatthours or 1.6 quadrillion Btu.

Nuclear Electric Power

The generation of nuclear electric power increased by 491 billion kilowatthours between 1990 and 1999, or at an average annual rate of 2.6 percent (Table 2.7). The United States led the world in nuclear electric power generation in 1999 with 728 billion kilowatthours or 7.7 quadrillion Btu (Tables 2.7 and F7). France was second with 375 billion kilowatthours or 3.9 quadrillion Btu and Japan ranked third with 309 billion kilowatthours or 3.2 quadrillion Btu. In 1999, these three countries generated 59 percent of the world's nuclear electric power (Table 2.7).

Geothermal, Solar, Wind, and Wood and Waste Electric Power

The generation of geothermal, solar, wind, and wood and waste electric power increased by 98 billion kilowatthours between 1990 and 1999, or at an average annual rate of 6.5 percent (Table 2.8). The United States led the world in geothermal, solar, wind, and wood and waste electric power generation in 1999 with 83.0 billion kilowatthours. Japan was second with 24.7 billion kilowatthours, followed by the Germany with 15.0 billion kilowatthours, Brazil with 9.9 billion kilowatthours, and Finland with 9.5 billion kilowatthours. These five countries accounted for 62 percent of the world geothermal, solar, wind, and wood and waste electric power generation in 1999.

Carbon Dioxide Emissions from the Consumption and Flaring of Fossil Fuels

Total world carbon dioxide emissions from the consumption of petroleum, natural gas, and coal, and the flaring of natural gas increased from 5.873 billion metric tons of carbon equivalent in 1990 to 6.144 billion metric tons in 1999, or by 4.6 percent (Table H1). (**Note: Carbon dioxide emissions are measured here in metric tons of carbon equivalent. Tons of carbon equivalent can be converted to tons of carbon dioxide gas by multiplying by 3.667.** One ton of carbon equivalent equals 3.667 tons of carbon dioxide gas.) The United States, China, Russia, Japan, and India were the world's five largest sources of carbon dioxide emissions from the consumption and flaring of fossil fuels in 1999, producing 51 percent of the world total. The next five leading producers of carbon dioxide emissions from the consumption and flaring of fossil fuels were Germany, the United Kingdom, Canada, Italy, and France, and together they produced an additional 12 percent of the world total. In 1999, total United States carbon dioxide emissions from the consumption and flaring of fossil fuels were 1.520 billion metric tons of carbon equivalent, more than two and one-quarter times as much as the 669 million metric tons produced by China, while Russia produced 400 million metric tons.

In 1999, the consumption of petroleum was the world's primary source of carbon dioxide emissions from the consumption and flaring of fossil fuels, accounting for 44 percent of the total (Tables H2 and H1). Between 1990 and 1999 emissions from the consumption of petroleum increased by 230 million metric tons, or 9.3 percent, rising from 2.482 to 2.712 billion metric tons. The United States was the largest producer of carbon dioxide from the consumption of petroleum in 1999 and accounted for 24 percent of the world total. Japan was the second largest producer, followed by China, Germany, and Russia, and together these four countries accounted for an additional 20 percent.

Coal ranked second as a source of carbon dioxide emissions from the consumption and flaring of fossil fuels in 1999, accounting for 35 percent of the total (Tables H4 and H1). World carbon dioxide emissions from the consumption of coal totaled 2.137 billion metric tons of carbon in 1999, down 6.0 percent from the 1990 level of 2.274 billion metric tons. The United States and China were the two largest producers of carbon dioxide from the consumption of coal in 1999 and together they accounted for 49 percent of the world total. India,

Russia, and Germany accounted for an additional 16 percent.

Carbon dioxide emissions from the consumption and flaring of natural gas accounted for the remaining 21 percent of carbon dioxide emissions from the consumption and flaring of fossil fuels in 1999 (Tables H3 and H1). Emissions from the consumption and flaring of natural gas increased from 1.117 billion metric tons of carbon in 1990 to 1.295 billion metric tons in 1999, or by 15.9 percent. The United States and Russia were the two largest producers of carbon dioxide from the consumption and flaring of natural gas in 1999 and together they accounted for 40 percent of the world total. The United Kingdom, Canada, and Germany accounted for an additional 11 percent.

¹ Preliminary.

² The Organization for Economic Cooperation and Development (OECD) includes Australia, Austria, Belgium, Canada, Czech Republic, Denmark (including data for Faroe Islands and Greenland), Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, South, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and the United States (including data for Guam, Hawaiian Trade Zone, Puerto Rico, and Virgin Islands, U.S.). Refer to Appendix A for a listing of OECD Europe.

³ The Organization of Petroleum Exporting Countries (OPEC) includes Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.

⁴ European Union (EU) includes Austria, Belgium, Denmark (including data for Faroe Islands), Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and United Kingdom.

⁵ International Energy Agency (IEA) includes Australia, Austria, Belgium, Canada, Czech Republic, Denmark (including data for Faroe Islands and Greenland), Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and the United States (including data for Guam, Hawaiian Trade Zone, Puerto Rico, and Virgin Islands, U.S.).

Notes: For consistency data reflect 1999 membership (as of December 31, 1999) for all years. The country groups OECD, OECD Europe, EU, and IEA include unified Germany. Data for the Czech Republic are included in the country groups OECD, OECD Europe, and IEA beginning in 1993, the year that the country came into existence. Sum of components may not equal total due to independent rounding.

Sources: See sources at the end of Sections 3, 4, 5, and 6.

¹ Preliminary.

² United States coal consumption is from Energy Information Administration, Annual Energy Review 1999, table 7.1.

--- Not applicable.

(s) = Value less than 5 thousand short tons.

Notes: Sum of components may not equal total due to independent rounding.

See Glossary for definition of apparent coal consumption.

Sources: See sources at the end of Section 5.

¹ Preliminary.

² Includes hydroelectric pumped storage.

--= Not applicable.

(s) = Value less than 50 million kilowatthours.

Notes: Sum of components may not equal total due to independent rounding.

Consumption does not account for thermal equivalent conversion losses.

Data are reported as net consumption as opposed to gross. Net consumption excludes the energy consumed by the generating units.

Sources: See sources at the end of Section 6.

¹ Preliminary.

-- Not applicable.

(s) = Value less than 50 million kilowatthours.

Notes: Sum of components may not equal total due to independent rounding.

Consumption does not account for thermal equivalent conversion losses.

Data are reported as net consumption as opposed to gross. Net consumption excludes the energy consumed by the generating units.

No consumption is reported for Middle East.

Sources: See sources at the end of Section 6.

¹ Preliminary.

² The Organization for Economic Cooperation and Development (OECD) includes Australia, Austria, Belgium, Canada, Czech Republic, Denmark (including data for Faroe Islands and Greenland), Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, South, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and the United States (including data for Guam, Hawaiian Trade Zone, Puerto Rico, and Virgin Islands, U.S.). Refer to Appendix A for a listing of OECD Europe.

³ The Organization of Petroleum Exporting Countries (OPEC) includes Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.

⁴ European Union (EU) includes Austria, Belgium, Denmark (including data for Faroe Islands), Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and United Kingdom.

⁵ International Energy Agency (IEA) includes Australia, Austria, Belgium, Canada, Czech Republic, Denmark (including data for Faroe Islands and Greenland), Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and the United States (including data for Guam, Hawaiian Trade Zone, Puerto Rico, and Virgin Islands, U.S.).

⁶ Total primary energy consumption, as reported here, includes all of the fuel types reported in this table. It also includes for the United States: (1) the consumption of geothermal, solar, and wood and waste energy not used for electricity generation; (2) electricity imports from Mexico that are derived from geothermal energy; and (3) net imports of electricity derived from nonrenewable sources. It has also been adjusted to include total electricity imports and to exclude total electricity exports for all countries, except the United States. This adjustment is necessary because the consumption data for electric power by type, as reported in this table, are not adjusted for electricity imports and exports, except for hydroelectric power in the United States. As a result of these adjustments, total primary energy consumption reported in this table might not be equal to sum of the individual fuel types reported in this table.

(s) = Value less than 5 trillion Btu.

Notes: For consistency data reflect 1999 membership (as of December 31, 1999) for all years. The country groups OECD, OECD Europe, EU, and IEA include unified Germany. Data for the Czech Republic are included in the country groups OECD, OECD Europe, and IEA beginning in 1993, the year that the country came into existence. Sum of components may not equal total due to independent rounding.

Sources: See sources at the end of Sections 3, 4, 5, and 6.

¹ Preliminary.

² Includes oil processed from Athabasca Tar Sands.

--= Not applicable.

(s) = Value less than 500 barrels per day.

Notes: Sum of components may not equal total due to independent rounding. Crude oil includes lease condensate.

Sources: See sources at the end of Section 3.

¹ Preliminary.

² United States coal production is from Energy Information Administration, Annual Energy Review 1999, table 7.1.

--= Not applicable.

(s) = Value less than 5 thousand short tons.

Notes: Sum of components may not equal total due to independent rounding.

Coal includes anthracite, subanthracite, bituminous, subbituminous, lignite, and brown coal.

Sources: See sources at the end of Section 5.

¹ Preliminary.

² Includes hydroelectric pumped storage.

--= Not applicable.

(s) = Value less than 50 million kilowatthours.

Notes: Sum of components may not equal total due to independent rounding.

Generation data consist of both utility and nonutility sources. Data are reported as net generation as opposed to gross. Net generation excludes the energy consumed by the generating unit and excludes generation from pumped storage.

Sources: See sources at the end of Section 6.

¹ Preliminary.

--= Not applicable.

(s) = Value less than 50 million kilowatthours.

Notes: Sum of components may not equal total due to independent rounding.

Generation data consist of both utility and nonutility sources. Data are reported as net generation as opposed to gross. Net generation excludes the energy consumed by the generating unit.

Sources: See sources at the end of Section 6.

¹ Preliminary.

² Data include the production of crude oil and natural gas plant liquids.

³ The Organization for Economic Cooperation and Development (OECD) includes Australia, Austria, Belgium, Canada, Czech Republic, Denmark (including data for Faroe Islands and Greenland), Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, South, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and the United States (including data for Guam, Hawaiian Trade Zone, Puerto Rico, and Virgin Islands, U.S.). Refer to Appendix A for a listing of OECD Europe.

⁴ The Organization of Petroleum Exporting Countries (OPEC) includes Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.

⁵ European Union (EU) includes Austria, Belgium, Denmark (including data for Faroe Islands), Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and United Kingdom.

⁶ International Energy Agency (IEA) includes Australia, Austria, Belgium, Canada, Czech Republic, Denmark (including data for Faroe Islands and Greenland), Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and the United States (including data for Guam, Hawaiian Trade Zone, Puerto Rico, and Virgin Islands, U.S.).

⁷ Total primary energy production, as reported here, includes all of the fuel types reported in this table. It also includes for the United States the production of geothermal, solar, and wood and waste energy not used for electricity generation. As a result, total primary energy production might not be equal to sum of the individual fuel types reported in this table.

Notes: For consistency data reflect 1999 membership (as of December 31, 1999) for all years. The country groups OECD, OECD Europe, EU, and IEA include unified Germany. Data for the Czech Republic are included in the country groups OECD, OECD Europe, and IEA beginning in 1993, the year that the country came into existence. Sum of components may not equal total due to independent rounding.

Sources: See sources at the end of Sections 3, 4, 5, and 6.

¹ Oil production includes crude oil, natural gas plant liquids, other liquids, and refinery processing gains.

² Apparent consumption includes internal consumption, refinery fuel and loss, and bunkering. Also included, where available, are liquefied petroleum gases sold directly from natural gas processing plants for fuel or chemical uses.

(s)=Value less than 500 barrels per day.

Note: Sum of components may not equal total due to independent rounding.

¹ Jet Fuel includes naphtha-type jet fuel and kerosene-type jet fuel.

² Includes asphalt, coke, aviation gasoline, naphthas, paraffin wax, petrochemical feedstocks, unfinished oils, white spirits, and blending components.

³ Refinery fuel and loss reported in this column as a memo item has been included in the output of the individual petroleum products and should not be added to "Total Output of Refined Petroleum Products".

(s)=Value less than 500 barrels per day.

Note: Sum of components may not equal total due to independent rounding.

¹ Jet fuel includes naphtha-type jet fuel and kerosene-type jet fuel.

² Includes asphalt, coke, aviation gasoline, naphthas, paraffin wax, petrochemical feedstocks, unfinished oils, white spirits, and blending components.

(s)=Value less than 500 barrels per day.

Note: Sum of components may not equal total due to independent rounding.

¹ Jet Fuel includes naphtha-type jet fuel and kerosene-type jet fuel.

² Includes asphalt, coke, aviation gasoline, naphthas, paraffin wax, petrochemical feedstocks, unfinished oils, white spirits, and blending components.

³ Apparent consumption includes internal consumption, refinery fuel and loss, and bunkering. Also included, where available, are liquefied petroleum gases sold directly from natural gas processing plants for fuel or chemical uses.

(s)=Value less than 500 barrels per day.

Note: Sum of components may not equal total due to independent rounding.

¹ Calendar day basis.

² United States data are as of January 1, 2000. Refinery cracking and reforming data for the United States are available only on a stream day basis. These figures have been converted to calendar days by reducing the stream day data by 5.2 percent. Thus, the United States cracking and reforming data are estimated.

--= Not applicable.

Note: Sum of components may not equal total due to independent rounding.

¹ Primary coal includes all coal mined and, when necessary, washed and sorted.

² Secondary coal (e.g. coke, briquets), is derived from primary coal.

(s) = Value less than 500 Short tons.

Note: Sum of components may not equal total due to independent rounding.

Sources: United States primary coal production is from Energy Information Administration, Annual Energy Review 1999, table 7.2. Bituminous production is the sum of bituminous coal and subbituminous coal from table 7.2. Sources for other countries are listed at the end of this Section.

¹ Preliminary.

² United States anthracite coal production is from Energy Information Administration, Annual Energy Review 1999, table 7.2.

-- Not applicable.

Notes: Sum of components may not equal total due to independent rounding.

No production is reported for Middle East.

Sources: See sources at the end of this Section.

¹ Preliminary.

² United States bituminous coal production is from Energy Information Administration, Annual Energy Review 1999, table 7.2. It is the sum of bituminous coal and subbituminous coal from table 7.2.

--= Not applicable.

(s) = Value less than 500 short tons.

Note: Sum of components may not equal total due to independent rounding.

Sources: See sources at the end of this Section.

¹ Preliminary.

² United States lignite coal production is from Energy Information Administration, Annual Energy Review 1999, table 7.2.

-- Not applicable.

(s) = Value less than 500 short tons.

Notes: Sum of components may not equal total due to independent rounding.

No production is reported for Central & South America. No production is reported for Middle East. No production is reported for Africa.

Sources: See sources at the end of this Section.

¹ Includes coke.

² Sum of production plus imports minus exports (from this Table) minus stock change.

³ United States coal production and apparent coal consumption are from Energy Information Administration, Annual Energy Review 1999, tables 1.2 and 1.3, respectively. Consumption is the sum of coal and coal coke net imports from table 1.3.

(s) = Value less than 0.5 trillion btu.

Note: Sum of components may not equal total due to independent rounding.

¹ Preliminary.

--= Not applicable.

(s) = Value less than 50 million kilowatthours.

Notes: Sum of components may not equal total due to independent rounding.

Thermal generation consist of electricity generated from coal, oil, and gas.

Generation data consist of both utility and nonutility sources.

Sources: See sources at the end of this Section.

¹ Preliminary.

-- Not applicable.

(s) = Value less than 50 million kilowatthours.

Notes: Sum of components may not equal total due to independent rounding.

Consumption equals generation plus imports minus exports minus distribution losses.

Sources: See sources at the end of this Section.

¹ Thermal generation consists of electricity generated from coal, oil, and gas.

² Geothermal and Other consists of geothermal, solar, wind, and wood and waste generation.

(s)=Value less than 50 million kilowatthours.

Notes: Generation data consist of both utility and nonutility sources. Sum of components may not equal total due to independent rounding.

Sources: See sources at the end of this Section.

¹ Percentage of sulfur contained by gross weight.

² Netback price at U.S. Gulf.

--=Not applicable.

(s)=No significant volume of exports.

Note: Most foreign crude oil prices are for the available date that is closest to January 1 of the year. The prices for crude oils from Brunei and Malaysia and the United States prices are averages for the month of January. The foreign crude oils are free on board (f.o.b.) at the port of lading. The United States refiner acquisition cost for imported crude oil includes all charges associated with the acquisition, transportation, and storage of imported crude oil up to the time that the oil is booked into the U.S. refineries.

¹Data are for the available time period that is closest to January 1, 2000. Daily, monthly, quarterly, and annual data are averages. (1Q=first quarter)

²Liquefied petroleum gas (LPG) prices refer to residential propane or a mixture of propane and butane.

³Price is for regular gasoline.

--=Not applicable.

Note: Comparisons between prices and price trends in different countries require care. They are of limited validity because of fluctuations in exchange rates; differences in product quality, marketing practices, and market structures; and the extent to which the standard categories of sales are representative of total national sales for a given period.

¹ Data for the United States are from the Energy Information Administration.

² Includes one-half of the reserves in the Neutral Zone.

NA = Not Available

(s) = Value less than 50 million barrels of crude oil or less than 50 billion cubic feet of natural gas.

Notes: Sum of components may not equal total due to independent rounding. All reserve data except those for the Former U.S.S.R. and natural gas reserves in Canada are proved reserves. Former U.S.S.R. data are "explored reserves," which are understood to be proved, and some probable. World Oil only reported disaggregated data for the Former U.S.S.R. Republics of Russia and Kazakhstan. Aggregated data for the other Republics of the Former U.S.S.R. were reported as 3.9 billion barrels of crude oil and 160.1 trillion cubic feet of natural gas.

¹ World Energy Council definition of "Proved Recoverable Reserves": Proved Recoverable Reserves are the tonnage within the Proved Amount in Place that can be recovered (extracted from the earth in raw form) under present and expected local economic conditions with existing available technology.

² Data represent both measured and indicated tonnage, as of January 1, 1999 (equated to December 31, 1998). The U.S. term "measured" approximates the term "proved" used by the World Energy Council. The U.S. "measured and indicated" data have been combined prior to depletion adjustments and cannot be recaptured as "measured alone."

--= Not applicable

Notes: Formerly entitled "World Estimated Recoverable Reserves of Coal." The estimates in this table are dependent on the judgment of each reporting country to interpret local economic conditions and its own mineral assessment criteria in terms of specified standards of the World Energy Council. Consequently, the data may not all meet the same standards of reliability and some data, including the Energy Information Administration's (EIA)'s, may not represent reserves of coal that are known to be recoverable under current economic conditions and regulations. Some data, including the EIA's, represent estimated recovery rates for highly reliable estimates of coal quantities in the ground that have physical characteristics like those of coals currently being profitably mined. U.S. coal rank approximations are based partly on Btu and may not match precisely borderline geologic ranks. Further, data in this table may represent different base years. Data for the U.S. represent recoverable coal estimates as of December 31, 1998. Data for other countries are as of December 31, 1996, the most recent period for which they are available. The Energy Information Administration does not certify the international reserves data but reproduces the information as a matter of convenience for the reader. Sum of components may not equal total due to independent rounding.

Sources: World Energy Council, 1998 Survey of Energy Resources, 1998. United States: Energy Information Administration. Unpublished file data of the Coal Reserves Data Base (December 2000).

¹As of January 1, 1987, Hawaiian Trade Zone data are included in the United States data.

²Under a Sino-British declaration of September 1984, Hong Kong reverted to Chinese control on July 1, 1997. It is now a semi-autonomous entity that exists pursuant to international agreement and maintains its own government apart from the People's Republic of China.

³Includes data for three independent countries - Federated States of Micronesia, Republic of the Marshall Islands, and Republic of Palau - and a United States territory, Commonwealth of the Northern Mariana Islands.

⁴Under the Sino-Portuguese Joint Declaration on the Question of Macau signed in 1987, Macau reverted to Chinese control on December 20, 1999. It is now a semi-autonomous entity that exists pursuant to international agreement and maintains its own government apart from the People's Republic of China.

⁵Membership is as of December 31, 1999.

¹ Preliminary.

-- Not applicable.

Notes: The data presented in this table are obtained by converting the gross domestic product (GDP) for each country measured in 1990 foreign currency units to U.S. dollars using 1990 annual average foreign currency market exchange rates. GDP figures theoretically should be converted by using purchasing power parity (PPP) rates to avoid the problem that the market exchange rate for a foreign currency is not a precise reflection of the purchasing power of that currency. In practice, it is often difficult to find generally agreeable PPP rates for some countries.

Appendix C

Conversion Factors and Heat Contents

Table C1 General Conversion Factors

Product	Barrels per Metric Ton
Refined Petroleum Products	
Asphalt	6.06
Distillate Fuel Oil	7.46
Gasoline, Aviation	8.90
Gasoline, Motor	8.53
Greases	6.30
Jet Fuel, Kerosene-Type	7.93
Jet Fuel, Naphtha-Type	8.27
Kerosene	7.73
Liquefied Petroleum Gas (LPG)	11.60
Lubricants	7.00
Miscellaneous Products	8.04
Naphthas	8.22
Natural Gas Liquids (NGL)	10.40
Natural Gasoline	10.00
Paraffin Oil	7.14
Paraffin Wax	7.87
Petrolatum	7.87
Petroleum Coke	5.51
Residual Fuel Oil	6.66
White Spirits	8.50
Crude Oil	See Table C2 on next page.

Product Unit	Equivalent
Liquid Fuels	
42 U.S. gallons	1 barrel
1 cubic meter	6.289 barrels
159 liters	1 barrel
Gaseous Fuels	
35.315 cubic feet	1 cubic meter
Liquefied Natural Gas (LNG)	
1 metric ton	48,700 cubic feet of natural gas
Solid Fuels	
1 long ton	1.120 short tons
1 metric ton	1.10231136 short tons
Heat	
1 quadrillion (10 ¹⁵) British thermal units (Btu)	1.055056 exa (10 ¹⁸) joules
1 exa (10 ¹⁸) joule	0.9478 quadrillion (10 ¹⁵) Btu

--= Not applicable.

Note: There is no generally accepted practice for evaluating the thermal conversion rates for power plants that generate electricity from hydroelectric sources. Therefore, estimates of the prevailing annual average heat content for fossil-fueled, steam-electric power plants are used to evaluate the heat content for hydroelectric power. By using that factor, it is possible to evaluate fossil fuel requirements for replacing those sources during periods of interruption such as droughts.

Sources: See sources at the end of Section 6.

Note: The average heat content of electricity generated by nuclear electric power plants is calculated by dividing the heat content of electricity consumed in nuclear generating units (3,412 Btu per kilowatthour) by the estimated efficiency factor (the ratio of output to input) for each nuclear power plant.

Sources: See sources at the end of Section 6.

Note: There is no generally accepted practice for evaluating the thermal conversion rates for power plants that generate electricity from solar, wind, and wood and waste. Therefore, estimates of the prevailing annual average heat content for fossil-fueled, steam-electric power plants are used to evaluate the heat content for solar, wind, and wood and waste power.

Sources: See sources at the end of Section 6.

Appendix D

**Oil and Gas Market
Chronology: 1999**

Oil and Gas Market Chronology: 1999

The following chronology lists international events of potential significance for world oil and natural gas markets in 1999. Sources include: *Dow Jones (DJ)*, *The Asian Wall Street Journal (Asian WSJ)*, *The Los Angeles Times (LAT)*, *The New York Times (NYT)*, *USA Today (USA)*, *The Washington Post (WP)*, *The Wall Street Journal (WSJ)*, and *The Washington Times (WT)*.

(Note: For monthly chronologies for 1996-2000 and annual highlights for 1970-2000, see the Chronologies section of our International (Energy) Web Page at (<http://www.eia.doe.gov/emeu/international/chronolo.html>).

- Jan. 1** British Petroleum Company and Amoco Corporation complete their \$53 billion merger. Chicago-based Amoco is the United States' fifth-largest oil company with roughly 9,300 gasoline stations. London-based British Petroleum, the world's third largest oil company, sells its products through a network of about 17,900 stations. (DJ)
- Jan. 4** Iraq and Jordan renew an agreement that will provide Jordan with Iraqi crude oil and refined petroleum products. Jordan's 1998 imports of Iraqi crude oil and refined petroleum products, including fuel oil and diesel, were estimated to have averaged about 100,000 barrels per day. This figure is expected to increase by 5 to 7 percent in 1999. (DJ)
- Jan. 5** Azerbaijan's state oil company SOCAR reports that it just exceeded its oil production target for 1998, while registering a shortfall in planned natural gas output. According to SOCAR, oil output in 1998 was about 180,000 barrels per day. Gas output reached nearly 198 billion cubic feet, 21 billion cubic feet below the planned figure. (DJ)
- Jan. 6** Turkmenistan and Ukraine sign an agreement in Moscow that will allow the transit of about 705 billion cubic feet of Turkmen gas to Ukraine in 1999. (DJ)
- Jan. 7** Several of Kuwait's opposition legislators demand that any future oil contracts with foreign companies conform to the country's constitution. The legislators are not opposed to the recent proposals to allow foreign investment in the operational aspect of Kuwait's upstream oil sector, but they want to make sure there is no violation of Kuwait's constitution, which bans the foreign ownership of national resources. (DJ)
- Jan. 8** A new pipeline carrying crude oil from Azerbaijan's Caspian Sea fields across Georgia to the Black Sea port of Supsa begins operations. The new pipeline is expected to carry 50,000 barrels per day of oil in 1999 and marks another key development for the Caspian fields, which hold large reserves but have lacked an adequate pipeline system for exports. (DJ)
- Jan. 9** Russia's Khabarovsk regional administration grants Exxon Neftegaz Limited the rights to construct a natural gas pipeline from the Sakhalin region in Siberia through Khabarovsk and on to China, according to Russia's Itar-Tass news agency. (DJ)
- Jan. 11** Iraq rejects a proposal by Saudi Arabia to ease United Nations trade sanctions imposed on Iraq for its 1990 invasion of Kuwait. The initiative would recommend that Iraq be allowed to buy and sell all goods, except military equipment or materials that could be used for military purposes. (DJ)
- Jan. 11** The Organization of Petroleum Exporting Countries (OPEC) releases figures showing that the December 1998 average price for the reference basket of seven crude oils used by OPEC as a gauge of world oil prices was the second lowest since July 1986. The December average was \$9.69 per barrel, down from \$11.19 per barrel in November 1998, and just a few cents above the July 1986 record low of \$9.04 per barrel. (DJ)
- Jan. 13** As many oil-producing countries try to cut excess global production, Iraq announces plans to raise its oil output to 3 million barrels per day from its current 2.5 million barrels per day, and then to 3.5 million barrels per day within two years. Faleh al-Khayat, the Iraqi Oil Ministry's Director-General of Planning, says that the increases are contingent upon receiving spare parts for the country's ailing oil industry, which has been under United Nations trade sanctions for more than eight years. (WT)

- Jan. 13** A British oil worker kidnapped by Yemeni tribesmen is released unharmed. John Brooke was kidnapped by armed men from the Daham tribe who were demanding the release of a tribe member arrested three months ago on a murder charge. Brooke was taken at an oilfield run by the American Halliburton oil company in the Marib province, 105 miles southeast of the Yemeni capital of Sanaa. (DJ)
- Jan. 14** Santa Fe Energy agrees to acquire Snyder Oil for about \$450 million in stock in a deal combining the two mid-size independent oil companies into what would be called Santa Fe Snyder Corporation. The new company will have one-third of its oil and natural gas reserves overseas and two-thirds in the United States. Oil will represent about 60 percent of the total reserves. (DJ)
- Jan. 15** The United States proposes allowing Iraq to sell unlimited amounts of oil - but only if the proceeds go to buy food and other humanitarian supplies for the Iraqi people. The United Nations Security Council barred Iraq from freely exporting oil, its most valuable commodity, after its invasion of Kuwait in 1990. Concerned that sanctions were creating devastating hardships for Iraq's 22 million people, the Council agreed in 1995 to let Iraq sell limited amounts of oil to pay for humanitarian supplies. (USA)
- Jan. 18** More than 300 oil company officials attend a presentation by Brazilian petroleum regulators discussing the first oil and natural gas exploration blocks to be opened to foreign investors. Brazil is in the process of opening up to 92 percent of its sedimentary basins to companies other than Petrobras, the country's state-owned oil company. Twenty-seven blocks will be part of the first round of competitive bidding, which is to occur in 1999. (DJ)
- Jan. 25** Jordan's King Hussein appoints his eldest son, Abdullah, as his future successor. Hussein, who is suffering from cancer, passed over his brother Hassan, who had been Crown Prince for more than three decades. Abdullah, 36, is a career army officer. (DJ)
- Jan. 25** Iranian President Mohammad Khatami approves a plan to restructure Iran's Oil Ministry. The plan focuses on decentralization of control by separating policy making from executive affairs, according to the official Islamic Republic News Agency. (DJ)
- Jan. 31** According to U.S. officials, over the month of January, a series of almost daily U.S. missile air strikes on Iraq's air defenses has had a "grave impact" on President Saddam Hussein's ability to challenge allied enforcement of the no-fly zones over northern and southern Iraq. (DJ)
- Feb. 1** In southern Nigeria, a clash between Nigerian youths demanding work at a Shell oil terminal and Nigerian soldiers trying to break up the protest results in approximately 19 casualties. Shell temporarily shuts down the oil terminal as a result. The terminal handles more than 40 percent of Nigeria's crude oil exports. Protests against Shell were first reported in the early 1990s. Nigerians have demanded employment in oil industry projects and development projects in their villages, and also compensation for use of their land, oil spills and other environmental damage. The number of protests has increased in recent years due to greater awareness of and discontent with the unequal distribution of wealth in the oil-based economy. (DJ)
- Feb. 2** Arco Oriente Inc., a unit of U.S. Atlantic Richfield Company (ARCO) in Ecuador, temporarily halts operations in the Pastaza province, after about 1,200 residents in the area seize the company's oil installation. After several hours, the residents are forced to leave the company's compound by the Ecuadorian Army. The residents seized the installation in an effort to disburse around \$4 million to finish construction of a road linking the cities of Puyo and Banos in Pastaza. The remote eastern jungle region contains about 200 million barrels of oil reserves. (DJ)
- Feb. 3** A senior Iraqi oil minister says Iraq boosted its oil exports via its pipeline through Turkey by 107 percent in 1998. The pipeline links northern Iraqi oil fields like Kirkuk with the Turkish terminal of Ceyhan on the Mediterranean. Under the U.N.-approved "oil-for-food" program, which allows Iraq to sell up to \$5.2 billion of oil every six months, Iraq must pump the largest portion of its exports through Turkey. (DJ)
- Feb. 4** Italy's ENI SpA and Russia's RAO Gazprom, the world's largest natural gas producer, agree to build a natural gas pipeline from Russia to Turkey at a cost of nearly \$3 billion. Each project partner will hold a 50 percent stake in the project. The proposed pipeline, called the Blue Stream project, is expensive by industry standards partly because it would run at great depth under the waters of the Black Sea. (Asian WSJ)
- Feb. 7** Jordan's King Hussein dies at the age of 63 from non-Hodgkins lymphoma. Hussein, who served as King of Jordan since May 2, 1953, had only a few days earlier appointed his eldest son, Abdullah, as his successor. Abdullah, 36, is a

career army officer. Although containing almost no oil or gas resources of its own, Jordan is important to world oil markets because of its strategic location bordering Iraq, Saudi Arabia, Israel and Syria. Jordan also is an important trading partner of Iraq. (DJ)

- Feb. 10** U.S. Energy Secretary Bill Richardson visits Saudi Arabia to discuss potential U.S. investment in the Kingdom's oil and gas sectors. Following his visit, Richardson says the Saudis are primarily interested in foreign investment in the natural gas sector and in the oil refining and marketing sectors, rather than in the upstream crude oil sector. Secretary Richardson's visit comes several months after a September 1998 meeting between several U.S. oil companies, Saudi Crown Prince Abdullah and Saudi Oil Minister Ali Naimi, in which Abdullah requested proposals from the companies on the development of Saudi oil reserves. (DJ) (USA) (WSJ)
- Feb. 11** Bangladesh and the United States sign three agreements aimed at helping Bangladesh reorganize its energy sector to avoid power shortages and to improve the extraction and sale of natural gas. The two sides will work together to assess Bangladesh's energy resources and to prepare a comprehensive energy policy. The United States and Bangladesh also will examine U.S. foreign investment options in Bangladesh's energy sector. (WP)
- Feb. 12** The U.S. government announces plans to purchase 28 million barrels of crude oil for placement in the federal Strategic Petroleum Reserve (SPR). The government announcement is aimed at helping small U.S. oil companies, which have been hurt due to the low oil price environment since late 1997. (DJ) (USA)
- Feb. 15** Turkmenistan awards a \$2.4 billion natural gas pipeline project to an American consortium including Amoco Corporation, and a new pipeline joint venture called PSG International, which is owned by affiliates of Bechtel Enterprises Inc. and General Electric Company's GE Capital Corporation. The consortium will construct a natural gas pipeline from fields in eastern Turkmenistan across the Caspian Sea through Azerbaijan and Georgia to the Erzurum in eastern Turkey. Issues the pipeline consortium will face include Turkmenistan's territorial dispute with Azerbaijan, and a determination by littoral states (those states touching the Caspian's shore) namely--Turkmenistan, Azerbaijan, Kazakhstan, Russia, and Iran-- on whether the Caspian Sea is a sea or a lake. The outcome of these issues will impact conflicting territorial claims, including the ownership of oil fields and fishing rights. (WSJ)
- Feb. 18** Iraq announces that its section of a joint oil pipeline with Syria is almost ready. The pipeline links Iraqi oil fields located near the northern city of Kirkuk to Syria's Mediterranean terminal at Banias. A spur off of the main pipeline leads to the Lebanese port at Tripoli. In August 1998, Iraq and Syria signed an agreement to reopen the pipeline, which has been closed for more than 16 years. The pipeline was originally designed to handle 1.4 million barrels per day, but Iraqi oil officials believe that a lack of storage capacity and pumps will enable Iraq to reach an initial export rate of only around 400,000 barrels per day. Under existing sanctions, Iraq needs to obtain special permission from the United Nations to export oil through Syria. (DJ)
- Feb. 22** Kuwait Petroleum Corporation (KPC) confirms a new find of sweet (i.e. low sulfur) oil in the Kra al-Marow oilfield, located northwest of Kuwait City. According to KPC, preliminary results from the new field indicate a test production rate of 1,800 barrels per day. Kra al-Marow, according to KPC, could be as large as Burgan, Kuwait's largest oil field. (DJ)
- Feb. 22** Colombia's Cano Limon oil pipeline returns to normal operations after being shut down in a terrorist attack the previous week. The Cano Limon, with capacity to pump 175,000 barrels of oil per day, is a frequent target of leftist rebels who oppose foreign investment in the country's mineral resources. This marks the fourteenth such attack in 1999. (DJ)
- Feb. 28** Turkish officials report that a U.S. bombing attack on Iraq damages communications at an oil-pumping facility in northern Iraq. Crude oil flows are temporarily disrupted on the line, which runs from Kirkuk in Iraq to Ceyhan in Turkey. (DJ) (NYT)
- Mar. 4** Alliance Pipeline L.P., a consortium of Canadian and U.S. pipeline companies, starts construction of a high-pressure natural gas pipeline system that will stretch from northeastern British Columbia and northwestern Alberta across Saskatchewan to the Chicago area. The pipeline will be approximately 1,445 miles long, 42 inches in diameter, and have a natural gas capacity of 1.3 billion cubic feet per day. The pipeline is expected to begin service in the second half of 2000. The consortium includes affiliates of Coastal Corporation, Duke Energy, Enbridge, Fort Chicago Energy Partners L.P., Williams Companies, Unocal, and Westcoast Energy. (DJ)
- Mar. 6** Sheik Isa bin Salman Al Khalifa, Emir of Bahrain since 1961, passes away unexpectedly, and his son, Sheik Hamad bin Isa Al Khalifa, is named as successor. Upon taking office, Sheikh Hamad pledges to follow his late father's pro-

Western policies. Although Bahrain has minimal oil and natural gas reserves, it is strategically located in the heart of the Persian Gulf. (DJ)

- Mar. 6** U.S. Secretary of Defense William Cohen and Saudi Arabia's King Fahd meet and reiterate their countries' commitments to maintaining friendly relations. Saudi Arabia, with one-quarter of the world's proven oil reserves, is an important source of crude oil imports for the United States, supplying 1.4 million barrels per day, or nearly 16 percent, of U.S. crude oil imports in the first 10 months of 1998. Secretary Cohen also holds talks with Saudi officials regarding the continuing U.S.-Iraqi air battle in the no-fly zone over Iraq. (DJ)
- Mar. 10** Reliant Energy, a large international energy services company based in Houston, agrees to spend \$2.4 billion over the next seven years to acquire approximately 60 percent of NV Energieproductiebedrijf UNA, one of the biggest power companies in the Netherlands. The transaction still must receive Dutch regulatory approval. The Netherlands, along with the rest of the European Community, is scheduled to begin opening up its electricity market to competition in 2007. The decision marks Reliant's first entry into the European electricity market. (WSJ)
- Mar. 15** Consortium members of Nigeria LNG Limited (NLNG), including Nigeria National Petroleum Corporation, Shell Gas BV, Elf Cleag Limited, and Agip International BV, confirm that a third liquefied natural gas (LNG) production train with a capacity of 2.9 million metric tons per year will be built, increasing NLNG's overall LNG processing capacity to 4.3 million metric tons per year. The third train is scheduled for completion by 2003, and more than 70 percent of the LNG already has been sold under a long-term (21-year) contract to Spanish gas supply company Enagas. NLNG's first two LNG trains are expected to come on line in the summer of 1999. (DJ)
- Mar. 16** El Paso Energy agrees to buy rival Sonat, for \$3.9 billion in stock and \$1.9 billion in assumed debt, creating the largest interstate natural gas pipeline company in the United States. The new company will be responsible for almost 25 percent of all natural gas transportation in the United States. (NYT) (WP)
- Mar. 20** After three years of negotiations, Enron Corporation, one of the world's largest energy companies, and the Qatari government cancel plans to build a \$4 billion liquefied natural gas (LNG) facility. Enron originally intended to ship about two million metric tons per year of Qatari LNG to India to fuel the Dabhol power plant and to sell the facility's remaining annual production to India and the Middle East. According to an Enron spokesman, the company has lined up other fuel suppliers for the Dabhol power plant, making the Qatar project less critical. Also, other suppliers have begun selling LNG in the Middle East and to India, making it more difficult for Enron to sell excess gas from the Qatar plant. (NYT)
- Mar. 23** In an effort to raise oil prices, which fell sharply in late 1997 and stayed low through 1998 and into early 1999, OPEC and non-OPEC countries agree to cut oil output by a combined 2.104 million barrels per day, effective April 1, 1999, for one year. OPEC members have pledged to cut 1.716 million barrels per day, while several non-OPEC countries have pledged total reductions of 388,000 barrels per day. During 1998, due mainly to low oil prices, OPEC crude oil export revenues fell 30 percent (to \$100 billion) from the previous year. (DJ) (NYT)
- Mar. 24** Scientists at the Atlantic Richfield Company (Arco) announce the development of a new transportation fuel that emits less pollution than regular diesel fuel. In preliminary testing, the new fuel, called EC Diesel, emitted 15 percent less particulates and 5 percent less nitrogen oxide without reducing fuel economy, according to Arco. Further testing of the new fuel is to take place in California during the month of April. Arco began testing the new fuel in anticipation of additional regulatory policies in California requiring further reduction in fuel emissions. (LAT) (NYT)
- Mar. 31** Arco agrees to be acquired by BP Amoco PLC for \$26.6 billion in stock. If approved, the merger will create the largest oil producer in the United States and one of the largest energy companies in the world. The deal marks the fourth largest oil company merger since the onset of low oil prices in late 1997. (DJ) (WSJ)
- Apr. 3** The Iraqi port of Mina al-Bakr, export terminal for roughly half of all Iraqi oil exports under the United Nations "oil-for-food" program, is reopened, following allied air strikes on Basra, in southern Iraq, the previous day. The attacks struck a communications facility and a radio relay station, which is used, in part, as one of three relay stations controlling the flow of crude oil from Iraq's southern oil fields to the port of Mina al-Bakr. (DJ)
- Apr. 5** Following the arrival in the Netherlands of two Libyan suspects in the 1988 bombing of Pan American Flight 103 that killed 270 people, United Nations sanctions against Libya are suspended. The sanctions, imposed on March 31, 1992, initially included a ban on the sale of equipment for refining and transporting oil, but excluded oil production

equipment. Sanctions were then expanded on November 11, 1993, to include a freeze on Libya's overseas assets, excluding revenue from oil, natural gas, or agricultural products. (DJ)

- Apr. 9** Saga Petroleum SA, a Norwegian company, announces that its oil interests in Angola are up for sale. A Saga spokesman said that the company will concentrate on developing low-cost oil reserves in Libya and possibly Iran, as opposed to more expensive deepwater acreage off Angola. (DJ)
- Apr. 12** The U.S. Deputy Ambassador to the United Nations, Peter Burleigh, becomes the first U.S. official to publicly reject a proposal that would allow direct foreign investment in Iraq's oil sector. The proposal was an attempt to allow Iraq to generate oil revenues closer to the target of \$5.26 billion every 180 days under the United Nations "oil-for-food" program. So far, Iraq has not come close to the target ceiling since it was raised last year. However, Burleigh says that, if recent oil price increases of \$5 to \$6 per barrel are sustained, Iraq could "get to the \$5.2 billion level for 6 months" by the end of the year. This would eliminate the need to enact "deep structural" changes in the "oil-for-food" program, according to Burleigh. (DJ)
- Apr. 15** A consortium of British Gas and Royal Dutch/Shell bought a controlling 53 percent stake in Cia. De Gas de Sao Paulo (Comgas), Brazil's largest natural gas distributor, for \$1 billion, more than double the Brazilian government's minimum asking price. The British Gas - Royal Dutch/Shell consortium beat out a rival bid from a consortium led by Enron Corporation and Italy's Agip. The privatization of Comgas is the first state asset sale since Brazil devalued its currency in January. (WSJ)
- Apr. 15** The U.S. Department of Energy (DOE) announces that it will begin taking oil deliveries within the next few days under its plan to add 28 million barrels of oil to the U.S. Government's Strategic Petroleum Reserve (SPR) from federal oil royalty payments. In Phase 1 of the plan, the SPR is expected to acquire about 43,000 barrels per day over the next 3 months from oil companies operating in the Gulf of Mexico. Although about 50 percent of the oil supplied in Phase 1 will be imported, domestic producers would still benefit from the entire acquisition since the oil market is international and fungible, according to a DOE official. Under Phase 2 of the program, the DOE expects to acquire about 100,000 barrels per day of royalty oil over a 6-month period. (DJ)
- Apr. 17** An oil pipeline that transports oil from Baku, Azerbaijan, to Supsa, Georgia, is officially opened. This is the second pipeline dedicated to exporting Caspian Sea oil, but the first built since the Soviet Union disbanded in 1991. The other Caspian Sea oil pipeline, which runs through the Russian breakaway republic of Chechnya to the Russian port of Novorossisk, is often shut down. The new pipeline to Georgia has a capacity of 100,000 barrels per day. (DJ)
- Apr. 20** The European Union follows the United Nations in suspending sanctions against Libya that prevented the supply of certain oil export and aviation-related goods and services (see April 5 item above). (DJ)
- Apr. 23** The United Nations temporarily waives the requirement under the Iraq "oil-for-food" program that more than half of Iraqi oil exports must go through the pipeline to Turkey. As Iraq's oil production has increased, capacity through the Iraq/Turkey pipeline has not kept pace. Designed to handle up to 1.1 million barrels per day, the pipeline's capacity is now only about 900,000 barrels per day due to needed repair work. It is currently unclear as to when repair work on the second Iraqi oil pipeline into Turkey might allow it to become operational. So far, only about 45 percent of Iraqi oil exports are going through the pipeline into Turkey. (DJ)
- Apr. 24** The chief executive officer of Total, a major French oil company, meets with the Crown Prince of Saudi Arabia to discuss the possibility of future oil investments in Saudi Arabia. This follows separate meetings between either the Crown Prince or the Saudi Arabian oil minister with the chief executives of Exxon, Mobil, Marathon, and Conoco earlier in the month. All of these meetings are a result of an invitation last September by the Crown Prince for oil executives to submit proposals on areas of investment in the Saudi oil and natural gas sectors. However, Saudi Arabia has stated that it is mainly interested in downstream oil and gas joint ventures, ruling out upstream oil development at this time, since Saudi Arabia feels it is self-sufficient in this aspect of the industry. (DJ)
- Apr. 24** The Kuwaiti oil minister announces that within the next 2 months, Kuwait is expecting to invite foreign oil companies to submit proposals for developing its northern oil fields. This would mark the first opening of the upstream sector in Kuwait since its oil industry was nationalized in the 1960s. However, the Kuwaiti oil minister made it clear that any foreign participation would be carried out in accordance with Kuwait's constitution, which bars foreign ownership of Kuwaiti natural resources. Total reserves of the fields being opened for development amount to 16 billion barrels. Kuwait hopes to increase production capacity from these fields to 1.3 million barrels per day from the current level of 590,000 barrels per day. (DJ)

- Apr. 26** The European Union passes a ban of fuel shipments from its member countries to Yugoslavia as a means of putting economic pressure on Yugoslav President Slobodan Milosevic. The ban on shipments of crude oil and refined petroleum products is to begin on May 1. It does not include a blockade on shipments from non-European Union members, an issue that is under study by the North Atlantic Treaty Organization. (DJ)
- Apr. 27** Azerbaijan's state-owned oil company Socar, signs 3 oil and natural gas production sharing agreements totaling an estimated \$10 billion with Exxon, Mobil, and privately-held Moncrief Oil International. Exxon's agreement with Socar to develop the offshore Zafar/Mashal exploration block will amount to a total investment of \$5 billion. Mobil's agreement to develop an offshore exploration block containing the Savalan, Dalga, Lerik-Deniz, and Janub prospects is worth about \$4.5 billion. The agreement between Socar and Texas-based Moncrief is for an onshore block in the Lower Kura River Valley and accounts for the remainder of the investment. (DJ)
- Apr. 28** The U.S. Department of Treasury's Office of Foreign Asset Control (OFAC) notifies Mobil that it has turned down Mobil's request for a license to swap crude oil it produces in Turkmenistan in exchange for Iranian oil. Mobil had hoped to be allowed to ship oil produced in Turkmenistan to northern Iranian oil refineries, while Iran, in turn, would provide Iranian oil from Iran's Persian Gulf export terminals to Mobil for shipment to global markets as payment. OFAC is responsible for enforcing U.S. unilateral sanctions against foreign countries. As a result of OFAC's denial of a swap arrangement with Iran, Mobil will have to continue exporting its Turkmenistan oil production across the Caspian Sea by barge to Azerbaijan, where it is then carried by rail or pipeline to Black Sea ports. (DJ) (WP)
- Apr. 29** Spain's Repsol announces a bid to acquire the 85.01 percent of Argentina's YPF that it does not already own. If the deal goes through, it would create the world's eighth largest energy group, with annual revenues of more than \$26 billion. Repsol is offering a 25.4 percent premium over YPF's closing price, which would amount to about \$13.44 billion if all of YPF's shareholders take the offer. Repsol said the deal would only go through if it could obtain at least a controlling share (more than 50 percent) of the company. In January, Repsol paid the Argentine government \$2.01 billion for a 14.99 percent share of YPF. Repsol is prepared to pay in cash, a requirement under YPF's company statutes for any buyer of 15 percent of more of YPF. (DJ)
- Apr. 30** Under new rules instituted by Ecuador's government, state-run Petroecuador will be allowed to have private partners, either foreign or domestic, in order to increase oil production. The rules state that the partnership contracts will have 20-year terms and be awarded to the companies or consortiums that offer the most participation for Petroecuador. As a result of the new rules, Ecuador is expecting investments of between \$1 billion and \$2 billion over the next four years. (DJ)
- May 1** A European Union (EU) ban on oil shipments to Yugoslavia takes effect in an effort to deny Yugoslav forces access to fuel. The ban calls on EU member nations to cease shipping oil to Yugoslavia. In addition, U.S. President Clinton signs an executive order imposing a U.S. embargo on trade with Serbia, that exempts the Yugoslav republic of Montenegro. A broader blockade of Yugoslavia by NATO is still being discussed. (DJ)
- May 1** U.S. President Clinton unveils a plan to apply the same standard for tailpipe emissions to cars, light-duty trucks, and most sport utility vehicles (SUVs). Based on current nitrogen oxides (NO_x) emission levels, the proposed plan would result in a 77 percent reduction for cars and a 95 percent reduction for light-duty trucks and SUVs. The new standards would be phased in during the 2004 to 2007 model years. At the same time, the Environmental Protection Agency (EPA) proposes a rule that would require refiners to reduce gasoline sulfur content from a current average of nearly 330 parts per million (ppm) to 30 ppm. The new sulfur standard is being proposed in conjunction with the new tailpipe emission proposal since sulfur impedes catalytic converter efficiency, thus making it more difficult to reduce tailpipe emissions without reducing sulfur content in gasoline. Oil industry representatives have vowed to protest the proposed rule, claiming that it will cost refiners \$3 billion to \$6 billion. The EPA estimates that the cost of compliance for both the automobile and oil industries will be between \$3.4 billion and \$4.4 billion. (DJ)
- May 4** Japan signs a contract to lend \$1 billion to the Korean Peninsula Energy Development Organization, which is building two light-water nuclear reactors in North Korea as part of a 1994 agreement between the United States and North Korea. The money was delayed for several months as Japan was considering whether to continue funding some of the project after North Korea fired a missile through Japanese air space in 1998. (WP)
- May 5** General Abdulsalami Abubakar, Nigeria's current leader, signs a new constitution designed to ensure a smooth transition from military rule to civilian rule when President-elect Olusegun Obasanjo assumes office on May 29. *Dow Jones* reported that General Abubakar hinted that the constitution would encourage decentralization of the federal

government. Nigeria has been governed by the military for all but 10 of the nearly 40 years since it became independent. (DJ)

- May 6** South Korea's Ministry of Commerce, Industry, and Energy reports that the country's energy consumption in the first quarter of 1999 rose by 11.4 percent compared to the same period in 1998. Oil consumption rose 11.5 percent over the same period, averaging 2.17 million barrels per day. The Ministry reported that the increase in oil consumption was a result of improving consumer confidence in the South Korean economy. (DJ)
- May 9** Elf Aquitaine, a major French oil company, submits a proposal to the Saudi Arabian government to set up a new natural gas and electricity project worth over \$1 billion. Elf is proposing to develop a natural gas field in central Saudi Arabia, and then to use the gas to fuel a new 1,500-megawatt electric power plant to be located near the gas field. This is the first firm proposal submitted to the Saudi Arabian government since Saudi Crown Prince Abdullah's recent invitation to major energy companies to invest in Saudi Arabia's oil and gas sectors. (DJ)
- May 10** The Board of Argentine oil company YPF unanimously approved a \$13.4 billion offer from Repsol, a Spanish company. Repsol, which already owns 14.99 percent of YPF, made an all cash offer to purchase the remaining 85.01 percent last month. The Board recommended to all shareholders to accept the Repsol offer. Two Argentine provinces, which own about five percent of YPF's shares, remain concerned about Repsol's intentions for their regions. (WSJ)
- May 10** Norsk Hydro, one of Norway's state-owned oil companies, offers to buy out privately owned Norwegian oil and gas exploration company, Saga Petroleum for more than \$2.2 billion. Saga's board of directors will consider the offer before making a recommendation to their shareholders. (WSJ) (DJ)
- May 11** The Independent Petroleum Association of America (IPAA) votes to be "an interested party" to a petition before the U.S. International Trade Commission to investigate "dumping" of crude oil into the United States by Mexico, Venezuela, Iraq, and Kuwait. By being an "interested party", the IPAA will be able to file briefs in the case, without being the initiator of the petition, according to IPAA vice chairman Jerry Jordan. The petition will be filed on May 28 by a group called "Save Domestic Oil", which is led by Oklahoma Basic Energy Corporation and Continental Resources, another Oklahoma-based company. (USA) (DJ)
- May 12** The Caspian Pipeline Consortium (CPC) begins construction of a 981-mile pipeline that will carry crude oil from the Caspian Sea to the Russian port of Novorossisk for export to foreign markets. The pipeline's planned capacity is about 1.3 million barrels per day, and the CPC is expecting to load the first tanker in mid-2001. (DJ)
- May 13** Saudi Arabia notifies U.S. crude oil customers that state oil company Saudi Aramco will cut term-contracted volumes of crude delivered to them in June by 20 percent to 25 percent. Saudi Aramco had earlier notified European crude oil customers of cuts in volume averaging 35 percent, with cuts for Asian customers averaging 17 percent. (DJ)
- May 13** The U.S. special envoy for Caspian Sea energy issues, Ambassador Richard Morningstar, delivers a U.S. proposal to President Niyazov of Turkmenistan on the sharing of Caspian energy resources between Turkmenistan and Azerbaijan. The proposal was developed by a panel of U.S. advisors to the Turkmen-Azerbaijani commission on determining the sea boundary delineation between the two states. The same proposal was delivered to the government of Azerbaijan on May 12. Contents of the U.S. proposal are not made public. (DJ)
- May 17** The Environmental Protection Agency (EPA) states that it will not change its "Tier Two Plan" to cut gasoline sulfur content and tailpipe emissions, in response to a recent appellate court ruling that the EPA had overstepped its mandate in implementing some provisions of the Clean Air Act. Beginning in 2004, the Tier Two Plan would require refiners to cut gasoline sulfur content to an average of 30 parts per million, down more than 90 percent from the current national average. (DJ)
- May 18** Acting Russian Fuel and Energy Minister Sergei Generalov states that Russia plans to maintain cuts in oil exports made in the first quarter of 1999 in support of efforts by the Organization of Petroleum Exporting Countries to raise oil prices. Russia had cut exports by 100,000 barrels per day. (DJ)
- May 18** Ecuador's Energy Minister, Rene Ortiz, announces plans to privatize all of Ecuador's downstream operations, including the sale of four refineries. State oil company Petroecuador currently operates the refineries. (DJ)

- May 20** China announces it is speeding up plans for the construction of a crude oil pipeline linking oil deposits in Kazakhstan to refineries in north and central China. The pipeline is now planned for completion in 2007. China National Petroleum Corporation has a stake in Kazakhstan's Uzen oilfield near the Caspian Sea. (DJ)
- May 21** The United Nations Security Council, in a unanimous vote, extends the "oil-for-food" program, under which Iraqi oil sales finance imports of food and medicine, for another six-month period. The resolution renews the program under its current terms, but promises a review of the program's \$5.26 billion cap on exports if Iraq reaches the ceiling. (DJ)
- May 21** Venezuelan President Hugo Chavez states that a sharp increase in oil prices is not desirable. "If the price of a Venezuelan oil basket hovers around \$13 to \$14 per barrel, I will be happy," Chavez says. (DJ)
- May 24** Iraqi oil officials state that, despite a lack of spare parts, Iraq is capable of boosting output from its northern oil fields to 1.2 million barrels per day during the proposed sixth phase of the "oil-for-food" deal with the United Nations, from around 0.8 million barrels per day in the fifth phase. (DJ)
- May 25** Russian Prime Minister Sergei Stepashin signs a government decree doubling the tariff on oil exports to 5 euros (EUR) per metric ton. Earlier this year, the Russian government set out a schedule of tariffs based on export prices for Russian oil. The EUR 5 per ton tariff takes effect when the price of Russian oil rises above \$12 a barrel. (DJ)
- May 27** Exxon and Mobil shareholders approve an \$81.2 billion merger, in which Exxon will issue 1.32 shares for each share of Mobil's approximately 780.2 million shares outstanding. The merger still must receive regulatory approval from the U.S. government and the European Union. The chairmen of both companies state that they expect regulatory approvals to be obtained by the end of the third quarter of 1999. (DJ)
- June 1** Sudan starts pumping oil through its pipeline linking the Heglig oil field in Western Kordofan province to Port Sudan on the Red Sea. The pipeline has a capacity of 250,000 barrels per day, and was financed by a consortium of Chinese, Malaysian, Canadian, and Sudanese firms. (DJ)
- June 2** Texaco terminates negotiations on the potential acquisition of the company by Chevron. Texaco states that Chevron's final proposal is "unacceptable" for reasons of complexity, feasibility, risk, and price. The talks had taken place as part of an overall trend toward consolidation among the major oil companies. (WSJ)
- June 6** China National Petroleum Corporation (CNPC) announces plans to lay off 75,000 workers at five of its major refineries in northern China, reducing employment by 30 percent overall and 50 percent among managerial and administrative staff. The layoffs are part of CNPC's plan to make the refineries profitable by the end of 1999. (DJ)
- June 7** Indonesia holds its first-ever free elections. While there were minor irregularities, foreign election observers considered the elections generally free and fair. Forty-eight parties fielded candidates for the Parliament. Early returns show that no party will have a majority, so a coalition government will have to be formed. (DJ)
- June 9** A team of United Nations experts visits Iraq for talks with Iraqi Oil Ministry officials on purchases of equipment and supplies to repair Iraq's oil infrastructure. Iraq is allowed to spend up to \$300 million on oil infrastructure repairs under the "oil-for-food" program's current six-month cycle. (DJ)
- June 10** BP Amoco announces its intention to sell several of its Canadian oilfields, accounting for about 30 percent of the company's overall production in Canada. The sales are to be completed in the third and fourth quarters of 1999, and resulted from a strategic review by the company of its properties worldwide to prioritize the demand for investment capital. (DJ)
- June 12** Security forces in Chechnya, a breakaway province of Russia, take control of the main oil pipeline from Baku, Azerbaijan, to the Russian Black Sea port of Novorossisk. The action follows attacks on the pipeline by renegade Chechen fighters. (DJ)
- June 14** The main Venezuelan oil workers union, Fedepetrol, states that it will not strike in the immediate future, as talks continue with Petroleos de Venezuela on its demands for wage increases. Venezuelan President Hugo Chavez had intervened in the negotiations, offering merit-based raises of between 3 percent and 6 percent to workers. (DJ)

- June 16** Brazil begins a two-day auction of 27 oil exploration blocks. The auction effectively ends the monopoly of the state-owned oil firm Petrobras over exploration and production in Brazil. Most of the blocks offered are deepwater offshore blocks, for which Brazil needs to raise foreign capital to speed development. (WSJ)
- June 18** Texaco shuts down six oil platforms off the coast of Nigeria, cutting off a total of 50,000 barrels per day of production. Two of the platforms had been boarded by protesters in boats. Shell also is experiencing disruptions in Nigeria as a result of widespread civil unrest in the Niger Delta region. (DJ)
- June 24** Spain's Repsol announces the success of its buyout offer for YPF of Argentina. Repsol paid \$13.5 billion for the outstanding 85 percent of YPF shares. (DJ)
- June 24** Citing a lack of funds, the Jordanian government announces that it has shelved plans for construction of an oil pipeline from Iraq to Jordan. Jordan currently relies on a fleet of trucks to transport approximately 90,000 barrels per day of crude oil and refined petroleum products from Iraq. (DJ)
- June 25** The Yugoslav state-run petroleum company states that it can't provide enough petroleum products to satisfy demand due to damage from NATO air strikes that has not yet been repaired. Direct losses from the air campaign are estimated at \$1.1 billion, mostly damage to refinery and storage facilities at Novi Sad and Pancevo. (DJ)
- June 26** Petroleum Development Oman, Limited announces the discovery of new oil deposits in commercial quantities in southern Oman. The new find is described as the most significant find in Oman in the last five years. (DJ)
- June 28** Russian oil firm Transneft announces that it will begin moving crude oil from Baku in Azerbaijan to the Russian Black Sea port of Novorossisk by rail, temporarily bypassing the troubled pipeline through the province of Chechnya. (DJ)
- June 29** Brazil's Petrobras and Venezuela's Petroleos de Venezuela sign a letter of intent on forging a strategic alliance between the two firms. The agreement's stated aim is to be "the starting point to establish the economic viability of a joint company, which will be called Petroamerica." (DJ)
- June 30** The Independent Petroleum Association of America issued a statement declaring its intention to join as an "interested party" in the anti-dumping complaint filed by Save Domestic Oil, Incorporated. The complaint accuses Saudi Arabia, Iraq, Mexico, and Venezuela of dumping cheap oil on the U.S. market from the second quarter of 1998 through the first quarter of 1999. (DJ)
- July 3** The Gulf Cooperation Council decides, at a meeting of foreign ministers, to establish a joint panel to represent the United Arab Emirates (UAE) in its territorial dispute with Iran over the islands of Abu Musa and the Tunbs. The move comes in response to tensions between Saudi Arabia and the UAE over Saudi Arabia's improving ties with Iran. (DJ)
- July 5** The Franco-Belgian oil company Total Fina makes a hostile takeover bid for the French oil firm Elf Aquitaine. Elf Aquitaine shareholders are offered a 4-for-3 swap of Elf Aquitaine shares for Total Fina shares, for a total value of \$43 billion. While Elf Aquitaine was privatized in 1994, the deal would still require the approval of the French government, which retains a "golden share" in Elf Aquitaine permitting it to block a takeover. (DJ) (NYT) (WP)
- July 6** Ehud Barak is sworn in as Prime Minister of Israel after a vote in the Knesset approving his government. Barak has promised to accelerate peace negotiations with Syria, Lebanon, and the Palestinians, which are considered a key factor in promoting stability in the Middle East. (DJ)
- July 7** The United Kingdom restores full diplomatic relations with Libya. Ties were severed between the two governments in 1984, after the killing of a British policewoman by a shot fired from the Libyan embassy. Meanwhile, the United States again restates its opposition to the immediate permanent lifting of United Nations sanctions against Libya. The air travel and arms embargoes were suspended on April 5, 1999, after Libya handed over two suspects in the 1989 Lockerbie bombing for trial in the Netherlands. (DJ)
- July 7** Phillips Petroleum announces the discovery of oil and gas in its Bohai Bay block 11/05 off the coast of southern China. The company intends to drill five more test wells in the near future, in addition to the two initial wells, which are capable of producing 3,000 to 5,000 barrels per day of crude oil. Phillips expects the drilling costs to be low, as water and reservoir depths are shallow. Analysts have estimated the reserves at 150 million barrels, but see it as a more significant development, as it may suggest that other, larger oil-bearing structures exist under the Bohai Bay. The

- China National Offshore Oil Company holds an option to buy a 51 percent interest in any development of the field. (DJ)
- July 7** The Nigerian government announces the cancellation of 16 crude oil prospecting licenses, following an investigation by a panel probing awards of contracts by the previous military government. The canceled licenses were held by Nigerian firms, although some of the firms had foreign technical partners. Earlier in July, the Nigerian National Petroleum Corporation had revoked contracts previously awarded to foreign firms for crude oil lifting and refinery maintenance. The cancellations are effective in September 1999, at which time the government will conduct a review of the contracts. (DJ)
- July 9** Shell declares *force majeure* on all outstanding loadings of Bonny Light and Forcados crude oil from its facilities in Nigeria. The statement cites disruptions due to civil unrest by local residents demanding that the Niger Delta region receive a greater share of Nigeria's oil proceeds. (DJ)
- July 9** The United Nations Security Council issues a statement on Libya's handover of the two suspects wanted in the 1989 bombing of a Pan Am airliner over Lockerbie, Scotland, welcoming "significant progress" in Libyan compliance with earlier resolutions, but calling on Libya to "implement further" the remaining provisions of the resolutions dealing with compensation for the victims' families and cooperation with court proceedings in The Hague. The statement is issued after a resolution proposed by Namibia to lift the air travel and arms embargoes permanently was dropped under the threat of a United States veto. United Nations sanctions were suspended shortly after Libya handed over the two suspects. (DJ)
- July 11** Iran nominates its member of OPEC's Board of Governors, Hossein Ardebili, for the position of OPEC Secretary General. Ardebili ran unsuccessfully for Secretary General in 1994. Iran also states its support for the holding of an OPEC summit meeting in Caracas in 2000. (DJ)
- July 12** The United Nations Compensation Commission, charged with assessing Iraq's liability for damages resulting from the August 1990 invasion of Kuwait, issues a judgement of liability for \$2.8 billion dollars to oil companies and oilfield service providers whose operations were disrupted. The largest share, \$2.2 billion, is to go to the Kuwaiti Oil Company. American firms that are owed payments include Saudi Arabian Texaco, a subsidiary of Texaco, National-Oilwell, OGE Drilling Company, and the Halliburton Company. (DJ)
- July 12** BP Amoco reports a major natural gas find at Shah Deniz in Caspian Sea waters off Azerbaijan. The find could complicate plans to export natural gas from Turkmenistan to Turkey and Europe, if sufficient reserves are available without the expense of building an undersea pipeline across the Caspian. (DJ) (WSJ)
- July 12** President Mohammad Khatami of Iran calls for an end to student demonstrations in Tehran, which have entered their sixth day amid increasing violence. Reformist elements in Iran fear that the demonstrations will be used by hard liners to derail reform. (WSJ)
- July 13** Schlumberger announces that it has agreed to spin off its offshore drilling operation, Sedco Forex, and merge it with Transocean Offshore, in a deal which will create the world's largest offshore drilling company. The merged company will be called Transocean Sedco Forex. Both companies said the spinoff was in response to the increasing costs and technological demands of offshore drilling, which is taking place in deeper waters than in previous years. (NYT)
- July 15** BP Amoco and Mobil announce the discovery of new crude oil reserves of approximately one billion barrels at the Crazy Horse deepwater field south of Louisiana in the Gulf of Mexico. BP Amoco is the operator, and holds 75 percent equity, with the remaining 25 percent held by Mobil. (DJ)
- July 15** Over 300 independent operators of Shell gas stations in Texas file suit against Shell Oil Company, accusing the firm along with refining companies Motiva Enterprises and Equilon Enterprises of using their dominant position in the marketplace to prevent independent operators from making a profit. According to the independent operators, Shell engaged in price discrimination, charging independent operators more than is charged to company-owned stations. A similar, but much smaller, lawsuit in Michigan resulted in a \$2.4 million judgement against Sun Oil Company in favor of two independent dealers in December 1998. (DJ)
- July 16** BP Amoco announces that it intends to sell some \$10 billion worth of assets and spend as much as \$26 billion as part of a broad three-year initiative to finish the integration of British Petroleum and Amoco. Included in the sales will be \$3 billion worth of refining assets, with the Alliance Refinery in Louisiana the first to be sold. (WSJ) (NYT)

- July 18** Elf Aquitaine launches a takeover bid for Total Fina, offering 190 euros (the European Union common currency) and three shares of Elf Aquitaine for every five shares of Total Fina. The offer follows by two weeks a hostile takeover bid for Elf Aquitaine by Total Fina, which is awaiting approval by French securities regulators. (DJ)
- July 23** Russia raises the export duty on crude oil by 5 euros per ton. The action comes amid a rash of petroleum product shortages in various regions of Russia, due largely to the rise in world crude oil prices, which makes it more lucrative for Russian oil companies to export their crude oil rather than refine and distribute petroleum products in Russia. (DJ)
- July 26** Venezuelan President Hugo Chavez' "Patriotic Pole" coalition sweeps elections for the new constitutional assembly, giving coalition members 119 of the 128 seats contested. The assembly is scheduled to convene in August 1999, and will have six months in which to draft a new constitution. (DJ)
- July 27** An advisory panel of the Environmental Protection Agency (EPA) releases a report urging a substantial reduction in the use of methyl-tertiary-butyl-ether (MTBE) as an air-pollution fighting fuel additive, due to concerns about pollution of groundwater by MTBE. MTBE is the major oxygenate which refiners began adding to gasoline as lead-based additives were phased out in the 1970's. (WSJ)
- July 28** Italy's ENI announces that it has reached final agreements to invest \$5.5 billion in oil and gas development in Libya. The projects to be funded will include a 372-mile pipeline that will carry Libyan natural gas to consumers in Sicily. (WSJ)
- Aug. 4** The Russian Fuel and Energy Ministry orders Russian oil companies to sell all of their gasoline on the domestic market for the month of August 1999, due to domestic shortages. Russian refiners are also required to supply at least 70 percent of their diesel and fuel oil output to domestic customers during August. (DJ)
- Aug. 4** Mexico and Venezuela ratify the San Jose oil agreement, which provides for sales of crude oil to 11 Central American and Caribbean countries at discounted prices. When market prices for crude oil are below \$15 per barrel, recipient states pay the market price. If prices rise above \$15 per barrel, the excess is rebated to the beneficiaries as credits for imports of other products from the two oil-producing states. (DJ)
- Aug. 5** Canadian Natural Resources and Penn West Petroleum make agreements for the purchase of British Petroleum-Amoco (BP Amoco) oil and gas production assets in Canada. Canadian Natural Resources will acquire the Bonnyville, Wabasca, and Nipisi properties for \$1.06 billion, while Penn West Petroleum will acquire the Drayton Valley and Hoosier fields for \$540 million. (DJ) (WSJ)
- Aug. 6** The New York Mercantile Exchange (Nymex) makes an offer for the purchase of up to 70 percent of London's International Petroleum Exchange (IPE). A similar offer from a group of energy companies failed to win the required 75 percent approval of IPE's members last month. (DJ)
- Aug. 9** The United States Department of Commerce dismisses a petition filed by Save Domestic Oil, Inc. under anti-dumping statutes. The petition alleged that Saudi Arabia, Venezuela, Mexico, and Iraq had sold crude oil to the United States at artificially low prices. The decision was based on the Department of Commerce's determination that "opposition to the petitions exceeded support." Majority support is defined as petitioner representation of at least 25 percent of the domestic industry and support from at least 50 percent of the industry expressing an opinion. Support from a majority in the affected industry is necessary under the law for Commerce to commence a formal investigation of an anti-dumping complaint. (DJ) (WP) (NYT)
- Aug. 10** British Petroleum-Amoco (BP Amoco) announces that it will have laid off 14,500 employees by the end of 1999 as part of its drive to cut costs. BP Amoco expects merger-related cost savings of \$4 billion by 2001. (DJ)
- Aug. 11** Chevron and Royal Dutch Shell sign an agreement with Benin, Togo, Ghana, and Nigeria to develop the West Africa Gas Pipeline. The \$400 million project is scheduled for completion in 2002. (WSJ)
- Aug. 13** Texaco announces that it has shut in 50,000 barrels per day of production in Nigeria in response to civil unrest in the Niger Delta, which has prevented the company from delivering supplies to five of its offshore platforms. (DJ)
- Aug. 13** The board of directors of Norway's state-owned oil firm Statoil formally recommends to the Oil Ministry that the firm be partially privatized. (DJ)

- Aug. 16** United States Secretary of Energy Bill Richardson holds talks with Turkish President Suleiman Demirel on proposed oil and gas pipelines that would cross Turkish territory and terminate at the Turkish port of Ceyhan. (DJ)
- Aug. 17** A major earthquake hits northwest Turkey, with its epicenter near the state-owned Tupras refinery. The resulting fire at the refinery causes damage that is expected to keep the 252,000-barrel-per-day facility idle for approximately 4 months. (DJ)
- Aug. 18** Venezuela's Supreme Court rules in favor of several foreign oil companies in a longstanding dispute. At issue was the constitutionality of contract clauses involving exemptions from local taxes, arbitration of disputes, and subcontracting exploration projects. The clauses were challenged on constitutional grounds by current oil minister Ali Rodriguez, when he was serving as a senator in 1995, following the decision of a previous government to open Venezuela's oil sector to foreign investment. (DJ)
- Aug. 18** French securities regulators extend the closing date for Elf Aquitaine's hostile takeover bid for TotalFina, in response to delays as a result of litigation over the regulators' earlier approval of the Elf Aquitaine offer. Elf Aquitaine and TotalFina are both currently engaged in competing hostile takeover bids for each other. (DJ)
- Aug. 19** United States Secretary of Energy Bill Richardson visits Turkmenistan for talks on a proposed pipeline to carry Turkmen gas across the Caspian Sea, Azerbaijan, and Georgia to Turkey. (DJ)
- Aug. 20** Indonesia's Minister of Mines and Energy, Kuntoro Mangkusubroto, announces that Indonesia's state oil firm, Pertamina, will have two years to restructure itself into an independent company. For five years afterward, Pertamina will have exclusive rights to production in certain designated zones. The change in policy is expected to open the Indonesian oil sector to increased competition. Pertamina has been shaken by a recent audit report from Price Waterhouse that found the company lost \$6.1 billion between 1996 and 1998 due to poor management practices. (DJ)
- Aug. 23** Alaska Governor Tony Knowles gives a speech outlining the State of Alaska's terms for approving the proposed merger between British Petroleum-Amoco (BP Amoco) and Atlantic Richfield Company (ARCO), stressing that continued competition should be a priority. Governor Knowles' administration has been concerned that the merger will have a negative effect on the State's economy. The two companies combined account for 72 percent of Alaska's oil revenue. (DJ)
- Aug. 24** Negotiators for the governments of Turkey and Azerbaijan begin two days of meetings in Washington on financing for the proposed oil export pipeline from Baku in Azerbaijan to Ceyhan on the Mediterranean coast of Turkey. The two delegations were to meet with the Overseas Private Investment Corporation (OPIC), the Export-Import Bank (Eximbank), and the World Bank. (DJ)
- Aug. 27** The Russian oil ministry announces that the export duty for crude oil will be doubled, effective October 1, 1999, to 10 Euros (EUR) per metric ton. The move follows a shortage of petroleum products on the domestic Russian market. (DJ)
- Aug. 28** Oil ministers from Mexico, Saudi Arabia, and Venezuela announce in a joint statement that they will continue to adhere to the oil production cuts which were agreed to in March 1999, and which are scheduled to remain in effect through March 2000. (DJ)
- Aug. 31** Venezuelan President Hugo Chavez names Hector Ciavaldini as the new president of the state-owned oil monopoly, Petroleos de Venezuela. Ciavaldini replaces Roberto Mandini, who abruptly resigned the previous day. Mandini's resignation reportedly came as a result of policy disagreements with the Chavez administration, which has reversed the previous government's policy of investing in increased oil production capacity in order to secure greater market share. (DJ)
- Sep. 1** China National Petroleum Corporation announces plans to inaugurate a holding company, which will seek to have its shares listed on the New York Stock Exchange. An initial public offering of its stock is expected to attract \$10 billion. (DJ)
- Sep. 7** Indonesia's minister of energy and mines Kuntoro Mangkusubroto states that Indonesia intends to abrogate the treaty with Australia on joint development of oil and gas resources in the Timor Gap, between East Timor and the north coast of Australia. The issue of revenue sharing with Australia will be left for the new East Timorese government. (DJ)

- Sep. 7** Lawyers representing Save Domestic Oil, Inc. file an appeal with the Court of International Trade in New York, seeking a reversal of the Department of Commerce dismissal of their anti-dumping complaint against four foreign oil producing countries. Save Domestic Oil is taking issue with the method used by the Department of Commerce to determine whether the petition had sufficient industry support to begin an investigation. (DJ)
- Sep. 10** Chevron agrees to pay \$95 million to settle allegations that it systematically underpaid royalties for crude oil produced from federal government lands. The settlement stemmed from a suit brought by two industry whistleblowers under the False Claims Act against a total of 18 firms which produce crude oil from federal lands. (DJ)
- Sep. 10** Creditors of the Russian oil company Sidanco agree to liquidate the company, dealing a blow to BP Amoco's efforts to keep Sidanco, in which it owns a 10 percent stake, united. BP Amoco alleges that the procedure used to make the decision to liquidate Sidanco was influenced by manipulation of the register of creditors by Sidanco's Russian rivals. (DJ) (WSJ) (NYT)
- Sep. 14** French oil companies Total Fina and Elf Aquitaine agree to merge, after a lengthy takeover battle, in a deal which will form the world's fourth largest oil company. The deal will give Elf Aquitaine shareholders 19 shares of Total Fina for every 13 shares of Elf Aquitaine. According to Total Fina's management, the merger will result in annual cost savings for the combined firm of \$1.56 billion. (WP) (WSJ)
- Sep. 18** Russian forces begin air and artillery attacks against suspected guerrilla bases and infrastructure targets, including the Grozny refinery complex, in the breakaway region of Chechnya. The strikes come in the wake of a series of attacks by militants operating from Chechnya on the neighboring Russian region of Dagestan. Chechnya is along the route of the Baku-Novorossisk crude oil pipeline, which has been closed during most of 1999 due to attacks. (DJ)
- Sep. 20** Texaco announces the lifting of the state of *force majeure* it had declared August 13th on liftings of crude oil from the company's operations in Nigeria. Production had been shut in due to civil unrest in neighboring communities. (DJ)
- Sep. 21** Brazil's state oil company, Petroleo Brasileiro S.A., announces the discovery of crude oil reserves in the Santos Basin estimated at between 600 million and 700 million barrels. The Santos Basin is located offshore from Rio de Janeiro state. (DJ)
- Sep. 21** Senator Charles Schumer sends a letter to President Clinton and Secretary of Energy Bill Richardson requesting them to authorize the sale of crude oil from the Strategic Petroleum Reserve in response to rising oil prices. Senator Schumer's letter coincided with the ministerial meeting of the Organization of Petroleum Exporting Countries in Vienna. (DJ)
- Sep. 22** The Organization of Petroleum Exporting Countries (OPEC), at a meeting of its member states' oil ministers, decides to maintain current production cuts until March 2000, despite the fact the crude oil prices have doubled since early 1999. In another development, OPEC announces that its current Secretary General, Nigerian Rilwanu Lukman, will stay in office until March 2000. The announcement follows a vigorously contested race to succeed Lukman in the post, in which OPEC's three largest members, Saudi Arabia, Iran, and Iraq, had fielded candidates. (DJ)
- Sep. 23** British Petroleum Exploration (Alaska), a subsidiary of BP Amoco, pleads guilty to a felony charge of illegally dumping hazardous waste on Alaska's North Slope. The company agreed to a \$22 million settlement to resolve the charges. (DJ)
- Sep. 23** In a joint statement, the foreign ministers of the five permanent members of the United Nations Security Council pledge to continue to work toward a consensus on a new policy toward Iraq. All five permanent members have accepted that on-site weapons inspections must resume in Iraq, though there is still disagreement over how much cooperation Iraq would have to give international inspectors before economic sanctions could be lifted. (DJ)
- Sep. 23** The Senate approves a proposal to block the Clinton administration from increasing royalties on oil and gas from federal lands. The Department of the Interior has proposed a rule change that would tie royalties to market prices for crude oil. (WP) (NYT)
- Sep. 24** China National Petroleum Corporation (CNPC) and Royal Dutch Shell sign a contract for the joint exploration and development of natural gas resources in northwest China's Ordos Basin. The \$3-billion contract includes the development of the Changbei Block, where CNPC has found natural gas reserves estimated at 2.5 trillion cubic feet. Shell, as the operator, will cover the investment required to develop the field. (DJ)

- Sep. 24** Italian Prime Minister Massimo D'Alema says he will evaluate the possibility of the Italian state-owned oil company ENI SpA merging with Total Fina and Elf Aquitaine once the latter two firms' merger is completed. (DJ)
- Sep. 28** Iranian Oil Minister Bijan Zanganeh announces that the National Iranian Oil Company has discovered a new oilfield, Azadegan, with 26 billion barrels of crude oil in Khuzestan province. The discovery is the largest new find in Iran in the last three decades. Zanganeh expects the field to produce between 300,000 and 400,000 barrels per day of crude oil three to four years after development begins next year. (DJ)
- Oct. 4** The United Nations Security Council agrees to raise the monetary ceiling on Iraqi oil sales to \$8.3 billion from \$5.26 billion, guaranteeing the continuation of Iraqi production until the November 20 end date for the current six-month extension of the "oil-for-food" program. The move is a one time adjustment, and does not bind the Security Council to continue a higher ceiling if the program is renewed for another six month term. The increase reflects the difference between previous monetary ceilings and actual Iraqi sales during previous phases of the program. (DJ)
- Oct. 6** Exxon announces the commencement of production at the Balder field located in the Norwegian zone of the North Sea. The field is expected to reach a peak output of 100,000 barrels per day. (DJ)
- Oct. 7** Brazilian state oil company Petrobras announces that it has broken off negotiations with Exxon for the development of the Albacora Leste offshore field. Petrobras is considering asking one of the other consortium partners to take over Exxon's stake and become the operator at the field, which is estimated to hold 600 million barrels of crude oil. (DJ)
- Oct. 8** A spokesman for the Norwegian Oil and Energy Ministry announces that the Norwegian government is seeking to increase the country's crude oil production in 2000 by 20 percent, to roughly 3.5 million barrels per day. According to the spokesman, if Norway were to decide to extend its 200,000-barrel-per-day production cut undertaken in support of the Organization of Petroleum Exporting Countries' (OPEC) March 1999 agreement, it would be subtracted from the new baseline amount of 3.5 million barrels per day. (DJ)
- Oct. 8** Rem Vyakhirev, the chief executive of Russia's Gazprom, the world's largest producer and exporter of natural gas, announces his intention to attempt to forge a natural gas cartel in response to low prices in the European market. Other major exporters of natural gas to European countries include Algeria, the Netherlands, and Norway. (WSJ)
- Oct. 10** Two major Japanese downstream oil firms, Cosmo Oil and Nippon Mitsubishi Oil, announce a strategic alliance. While the move is short of a merger, it is expected to result in cost reductions for both firms by eliminating duplicate operations. The action follows a period of low refining margins and excess refinery capacity in the Japanese oil industry. (DJ)
- Oct. 10** The French government announces its intention to retain its "golden share" in the merged Total Fina-Elf Aquitaine. The "golden share" allows the French government the right to block any merger plans or takeover attempt involving the company. (DJ)
- Oct. 11** The Venezuelan newspaper *El Nacional* reports that the final draft of the new Venezuelan constitution includes a provision prohibiting privatization of the state-owned oil firm Petroleos de Venezuela (PdVSA). A referendum on the proposed new constitution is scheduled to take place before the end of 1999. (DJ)
- Oct. 13** Pakistan's military stages a coup, led by General Pervez Musharraf. According to a statement from Atlantic Richfield, the largest producer of oil in Pakistan, their operations are not expected to be affected. (DJ)
- Oct. 13** U.S. House and Senate conferees agree on a six-month moratorium on increases in oil royalty payments from firms lifting oil from federally owned land. The moratorium has been opposed by the Clinton administration. (DJ)
- Oct. 19** BP Amoco announces its decision to take the lead in promoting the construction of an oil export pipeline from Baku on the Caspian Sea to the Turkish Mediterranean port of Ceyhan. The company's support is seen as crucial, as it holds the largest stake in the Azerbaijan International Operating Company (AIOC), a consortium of foreign oil firms which will develop Azerbaijani reserves. (WSJ)
- Oct. 20** Saudi Oil Minister Ali Naimi says the Saudi government is still evaluating proposals submitted by foreign oil companies for investment in Saudi Arabia. He stresses the need to consider projects which "compliment the domestic industry, not replace it," such as petrochemical plants. (DJ)

- Oct. 20** The Colombian government announces new measures to preserve the country's oil production level into the future. Companies holding concessions will be allowed to return unused portions of blocks back to the government, in exchange for an increased share of production in the portion they retain. The government also intends to solicit bids from foreign firms for some blocks currently operated by state-owned Ecopetrol. (DJ)
- Oct. 25** The Federal Trade Commission approves the \$6 billion merger between Sonat and El Paso Energy, which will create the largest natural gas pipeline company in the United States. The merged firm will be required to divest assets in some local markets to preserve competition. (DJ)
- Oct. 28** The United Nations Security Council shelve a proposal to allow Iraq to double the amount, currently \$300 million, it is allowed to spend under the "oil-for-food" program on spare parts for its oil industry. The issue of funding for repairs and improvements to Iraq's upstream oil infrastructure will now be considered when the next six-month renewal of the "oil-for-food" program is considered. (NYT)
- Oct. 28** China National Petroleum Corporation (CNPC) announces the formation of a holding company, for which it intends to sell shares in an initial public offering (IPO) on the New York and Hong Kong stock exchanges to be scheduled in either January or February 2000. Earlier in the month, the China National Offshore Oil Corporation (CNOOC) had announced the postponement of a similar IPO due to adverse market conditions. (DJ)
- Oct. 29** Oklahoma Secretary of Energy Carl Michael Smith sends a letter to U.S. Secretary of Energy Bill Richardson urging him to resist calls for a sale of crude oil from the Strategic Petroleum Reserve (SPR). Smith argues that a sale of SPR oil would damage the recovery of U.S. domestic oil producers in the wake of low oil prices in 1998 and early 1999. (DJ)
- Oct. 31** Isramco, an Israeli oil and gas exploration company, reports a discovery of natural gas in commercial quantities from an offshore test well in the Mediterranean. Previously, exploration in Israel had not discovered oil or gas in commercial quantities. (DJ)
- Nov. 1** The Russian government sells a 9 percent stake in Russia's largest oil company, Lukoil, to a Cyprus-based firm, Reforma Investment. The Russian government had previously held a 27 percent stake in Lukoil. (WSJ)
- Nov. 1** Atlantic Richfield and Triton Energy conclude a \$5 billion agreement with the state-run oil companies of Thailand and Malaysia to sell natural gas from blocks jointly held by the two firms in the Gulf of Thailand. Deliveries of 390 million cubic feet per day are set to begin in 2002. (WSJ)
- Nov. 4** China and Germany sign a memorandum of understanding for the construction of a \$2.7 billion petrochemical complex in China. The project will be a joint venture between China's state-owned petroleum firm Sinopec and BASF of Germany. The deal was signed during a visit to China by German Prime Minister Gerhard Schroeder. (DJ)
- Nov. 6** China National Petroleum Corporation (CNPC) announces that it will be undertaking a reorganization of its corporate structure. The company's exploration, production, gas, refining, and petrochemical units will be transferred to a holding company. Its technical services and overseas operations units will remain outside the holding company. CNPC officials intend to offer shares in the holding company on the New York Stock Exchange in January or February 2000. (DJ)
- Nov. 10** Alberto Calderon is appointed to head the Colombian state petroleum company, Ecopetrol, after the resignation of its previous president Carlos Rodado. (DJ)
- Nov. 14** Royal Dutch Shell signs an \$800 million development contract with the National Iranian Oil Company (NIOC) for two offshore fields in the Iranian sector of the Persian Gulf. The contract calls for an expansion in production at the Soroush field to 150,000 barrels per day and at the Nowruz field to 90,000 barrels per day. Under the "buy back" contract, Royal Dutch Shell will not have an ownership interest in the fields, but will recoup its investment plus a fixed rate of return. The move raises the possibility of United States sanctions under the Iran-Libya Sanctions Act (ILSA), which prohibits investment of more than \$40 million per year by foreign companies in Iran's oil industry. (DJ)
- Nov. 15** The United States and China conclude an agreement on Chinese entry into the World Trade Organization (WTO). Under the agreement, China will make a limited opening of its internal petroleum products market to foreign competition, allowing foreign firms to open 30 retail gas stations every three years after China's accession to the WTO. China also will abolish the existing oil import quota system in phases over four years. (DJ)

- Nov. 17** California governor Gray Davis announces a lawsuit by the State of California against the federal government in an attempt to block extensions of offshore oil leases that eventually could expand oil production off the central California coast. California is demanding the right to scrutinize each of the 36 blocks prior to any federal government action. The move comes four days after the Department of the Interior unveiled a plan that allows oil companies to move forward with exploration in the areas. (LAT)
- Nov. 18** The heads of state of Turkey, Azerbaijan, and Georgia sign an agreement to build a pipeline for the export of crude oil from the Caspian Basin. The 1,080-mile pipeline will begin at the Azerbaijani capital, Baku, and run through Georgia and Turkey to the Turkish port of Ceyhan. The project is expected to cost \$2.4 billion, and the government of Turkey has offered guarantees that the cost of the Turkish segment of the pipeline will not exceed \$1.4 billion. The signing ceremony took place during a visit to Istanbul by U.S. President Clinton for a summit of the Organization for Cooperation and Security in Europe (OSCE). (WP) (NYT)
- Nov. 20** Iraq announces its rejection of the United Nations Security Council's two-week extension of the "oil-for-food" program, under which Iraq is permitted to make limited oil exports. The rejection produces a cutoff in Iraqi oil exports, which Iraq said was ordered to protest the failure of the Security Council to grant a six-month extension. Many analysts see the Iraqi move as coming at a particularly inopportune time for oil consumers, as world oil stocks have been falling in recent months. (DJ) (NYT) (WSJ)
- Nov. 25** The National Iranian Oil Company (NIOC) defers loadings of approximately 18 million barrels of crude oil exports scheduled for late November and early December, resulting in delays of as much as 11 days for some buyers. The deferment comes in response to an order from Iranian Oil Minister Bijan Zanganeh for strict control of exports to ensure compliance with Iran's OPEC production quota. (DJ)
- Nov. 27** Iraqi Oil Minister Amer Mohammed Rashid states that Iraq is willing to accept a six-month extension of the United Nations "oil-for-food" program. He also urges other OPEC members not to raise output in response to Iraq's temporary halt in crude oil exports. (DJ)
- Nov. 30** A spokesman for the Chinese Foreign Ministry states that if the dispute among several Asian countries over the potentially hydrocarbon-rich Spratly Islands cannot be resolved, China would consider the idea of joint development of the Islands with other claimants. However, the spokesman also reiterated China's claim to the islands. (DJ)
- Nov. 30** The Federal Trade Commission (FTC) grants approval for the proposed merger between oil giants Exxon and Mobil. The \$80 billion merger was approved by the FTC after the firms agreed to the largest divestiture of assets ever involved in a merger. The companies will sell over 2,400 retail outlets, mostly in the Northeast, Texas, and California, and a refinery in California. (DJ)
- Dec. 2** Independent refiner Tosco agrees to buy 1,740 gasoline stations from Exxon and Mobil in the Northeastern United States. The \$840 million sale was one of the measures the Federal Trade Commission required to preserve adequate competition in the wake of the Exxon-Mobil merger. (WSJ)
- Dec. 2** BP Amoco wins approval from the State of Alaska for its planned takeover of Atlantic Richfield (ARCO). The Federal Trade Commission is still considering the matter. (DJ)
- Dec. 4** Iraq's Minister of Petroleum, Amer Rashid Mohammed, states Iraq's rejection of a one-week extension of the United Nations "oil-for-food" program approved by the Security Council a few hours earlier. (DJ)
- Dec. 10** The California Air Resources Board approves a regulatory change that will halve the amount of sulfur allowed in gasoline sold in California from 30 parts per million to 15 parts per million, starting in 2003. The California limit would be half the national limit under a new rule proposed by the Environmental Protection Agency. The current federal sulfur limit for gasoline is 330 parts per million. (WSJ)
- Dec. 10** The United Nations Security Council passes a resolution extending the "oil-for-food" program by six months, under terms identical to the previous six-month phase. Iraq had previously stated a willingness to resume oil exports if a six-month extension were to be granted. (DJ)
- Dec. 14** Adrian Lajous, the director of Mexico's state-owned oil company Petroleos Mexicanos (Pemex), resigns. The move comes in the wake of delays and large cost overruns in the \$10.5 billion Cantarell project, which seeks to increase Mexico's oil production capacity. (WSJ)

- Dec. 15** Chevron, BP Amoco, and Conoco agree to pay a total of \$153 million to settle allegations that they underpaid royalties for oil produced on federal lands. The issue stems from a 1996 lawsuit filed by two former Atlantic Richfield executives. (WSJ)
- Dec. 16** Exxon Mobil announces that it intends to cut 14,000 jobs, 13 percent of its work force, in a round of layoffs stemming from its recent merger, as part of an effort to increase cost savings to \$3.8 billion per year by 2002. (NYT) (WSJ)
- Dec. 17** Turkmenistan signs a gas sales agreement with the Russian natural gas company Gazprom. Turkmenistan agrees to accept more than fifty percent of the value of its payments from Gazprom in Russian foodstuffs and consumer goods, rather than cash. (DJ)
- Dec. 17** The United Nations Security Council passes a resolution on returning weapons inspectors to Iraq. Under the resolution, sanctions could be suspended if Iraq were to cooperate with the inspectors over a period of nine months. Iraq has stated that it does not accept the resolution. (DJ)
- Dec. 21** The Export-Import Bank drops a proposed \$500 million loan to Russia's Tyumen Oil after Secretary of State Madeleine Albright exercises her statutory authority to block the transaction. The loan had been controversial in part because of Tyumen Oil's dispute with BP Amoco over the bankruptcy of Russian oil firm Sidanco, in which BP Amoco owns a major stake. BP Amoco and Tyumen Oil later settled the dispute on December 23. (DJ)
- Dec. 21** The government of Kazakhstan signs an agreement with four foreign firms, including Texaco, for the construction of a pipeline from Bolshoy-Chagan to Atyrau, which will link into the export pipeline being developed by the Caspian Pipeline Consortium (CPC). The initial capacity of the pipeline will be 150,000 barrels per day, beginning in 2002. (DJ)
- Dec. 21** President Clinton announces the publication of final rules on sulfur content in gasoline and environmental standards for light trucks and sport utility vehicles. The new sulfur content standard of 30 parts per million will become effective in 2004. Trucks and sport utility vehicles will be under the same emissions standards as automobiles by 2009. (WP)
- Dec. 23** Amid concerns over possible consumer hoarding of petroleum products in response to fears of supply disruptions caused by the "Y2K Bug," Secretary of Energy Bill Richardson advises drivers that they do not need to fill up their gasoline tanks or otherwise hoard fuel during the rollover to the year 2000, as there is no reason to believe there will be major disruptions that would affect the availability of fuels in the United States. (DJ)
- Dec. 24** South Korea's Hyundai and Samsung sign a memorandum of understanding paving the way for the merger of their petrochemical business units. The merger comes as part of South Korea's drive to ease overcapacity in several key industries, including petrochemicals. (DJ)
- Dec. 26** Iraqi officials state that Iraq intends to export the same amount of oil during the recently begun seventh phase of the "oil-for-food" program as it had during the previous phase. Iraq's exports during the sixth phase averaged 2.1 to 2.2 million barrels per day. The country had suspended exports on November 24 to protest short extensions of the previous phase of the program, and had restarted exports in mid-December. (WSJ)
- Dec. 28** BP Amoco announces that it is withdrawing from a project to develop natural gas deposits in Ukraine, which BP Amoco said it had determined were below the minimum scale in which the company was willing to invest. BP Amoco's action will open the exploration blocks in central and eastern Ukraine to other firms, but is seen as a major blow to Ukraine's hopes of becoming less dependent on gas imports, due to the loss of BP Amoco's advanced deep-drilling technology. (NYT)
- Dec. 31** The Panama Canal Zone reverts to Panamanian sovereignty at noon, after nearly a century of American control. More than a half-million barrels of crude oil and petroleum products transit the Canal each day. (DJ)
- Dec. 31** After nearly two years of construction, Exxon Mobil completes the Sable Offshore Energy Project, a \$2 billion project to bring natural gas from fields offshore Nova Scotia to the northeastern United States. The fields are estimated to contain 3.5 trillion cubic feet of natural gas. (DJ)
- Dec. 31** Russian President Boris Yeltsin makes a surprise announcement that he is resigning immediately. Vladimir Putin becomes Acting President, and presidential elections will be held within 90 days, with a date to be set by the State Duma. Russia is the largest exporter of energy in the world. (DJ)

¹ Preliminary.

--= Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Primary energy consumption reported in this table includes petroleum, dry natural gas, coal, net hydroelectric, nuclear, geothermal, solar, wind, and wood and waste electric power, as reported in Tables E2-E7. Primary energy consumption for the United States also includes:

(1) the consumption of geothermal, solar, and wood and waste energy not used for electricity generation; (2) electricity imports from Mexico that are derived from geothermal energy; and (3) net imports of electricity derived from nonrenewable sources. Primary energy consumption for all countries, except the United States, has been adjusted to include total electricity imports and to exclude total electricity exports. This adjustment is necessary because the consumption data for electric power by type, as reported in Tables E5-E7, are not adjusted for electricity imports and exports, except for hydroelectric power in the United States.

As a result of these adjustments, primary energy consumption reported in this table might not be equal to sum of the individual fuel types reported in Tables E2-E7.

Sources: See sources at the end of Sections 3, 4, 5, and 6.

Table E2 World Petroleum Consumption (Btu), 1990 - 1999
(Quadrillion (10¹⁵) Btu)

¹ Preliminary.

² United States coal consumption is from Energy Information Administration, Annual Energy Review 1999, table 1.3. It is the sum of coal and coal coke net imports from table 1.3.

-- Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Coal includes anthracite, subanthracite, bituminous, subbituminous, lignite, and brown coal.

Sources: See sources at the end of Section 5.

¹ Preliminary.

² Includes hydroelectric pumped storage.

--= Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Data are reported as net consumption as opposed to gross. Net consumption excludes the energy consumed by the generating units.

Consumption accounts for thermal equivalent conversion losses.

Sources: See sources at the end of Section 6.

¹ Preliminary.

--= Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Data are reported as net consumption as opposed to gross. Net consumption excludes the energy consumed by the generating units.

Consumption accounts for thermal equivalent conversion losses.

Sources: See sources at the end of Section 6.

¹ Preliminary.

-- Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Primary energy production reported in this table includes petroleum (crude oil and natural gas plant liquids), dry natural gas, and coal, and net hydroelectric, nuclear, geothermal, solar, wind, and wood and waste electric power generation.

Primary energy production for the United States also includes the production of geothermal, solar, and wood and waste energy not used for electricity generation.

As a result, primary energy production for the United States reported in this table might not be equal to sum of the individual fuel types reported in Tables F2-F8.

Sources: See sources at the end of Sections 3, 4, 5, and 6.

¹ Preliminary.

² Includes oil processed from Athabasca Tar Sands.

--- Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Crude oil includes lease condensate.

Sources: See sources at the end of Section 3.

¹ Preliminary.

--= Not applicable.

(s) = Value less than 5 trillion Btu.

Note: Sum of components may not equal total due to independent rounding.

¹ Preliminary.

² United States coal production is from Energy Information Administration, Annual Energy Review 1999, table 1.2.

--= Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Coal includes anthracite, subanthracite, bituminous, subbituminous, lignite, and brown coal.

Sources: See sources at the end of Section 5.

¹ Preliminary.

² Includes hydroelectric pumped storage.

--= Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Generation data consist of both utility and nonutility sources. Data are reported as net generation as opposed to gross. Net generation excludes the energy consumed by the generating unit and excludes generation from pumped storage.

Sources: See sources at the end of Section 6.

¹ Preliminary.

-- Not applicable.

(s) = Value less than 5 trillion Btu.

Notes: Sum of components may not equal total due to independent rounding.

Generation data consist of both utility and nonutility sources. Data are reported as net generation as opposed to gross. Net generation excludes the energy consumed by the generating unit.

No generation is reported for Middle East.

Sources: See sources at the end of Section 6.

¹ Preliminary.

--= Not applicable.

Notes: Sum of components may not equal total due to independent rounding.

Includes carbon dioxide emissions from the consumption of petroleum, natural gas, and coal, and the flaring of natural gas.

Tons of carbon equivalent can be converted to tons of carbon dioxide gas by multiplying by 3.667. One ton of carbon equivalent = 3.667 tons of carbon dioxide gas.

Source: Office of Energy Markets and End Use, Energy Information Administration.

¹ Preliminary.

--= Not applicable.

Notes: Sum of components may not equal total due to independent rounding.

Tons of carbon equivalent can be converted to tons of carbon dioxide gas by multiplying by 3.667. One ton of carbon equivalent = 3.667 tons of carbon dioxide gas.

Source: Office of Energy Markets and End Use, Energy Information Administration.

¹ Preliminary.

-- Not applicable.

Notes: Sum of components may not equal total due to independent rounding.

Tons of carbon equivalent can be converted to tons of carbon dioxide gas by multiplying by 3.667. One ton of carbon equivalent = 3.667 tons of carbon dioxide gas.

Source: Office of Energy Markets and End Use, Energy Information Administration.

¹ Preliminary.

-- Not applicable.

(s) = Value less than 5,000 metric tons.

Notes: Sum of components may not equal total due to independent rounding.

Tons of carbon equivalent can be converted to tons of carbon dioxide gas by multiplying by 3.667. One ton of carbon equivalent = 3.667 tons of carbon dioxide gas.

Source: Office of Energy Markets and End Use, Energy Information Administration.

Glossary

Glossary

Acid Rain: Also called acid precipitation or acid deposition, acid rain is precipitation containing harmful amounts of nitric and sulfuric acids formed primarily by nitrogen oxides and sulfur oxides released into the atmosphere when fossil fuels are burned. It can be wet precipitation (rain, snow, or fog) or dry precipitation (absorbed gaseous and particulate matter, aerosol particles, or dust). Acid rain has a pH below 5.6. Normal rain has a pH of 5.6, which is slightly acidic. The term pH is a measure of acidity or alkalinity and ranges from 0 to 14. A pH measurement of 7 is regarded as neutral. Measurements below 7 indicate increased acidity, while those above 7 indicate increased alkalinity.

Acquisition (Foreign Crude Oil): All transfers of ownership of foreign crude oil to a firm, irrespective of the terms of that transfer. Acquisitions thus include all purchases and exchange receipts as well as any and all foreign crude acquired under reciprocal buy-sell agreements or acquired as a result of a buy-back or other preferential agreement with a host government.

Agglomerating Character: Agglomeration describes the caking properties of coal. Agglomerating character is determined by examination and testing of the residue when a small powdered sample is heated to 950 degrees Centigrade under specified conditions. If the sample is "agglomerating," the residue will be coherent, show swelling or cell structure, and be capable of supporting a 500-gram weight without pulverizing.

Alcohol: The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The series of molecules vary in chain length and are composed of a hydrocarbon plus a hydroxyl group, $\text{CH}_3\text{-(CH}_2\text{)}_n\text{-OH}$. Included are methanol, ethanol, and tertiary butyl alcohol).

Alternating Current: An electric current that reverses its direction at regularly recurring intervals, usually 50 or 60 times per second.

Ampere: The unit of measurement of electrical current produced in a circuit of 1 volt acting through a resistance of 1 ohm.

Anaerobic Decomposition: The breakdown of molecules into simpler molecules or atoms by microorganisms that can survive in the partial or complete absence of oxygen.

Anthracite: The highest rank of coal; used primarily for residential and commercial space heating. It is a hard, brittle, and black lustrous coal, often referred to as hard coal, containing a high percentage of fixed carbon and a low percentage of volatile matter. The moisture content of fresh-mined anthracite generally is less than 15 percent. The heat content of anthracite ranges from 22 to 28 million Btu per ton on a moist, mineral-matter-free basis. The heat content of anthracite coal consumed in the U.S. averages 25 million Btu per ton, on the as-received basis (i.e., containing both inherent moisture and mineral matter). *Note:* Since the 1980's, anthracite refuse or mine waste has been used for steam electric power generation. This fuel typically has a heat content of 15 million Btu per ton or less.

Anthracite Briquets: See **Coal Briquets**.

Anthropogenic: Made or generated by a human or caused by human activity. The term is used in the context of global climate change to refer to gaseous emissions that are the result of human activities.

API: The American Petroleum Institute, a trade association.

API Gravity: An arbitrary scale expressing the gravity or density of liquid petroleum products, as established by the American Petroleum Institute (API). The measuring scale is calibrated in terms of degrees API. The higher the API gravity, the lighter the compound. Light crude oils generally exceed 38 degrees API and heavy crude oils are commonly labeled as all crude oils with an API gravity of 22 degrees or below. Intermediate crude oils fall in the range of 22 degrees to 38 degrees API gravity.

Apparent Consumption (Coal): As used here, a calculated amount equal to primary coal production plus imports of coal and coke, minus exports of coal and coke minus changes in stocks of coal and coke. *Notes:* 1) For the United States, coal consumption data are reported by major end-use sector and do not have to be calculated; 2) A net withdrawal from stocks increases consumption and a net addition to stocks decreases consumption.

Apparent Consumption (Natural Gas): As used here, a calculated amount equal to dry natural gas production, plus imports of natural gas, minus exports of natural gas, minus changes in natural gas stocks. *Note:* A net withdrawal from stocks increases consumption and a net addition to stocks decreases consumption.

Apparent Consumption (Petroleum): As used here, a calculated amount that includes domestic inland consumption, refinery fuel and loss, and international bunker fuels. Also included, where available, are liquefied petroleum gases sold directly from natural gas processing plants for fuel or chemical uses.

Apparent Consumption of Refined Petroleum Products: See **Apparent Consumption (Petroleum)**.

Ash: Impurities consisting of silica, iron, alumina, and other incombustible matter that are contained in coal. Ash increases the weight of coal, adds to the cost of handling, and can affect the burning characteristics. Ash content is measured as a percent by weight of coal on an as-received basis (i.e., containing both inherent moisture and mineral matter) or a dry (moisture-free) basis.

Asphalt: A dark brown-to-black cement-like material containing bitumens as the predominant constituent obtained by petroleum processing; used primarily for road construction. It includes crude asphalt as well as the following finished products: cements, fluxes, the asphalt content of emulsions (exclusive of water), and petroleum distillates blended with asphalt to make cutback asphalts. *Note:* The conversion factor for asphalt is 5.5 barrels per short ton.

Asphalt (Refined): See **Asphalt**.

Associated-Dissolved Natural Gas: Natural gas that occurs in crude oil reservoirs either as free gas (associated) or as a gas in solution with crude oil (dissolved gas). See **Natural Gas**.

Associated Gas: See **Associated-Dissolved Natural Gas** and **Natural Gas**.

Associated Natural Gas: See **Associated-Dissolved Natural Gas** and **Natural Gas**.

ASTM: The American Society for Testing and Materials, a trade association.

Atmospheric Crude Oil Distillation Unit: See **Distillation Unit (Atmospheric)**.

Aviation Gasoline (Finished): A complex mixture of relatively volatile hydrocarbons with or without small quantities of additives, blended to form a fuel suitable

for use in aviation reciprocating engines. Fuel specifications are provided in ASTM Specification D 910 and Military Specification MIL-G-5572. *Note:* Data on blending components are not counted in data on finished aviation gasoline. See **Jet Fuel**; **Kerosene-Type Jet Fuel**; and **Naphtha-Type Jet Fuel**.

Aviation Gasoline Blending Components: Naphthas that are used for blending or compounding gasoline into finished aviation gasoline (e.g., straight-run gasoline, alkylate, and reformate). Excluded are oxygenates (alcohols, ethers), butane, and pentanes plus.

Barrel (Petroleum): A unit of volume equal to 42 U.S. gallons.

Barrels per Calendar Day: The amount of input that a distillation facility can process under usual operating conditions. The amount is expressed in terms of capacity during a 24-hour period and reduces the maximum processing capability of all units at the facility under continuous operation (see **Barrels per Stream Day**) to account for the following limitations that may delay, interrupt, or slow down production:

1. the capability of downstream processing units to absorb the output of crude oil processing facilities of a given refinery. No reduction is necessary for intermediate streams that are distributed to other than downstream facilities as part of refinery's normal operation;
2. the types and grades of inputs to be processed;
3. the types and grades of products expected to be manufactured;
4. the environmental constraints associated with refinery operations;
5. the reduction of capacity for scheduled downtime due to such conditions as routine inspection, maintenance, repairs, and turnaround; and
6. the reduction of capacity for unscheduled downtime due to such conditions as mechanical problems, repairs, and slowdowns.

Barrels per Stream Day: The maximum number of barrels of input that a distillation facility can process within a 24-hour period when running at full capacity under optimal crude and product slate conditions with no allowance for downtime.

Biodiesel: A renewable fuel synthesized from soybeans, other oil crops, or animal tallow that can substitute for petroleum diesel fuel.

Biofuels: Liquid fuels and blending components produced from biomass (plant) feedstocks, used primarily for transportation.

Biogas: A medium Btu gas containing methane and carbon dioxide, produced from the anaerobic decomposition of organic material in a landfill. Also called biomass gas.

Biogenic: Produced by the actions of living organisms.

Biomass: Organic nonfossil material of biological origin constituting a renewable energy resource. Included in **Wood and Waste**.

Biomass Gas: See **Biogas**.

Biosphere: The portion of the Earth and its atmosphere that can support life. The part of the global carbon cycle that includes living organisms and biogenic organic matter.

Bitumen: A naturally occurring viscous mixture, mainly of hydrocarbons heavier than pentane, that may contain sulfur compounds and that, in its natural occurring viscous state, is not recoverable at a commercial rate through a well.

Bituminous Briquets: See **Coal Briquets**.

Bituminous Coal: A dense coal, usually black, sometimes dark brown, often with well-defined bands of bright and dull material, used primarily as fuel in steam-electric power generation, with substantial quantities also used for heat and power applications in manufacturing and to make coke. Bituminous coal is the most abundant coal in active U.S. mining regions. Its moisture content usually is less than 20 percent. The heat content of bituminous coal ranges from 21 to 30 million Btu per ton on a moist, mineral-matter-free basis. The heat content of bituminous coal consumed in the U.S. averages 24 million Btu per ton, on the as-received basis (i.e., containing both inherent moisture and mineral matter).

Black Liquor: A byproduct of the paper production process that can be used as a source of energy.

Boiler: A device for generating steam for power, processing, or heating purposes; or for producing hot water for heating purposes or hot water supply. Heat from an external combustion source is transmitted to a fluid contained within the tubes in the boiler shell. This

fluid is delivered to an end-use at a desired pressure, temperature, and quality.

Briquetting Plant: A facility where coal is converted into coal briquets. See **Coal Briquets**.

British Thermal Unit (Btu): See **Btu (British Thermal Unit)**.

Btu (British Thermal Unit): A standard unit for measuring the quantity of heat energy equal to the quantity of heat needed to raise the temperature of 1 pound of water by 1 degree Fahrenheit at or near 39.2 degrees Fahrenheit. The Btu is a convenient measure by which to compare the energy content of various fuels. See **Heat Content of a Quantity of Fuel, Gross** and **Heat Content of a Quantity of Fuel, Net**.

Bunker Fuel: Fuel supplied to ships and aircraft, both domestic and foreign, consisting primarily of residual and distillate fuel oil for ships and kerosene-type jet fuel for aircraft. The term "international bunker fuels" is used to denote the consumption of fuel for international transport activities. *Notes:* 1) For the purposes of greenhouse gas emissions inventories, data on emissions from combustion of international bunker fuels are subtracted from national emissions totals. However, because it was often difficult to separate out international bunker fuels, this adjustment was not made in estimating the carbon dioxide emissions that appear here. 2) Historically, bunker fuels have meant only ship fuel. See **Vessel Bunkering**.

Bunkers: See **Bunker Fuel**.

Butane: A normally gaseous straight-chain or branched-chain hydrocarbon, (C₄H₁₀). It is extracted from natural gas or refinery gas streams. It includes isobutane and normal butane and conforms to ASTM Specification D 1835 and Gas Processors Association Specifications for commercial butane.

Butylene: An olefinic hydrocarbon (C₄H₈) recovered from refinery processes.

Carbon Budget: The balance of the exchanges (incomes) and losses) of carbon between carbon sinks (e.g., atmosphere and biosphere) in the carbon cycle. See **Carbon Cycle** and **Carbon Sink**.

Carbon Cycle: All carbon sinks and exchanges of carbon from one sink to another by various chemical, physical, geological, and biological processes. See **Carbon Sink** and **Carbon Budget**.

Carbon Dioxide (CO₂): A colorless, odorless, non-poisonous gas that is a normal part of the Earth's atmosphere. Carbon dioxide is a product of fossil-fuel

combustion as well as other processes. It is considered a greenhouse gas as it traps heat (infrared energy) radiated by the Earth into the atmosphere and thereby contributes to the potential for global warming. Other greenhouse gases are measured in relation to the global warming potential (GWP) of carbon dioxide, which by international scientific convention is assigned a value of one (1). See **Global Warming Potential (GWP)** and **Greenhouse Gases**.

Carbon Dioxide Equivalent: The amount of carbon dioxide by weight emitted into the atmosphere that would produce the same estimated radiative forcing as a given weight of another radiatively active gas. Carbon dioxide equivalents are computed by multiplying the weight of the gas being measured (for example, methane) by its estimated global warming potential (which is 21 for methane). "Carbon equivalent units" are defined as carbon dioxide equivalents multiplied by the carbon content of carbon dioxide (i.e., 12/44).

Carbon Intensity: The amount of carbon by weight emitted per unit of energy consumed. A common measure of carbon intensity is weight of carbon per British thermal unit (Btu) of energy. When there is only one fossil fuel under consideration, the carbon intensity and the emissions coefficient are the same thing. When there are several fuels, carbon intensity is based on their combined emissions coefficients weighted by their energy consumption levels. See **Emissions Coefficient** and **Carbon Output Rate**.

Carbon Output Rate: The amount of carbon by weight per kilowatt-hour of electricity produced.

Carbon Sequestration: The fixation of atmospheric carbon dioxide in a carbon sink through biological or physical processes.

Carbon Sink: A reservoir that absorbs or takes up released carbon from another part of the carbon cycle. The four sinks, which are regions of the Earth within which carbon behaves in a systematic manner, are the atmosphere, terrestrial biosphere (usually including freshwater systems), oceans, and sediments (including fossil fuels).

Catalytic Cracking: The refining process of breaking down the larger, heavier, and more complex hydrocarbon molecules into simpler and lighter molecules. Catalytic cracking is accomplished by the use of a catalytic agent and is an effective process for increasing the yield of gasoline from crude oil. Catalytic cracking processes fresh feeds and recycled feeds.

Catalytic Reforming: A refining process using controlled heat and pressure with catalysts to rearrange certain hydrocarbon molecules, thereby converting

paraffinic and naphthenic type hydrocarbons (e.g., low-octane gasoline boiling range fractions) into petrochemical feedstocks and higher octane stocks suitable for blending into finished gasoline.

C.I.F. (Cost, Insurance and Freight): A sales transaction in which the seller pays for the transportation and insurance of the goods up to the port of destination specified by the buyer.

Circuit: A conductor or a system of conductors through which electric current flows.

Climate: The average course or condition of the weather over a period of years as exhibited by temperature, humidity, wind velocity, and precipitation.

Climate Change: A term used to refer to all forms of climatic inconsistency, but especially to significant change from one prevailing climatic condition to another. In some cases, "climate change" has been used synonymously with the term "global warming"; scientists, however, tend to use the term in a wider sense inclusive of natural changes in climate as well as climatic cooling.

Coal: A readily combustible black or brownish-black rock whose composition, including inherent moisture, consists of more than 50 percent by weight and more than 70 percent by volume of carbonaceous material. It is formed from plant remains that have been compacted, hardened, chemically altered, and metamorphosed by heat and pressure over geologic time. See **Coal Rank**.

Coalbed: A bed or stratum of coal. Also called a coal seam.

Coalbed Methane: Methane produced from coalbeds in the same way that natural gas is produced from other strata. See **Methane**.

Coal Briquets: Anthracite, bituminous, and lignite briquets are secondary solid fuels manufactured from coal by a process in which the coal is partly dried, warmed to expel excess moisture, and then compressed into briquets, usually without the use of a binding substance.

Coal Coke: See **Coke (Coal)**.

Coal Production: The sum of sales, mine consumption, issues to miners, and issues to coke, briquetting, and other ancillary plants at mines. Production data include quantities extracted from surface and underground mines, and normally exclude wastes removed at mines or associated preparation plants.

Coal Rank: The classification of coals according to their degree of progressive alteration from lignite to anthracite. In the U.S., the standard ranks of coal include lignite, subbituminous coal, bituminous coal, and anthracite and are based on fixed carbon, volatile matter, heating value, and agglomerating (or caking) properties.

Coal Stocks: Coal quantities that are held in storage for future use and disposition. *Note:* When coal data are collected for a particular reporting period (month, quarter, or year), coal stocks are commonly measured as of the last day of this period.

Cogeneration: The production of electrical energy and another form of useful energy (such as heat or steam) through the sequential use of energy.

Cogenerator: A generating facility that produces electricity and another form of useful thermal energy (such as heat or steam) used for industrial, commercial, heating, or cooling purposes. See **Electric Utility** and **Nonutility Power Producer**.

Coke (Coal): A solid carbonaceous residue derived from low-ash, low-sulfur bituminous coal from which the volatile constituents are driven off by baking in an oven at temperatures as high as 2,000 degrees Fahrenheit so that the fixed carbon and residual ash are fused together. Coke is used as a fuel and as a reducing agent in smelting iron ore in a blast furnace. Coke from coal is grey, hard, and porous and has a heating value of 24.8 million Btu per ton.

Coke (Petroleum): A residue high in carbon content and low in hydrogen that is the final product of thermal decomposition in the condensation process in cracking. This product is reported as marketable coke or catalyst coke. The conversion is 5 barrels (of 42 U.S. gallons each) per short ton. Coke from petroleum has a heating value of 6.024 million Btu per barrel.

Coke Oven Gas: The gaseous portion of volatile substances driven off in the coking process after other coal chemicals are removed.

Coke Plant: A plant where coal is carbonized in slot or beehive ovens for the manufacture of coke.

Coking Coal: Bituminous coal suitable for making coke. See **Coke (Coal)**.

Combined Cycle: An electric generating technology in which electricity is produced from otherwise lost waste heat exiting from one or more gas (combustion) turbines. The exiting heat is routed to a conventional boiler or to a heat recovery steam generator for utilization by a steam turbine in the production of electricity. Such designs increase the efficiency of the electric generating unit.

Combined Cycle Unit: An electric generating unit that consists of one or more combustion turbines and one or more boilers with a portion of the required energy input to the boiler(s) provided by the exhaust gas of the combustion turbine(s).

Combined Pumped-Storage Electric Power Plant: A pumped-storage hydroelectric power plant that uses both pumped water and natural stream flow to produce electricity. See **Pumped-Storage Hydroelectric Power Plant** and **Pure Pumped-Storage Hydroelectric Power Plant**.

Combustion: Chemical oxidation accompanied by the generation of light and heat.

Completion: Installation of permanent equipment for the production of oil or gas. If a well is equipped to produce only oil or gas from one zone or reservoir, the definition of a well (classified as an oil well or gas well) and the definition of a completion are identical. However, if a well is equipped to produce oil and/or gas separately from more than one reservoir, a well is not synonymous with a completion. See **Well**.

Conference of the Parties (COP): The collection of nations that have ratified the Framework Convention on Climate Change (FCCC). The primary role of the COP is to keep implementation of the FCCC under review and make the decisions necessary for its effective implementation. See **Framework Convention on Climate Change (FCCC)**.

Consumption: See **Energy Consumption**.

Conventional Gasoline: Finished motor gasoline not included in the oxygenated or reformulated gasoline categories. *Note:* This category excludes reformulated gasoline blendstock for oxygenate blending (RBOB) as well as other blendstock. See **Motor Gasoline (Finished)**.

Conventional Mill (Uranium): A facility engineered and built principally for processing of uranium ore materials mined from the earth and the recovery, by chemical treatment in the mill's circuits, of uranium and/or other valued coproduct components from the processed one.

Conventional Thermal Electricity Generation: Electricity generated by an electric power plant using coal, petroleum, or gas as its source of energy.

Conversion Factor: A number that translates units of one measurement system into corresponding values of another measurement system. (Thermal conversion factors or heat contents or heat values can be used to

translate physical units of measure for various fuels into Btu equivalents.) *Note:* For specific conversion factors, see EIA data products.

COP: See **Conference of the Parties (COP)**.

Cost, Insurance and Freight: See **C.I.F. (Cost, Insurance and Freight)**.

Cracking: The refining process of breaking down the larger, heavier, and more complex hydrocarbon molecules into simpler and lighter molecules. See **Catalytic Cracking** and **Thermal Cracking**.

Crude Oil: A mixture of hydrocarbons that exists in liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Depending upon the characteristics of the crude stream, it may also include:

1. Small amounts of hydrocarbons that exist in gaseous phase in natural underground reservoirs but are liquid at atmospheric pressure after being recovered from oil well (casinghead) gas in lease separators and are subsequently commingled with the crude stream without being separately measured. Lease condensate recovered as a liquid from natural gas wells in lease or field separation facilities and later mixed into the crude stream is also included;
2. Small amounts of nonhydrocarbons produced with the oil, such as sulfur and various metals;
3. Drip gases, and liquid hydrocarbons produced from tar sands, Gilsonite, and oil shale.

Liquids produced at natural gas processing plants are excluded. Crude oil is refined to produce a wide array of petroleum products, including heating oils; gasoline, diesel, and jet fuels; lubricants; asphalt; ethane, propane, and butane; and many other products used for their energy or chemical content.

Crude Oil (including Lease Condensate): See **Crude Oil**.

Crude Oil Landed Cost: The dollar-per-barrel price of crude oil at the port of discharge. Included are the charges associated with the purchase, transporting, and insuring of a cargo from the purchase point to the port of discharge. Not included are charges incurred at the discharge port (e.g., import tariffs or fees, wharfage charges, and demurrage charges).

Crude Oil Less Lease Condensate: A mixture of hydrocarbons that exists in liquid phase in natural

underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Such hydrocarbons as lease condensate and natural gasoline recovered as liquids from natural gas wells in lease or field separation facilities and later mixed into the crude stream are excluded. Depending upon the characteristics of the crude stream, crude oil may also include:

1. Small amounts of hydrocarbons that exist in gaseous phase in natural underground reservoirs but are liquid at atmospheric pressure after being recovered from oil well (casinghead) gas in lease separators and are subsequently commingled with the crude stream without being separately measured;
2. Small amounts of nonhydrocarbons produced with the oil, such as sulfur and various metals.

Crude Oil Production: The volume of crude oil produced from oil reservoirs during given periods of time. The amount of such production for a given period is measured as volumes delivered from lease storage tanks (i.e., the point of custody transfer) to pipelines, trucks, or other media for transport to refineries or terminals with, adjustments for (1) net differences between opening and closing lease inventories, and (2) basic sediment and water.

Cubic Foot (cf), Natural Gas: The amount of natural gas contained at standard temperature and pressure (60 degrees Fahrenheit and 14.73 pounds standard per square inch) in a cube whose edges are one foot long.

Cull Wood: Wood logs, chips, or wood products that are burned.

Current (Electric): A flow of electrons in an electrical conductor. The strength or rate of movement of the electricity is measured in amperes.

Cycling: The practice of producing natural gas for the extraction of natural gas liquids, returning the dry residue to the producing reservoir to maintain reservoir pressure and increase the ultimate recovery of natural gas liquids.

Cycling Plants: See **Natural Gas Processing Plants**.

Czechoslovakia: State that split into two separate states—Czech Republic and Slovakia—on January 1, 1993.

Delayed Coking: A process by which heavier crude oil fractions can be thermally decomposed under conditions of elevated temperature and pressure to produce a mixture of lighter oils and petroleum coke.

Demand: See **Energy Demand**.

Demand (Electric): See **Electricity Demand**.

Development Well: A well drilled within the proved area of an oil or gas reservoir to the depth of a stratigraphic horizon known to be productive.

Direct Current: An electric current that flows in a constant direction. The magnitude of the current does not vary or has a slight variation.

Distillate Fuel Oil: A general classification for one of the petroleum fractions produced in conventional distillation operations. It includes diesel fuels and fuel oils. Products known as No. 1, No. 2, and No. 4 diesel fuel are used in on-highway diesel engines, such as those in trucks and automobiles, as well as off-highway engines, such as those in railroad locomotives and agricultural machinery. Products known as No. 1, No. 2, and No. 4 fuel oils are used primarily for space heating and electric power generation.

1. **No. 1 Distillate:** A light petroleum distillate that can be used as either a diesel fuel (see **No. 1 Diesel Fuel**) or a fuel oil (see **No. 1 Fuel Oil**).
 - a. **No. 1 Diesel Fuel:** A light distillate fuel oil that has distillation temperatures of 550 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 975. It is used in high-speed diesel engines generally operated under frequent speed and load changes, such as those in city buses and similar vehicles. See **No. 1 Distillate**.
 - b. **No. 1 Fuel Oil:** A light distillate fuel oil that has distillation temperatures of 400 degrees Fahrenheit at the 10-percent recovery point and 550 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 396. It is used primarily as fuel for portable outdoor stoves and portable outdoor heaters. See **No. 1 Distillate**.
2. **No. 2 Distillate:** A petroleum distillate that can be used either as a diesel fuel (see **No. 2 Diesel Fuel**) or a fuel oil (see **No. 2 Fuel Oil**).
 - a. **No. 2 Diesel Fuel:** A fuel that has distillation temperatures of 500 degrees Fahrenheit at the 10-percent recovery

point and 640 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 975. It is used in high-speed diesel engines that are generally operated under uniform speed and load conditions, such as those in railroad locomotives, trucks, and automobiles. See **No. 2 Distillate**.

- i. **Low Sulfur No.2 Diesel Fuel:** No. 2 diesel fuel that has a sulfur level no higher than 0.05 percent by weight. It is used primarily in motor vehicle diesel engines for on-highway use.
- ii. **High Sulfur No. 2 Diesel Fuel:** No. 2 diesel fuel that has a sulfur level above 0.05 percent by weight.

b. **No. 2 Fuel Oil (Heating Oil):** A distillate fuel oil that has distillation temperatures of 400 degrees Fahrenheit at the 10-percent recovery point and 640 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 396. It is used in atomizing-type burners for domestic heating or for moderate capacity commercial/industrial burner units. See **No. 2 Distillate**.

3. **No. 4 Fuel:** A distillate fuel oil made by blending distillate fuel oil and residual fuel oil stocks. It conforms to ASTM Specification D 396 or Federal Specification VV-F-815C and is used extensively in industrial plants and in commercial burner installations that are not equipped with preheating facilities. It also includes No. 4 diesel fuel used for low- and medium-speed diesel engines and conforms to ASTM Specification D 975.

Distillation Unit (Atmospheric): The primary distillation unit that processes crude oil (including mixtures of other hydrocarbons) at approximately atmospheric conditions. It includes a pipe still for vaporizing the crude oil and a fractionation tower for separating the vaporized hydrocarbon components in the crude oil into fractions with different boiling ranges. This is done by continuously vaporizing and condensing the components to separate higher boiling point material. The selected boiling ranges are set by the processing

scheme, the properties of the crude oil, and the product specifications.

Distribution: The delivery of electricity to retail customers.

Distribution System: The portion of an electric system that is dedicated to delivering electric energy to an end user.

Domestic Inland Consumption (Petroleum): The sum of all refined petroleum products supplied for domestic use (excludes international bunker fuels). Consumption is calculated product-by-product by adding production, imports, and crude oil burned directly, and then subtracting exports and changes in primary stocks. *Note:* A net withdrawal from primary stocks increases consumption and a net addition to primary stocks decreases consumption.

Dry (Coal) Basis: Coal quality data calculated to a theoretical basis in which no moisture is associated with the sample. This basis is determined by measuring the weight loss of a sample when its inherent moisture is driven off under controlled conditions of low temperature air-drying followed by heating to just above the boiling point of water (104 to 110 degrees centigrade).

Dry Gas: See **Dry Natural Gas**.

Dry Hole: An exploratory or development well found to be incapable of producing either oil or gas in sufficient quantities to justify completion as an oil or gas well.

Dry Natural Gas: Natural gas which remains after: 1) the liquefiable hydrocarbon portion has been removed from the gas stream (i.e., gas after lease, field, and/or plant separation); and 2) any volumes of nonhydrocarbon gases have been removed where they occur in sufficient quantity to render the gas unmarketable. *Note:* Dry natural gas is also known as consumer-grade natural gas. The parameters for measurement are cubic feet at 60 degrees Fahrenheit and 14.73 pounds per square inch absolute. See **Natural Gas**.

Dry Natural Gas Production: The process of producing consumer-grade natural gas. Natural gas withdrawn from reservoirs is reduced by volumes used at the production (lease) site and by processing losses. Volumes used at the production site include (1) the volume returned to reservoirs in **cycling**, repressuring of oil reservoirs, and conservation operations; and (2) gas vented and flared. Processing losses include (1) nonhydrocarbon gases (e.g., water vapor, carbon dioxide, helium, hydrogen sulfide, and nitrogen) removed from the gas stream; and (2) gas converted to liquid form, such as lease condensate and plant liquids. Volumes of

dry gas withdrawn from gas storage reservoirs are not considered part of production. Dry natural gas production equals marketed production less extraction loss.

Dry Production: See **Dry Natural Gas Production**.

Electrical Generating Capacity: See **Generator Capacity**.

Electricity: A form of energy characterized by the presence and motion of elementary charged particles generated by friction, induction, or chemical change.

Electricity Capacity: The maximum load of electric power, commonly expressed in megawatts (MW), by which generators, turbines, transformers, transmission circuits, stations, or systems are rated.

Electricity Demand: The rate at which energy is delivered to loads and scheduling points by generation, transmission, and distribution facilities.

Electricity Generation: The process of producing electric energy or the amount of electric energy produced by transforming other forms of energy, commonly expressed in kilowatthours (kWh) or megawatthours (MWh).

Electricity Generation, Gross: See **Gross Generation**.

Electricity Generation, Net: See **Net Generation**.

Electricity Installed Capacity: See **Generator Nameplate Capacity (Installed)**.

Electric Plant (Physical): See **Electric Power Plant**.

Electric Power: The rate at which electric energy is transferred. Electric power is measured by capacity and commonly expressed in **megawatts** (MW).

Electric Power Plant: A facility containing prime movers, electric generators, and auxiliary equipment for converting mechanical, chemical, and/or fission energy into electric energy.

Electric System: Physically connected generation, transmission, and distribution facilities operated as an integrated unit under one central management, or operating supervision.

Electric Utility: A corporation, person, agency, authority, or other legal entity or instrumentality that owns and/or operates facilities for the generation, transmission, distribution, or sale of electric energy for use primarily by the public. Utilities provide electricity within a designated franchised service area and file

forms listed in the Code of Federal Regulations, Title 18, Part 141. *Note:* Facilities that qualify as cogenerators or small power producers under the Public Utility Regulatory Policies Act (PURPA) are not considered electric utilities. See **Nonutility Power Producer**.

Emissions: Anthropogenic releases of gases to the atmosphere. In the context of global climate change, they consist of radiatively important greenhouse gases (e.g., the release of carbon dioxide during fuel combustion). See **Greenhouse Gases**.

Emissions Coefficient: A unique value for scaling emissions to activity data in terms of a standard rate of emissions per unit of activity (e.g., pounds of carbon dioxide emitted per British thermal unit (Btu) of fossil fuel consumed.)

Energy: The capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy). Energy has several forms, some of which are easily convertible and can be changed to another form useful for work. Most of the world's convertible energy comes from fossil fuels that are burned to produce heat that is then used as a transfer medium to mechanical or other means in order to accomplish tasks. Electrical energy is usually measured in kilowatthours, while heat energy is usually measured in British thermal units.

Energy Consumption: The use of energy as a source of heat or power or as a raw material input to a manufacturing process.

Energy Demand: The requirement for energy use as an input to provide products and/or services.

Energy Loss: See **Power Loss**.

Energy Production: See production terms associated with specific energy types.

Energy Reserves: Estimated quantities of energy sources that are demonstrated to exist with reasonable certainty on the basis of geologic and engineering data (proved reserves) or that can reasonably be expected to exist on the basis of geologic evidence that supports projections from proved reserves (probable/indicated reserves). Knowledge of the location, quantity, and grade of probable/indicated reserves is generally incomplete or much less certain than it is for proved energy reserves. *Note:* This term is equivalent to "Demonstrated Reserves" as defined in the resource/reserve classification contained in the U.S. Geological Survey Circular 831, 1980. Demonstrated reserves include measured and indicated reserves but exclude inferred reserves.

Energy Source: Any substance or natural phenomenon that can be consumed or transformed to supply heat or power. Included are petroleum, coal, natural gas, nuclear, wood and waste, electricity, wind, sunlight, geothermal, and water movement. An equivalent term is fuel.

Energy Supply: Energy made available for future disposition. Supply can be considered and measured from the point of view of the energy provider or the receiver.

Enriched Uranium: Uranium in which the ^{235}U isotope concentration has been increased to greater than the 0.711 percent ^{235}U (by weight) present in natural uranium.

Enrichment Services: See **Separative Work Units**.

ETBE: See **Ethyl Tertiary Butyl Ether (ETBE)**.

Ethane: A normally gaseous straight-chain hydrocarbon, (C_2H_6). It is a colorless, paraffinic gas that boils at a temperature of -127.48 degrees Fahrenheit. It is extracted from natural gas and refinery gas streams.

Ether: A generic term applied to a group of organic chemical compounds composed of carbon, hydrogen, and oxygen, characterized by an oxygen atom attached to two carbon atoms (e.g., methyl tertiary butyl ether).

Ethylene: A colorless, flammable, gaseous, olefinic hydrocarbon recovered from natural gas and petroleum. Ethylene is used as a petrochemical feedstock for numerous chemical applications and the production of consumer goods.

Ethyl Tertiary Butyl Ether (ETBE): A colorless, flammable, oxygenated hydrocarbon blend stock. See **Oxygenates**.

EU: See **European Union (EU)**.

European Union (EU): Current members are: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal,, Spain, Sweden, and United Kingdom. *Note:* Data for Faroe Islands are included in the EU-related data reported here..

Exploratory Well: A hole drilled: a) to find and produce oil or gas in an unproved area; b) to find a new reservoir in a field previously found to be producing oil or gas from another reservoir; or c) to extend the limit of a known oil or gas reservoir.

Exports (U.S.): Shipments of goods from within the 50 States and the District of Columbia to U.S. possessions

and territories or to any foreign country. See **United States (U.S.)**.

Extraction Loss: The reduction in volume of natural gas due to the removal of natural gas liquid constituents, such as ethane, propane, and butane, at natural gas processing plants.

Fabricated Fuel: Fuel assemblies composed of an array of fuel rods loaded with pellets of enriched uranium dioxide.

Fahrenheit: A temperature scale on which the boiling point of water is at 212 degrees above zero on the scale and the freezing point is at 32 degrees above zero at standard atmospheric pressure.

F.A.S. Value (Free Alongside Ship Value): The value of a commodity at the port of exportation, generally including the purchase price, plus all charges incurred in placing the commodity alongside the carrier at the port of exportation in the country of exportation.

FCCC: See **Framework Convention on Climate Change (FCCC)**.

Field Separation Facility: A surface installation designed to recover lease condensate from a produced natural gas stream usually originating from more than one lease and managed by the operator of one or more these leases.

Fixed Carbon: The nonvolatile matter in coal minus the ash. Fixed carbon is the solid residue other than ash obtained by prescribed methods of destructive distillation of a coal. Fixed carbon is the part of the total carbon that remains when coal is heated in a closed vessel until all volatile matter is driven off.

Flared: Gas burned in flares on the base site or at gas processing plants.

Flared Natural Gas: See **Flared**.

Flexicoking: A thermal cracking process that converts heavy hydrocarbons such as crude oil, tar sands bitumen, and distillation residues into light hydrocarbons. Feedstocks can be any hydrocarbons, including those containing high concentrations of sulfur and metals.

Fluid Coking: A thermal cracking process utilizing the fluidized-solids technique to remove carbon (coke) for continuous conversion of heavy, low-grade, oils into lighter products.

F.O.B. (Free On Board): A sales transaction in which the seller makes the product available for pick up at a specified port or terminal at a specified price and the

buyer pays for the subsequent transportation and insurance.

Former Czechoslovakia: See **Czechoslovakia**.

Former U.S.S.R.: See **U.S.S.R.**

Former Yugoslavia: See **Socialist Federal Republic of Yugoslavia**.

Fossil Fuel: Any naturally occurring organic fuel originating in the Earth's crust, such as petroleum, coal, and natural gas.

Fossil Fueled Steam-Electric Power Plant: An electricity generation plant in which the prime mover is a turbine rotated by high-pressure steam produced in a boiler by heat from burning fossil fuels.

Fossil-Fuel Electric Generation: Electric generation in which the prime mover is a turbine rotated by high-pressure steam produced in a boiler by heat from burning fossil fuels.

Fractionation: The process by which saturated hydrocarbons are removed from natural gas and separated into distinct products, or "fractions," such as propane, butane, and ethane.

Framework Convention on Climate Change (FCCC): An agreement opened for signature at the "Earth Summit" in Rio de Janeiro, Brazil, on June 4, 1992, which has the goal of stabilizing greenhouse gas concentrations in the atmosphere at a level that would prevent significant anthropogenically forced climate change. See **Climate Change**.

Free On Board: See **F.O.B. (Free On Board)**.

Fuel: An equivalent term is energy source. See also **Fossil Fuel**.

Fuel Cells: One or more cells capable of generating an electrical current by converting the chemical energy of a fuel directly into electrical energy. Fuel cells differ from conventional electrical cells in that the active materials such as fuel and oxygen are not contained within the cell but are supplied from outside.

Fuel Ethanol: An anhydrous, denatured aliphatic alcohol (C₂H₅OH) intended for motor gasoline blending. See **Oxygenates**.

Fuelwood: See **Wood Energy**.

Futures Market: A trade center for quoting prices on contracts for the delivery of a specified quantity of a commodity at a specified time and place in the future.

Gas (Electric): A fuel burned under boilers and by internal combustion engines for electric generation. These include natural gas, manufactured gas, and waste gas.

Gas Condensate Well: A gas well that produces from a gas reservoir containing considerable quantities of liquid hydrocarbons in the pentane and heavier range generally described as “condensate.” See **Lease Condensate**.

Gasohol: A blend of finished motor gasoline containing alcohol (generally ethanol but sometimes methanol) at a concentration of 10 percent or less by volume. Data on gasohol that has at least 2.7 percent oxygen, by weight, and is intended for sale inside carbon monoxide nonattainment areas are included in data on oxygenated gasoline. See **Motor Gasoline (Finished)** and **Oxygenated Gasoline**.

Gas Oil: European and Asian designation for No. 2 heating oil and No. 2 diesel fuel.

Gasoline: See **Motor Gasoline (Finished)**.

Gasoline Blending: See **Motor Gasoline Blending**.

Gasoline Grades: The classification of gasoline by octane ratings. Each type of gasoline (conventional, oxygenated, and reformulated) is classified by three grades - Regular, Midgrade, and Premium. *Note:* Gasoline sales are reported by grade in accordance with their classification at the time of sale. In general, automotive octane requirements are lower at high altitudes. Therefore, in some areas of the U.S., such as the Rocky Mountain States, the octane ratings for the gasoline grades may be 2 or more octane points lower.

1. **Regular Gasoline:** Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 85 and less than 88. *Note:* Octane requirements may vary by altitude. See **Gasoline Grades**.
2. **Midgrade Gasoline:** Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 88 and less than or equal to 90. *Note:* Octane requirements may vary by altitude. See **Gasoline Grades**.
3. **Premium Gasoline:** Gasoline having an antiknock index, i.e., octane rating, greater than 90. *Note:* Octane requirements may vary by altitude. See **Gasoline Grades**.

Gas to Liquids (GTLs): A process that combines the carbon and hydrogen elements in natural gas molecules

to make synthetic liquid petroleum products, such as diesel fuel.

Gas-Turbine Electric Power Plant: A plant in which the prime mover is a gas turbine. A gas turbine typically consists of an axial-flow air compressor and one or more combustion chambers where liquid or gaseous fuel is burned. The hot gases expand to drive the generator and then are used to run the compressor.

Gas Well: A well completed for the production of natural gas from one or more gas zones or reservoirs. (Wells producing both crude oil and natural gas are classified as oil wells.)

GDP: See **Gross Domestic Product (GDP)**.

Generating Facility: An existing or planned location or site at which prime movers, electric generators, and/or equipment for converting mechanical, chemical, and/or nuclear energy into electric energy are situated or will be situated.

Generating Unit: Any combination of physically connected generator(s), reactor(s), boiler(s), combustion turbine(s), or other prime mover(s) operated together to produce electric power.

Generation (Electricity): See **Electricity Generation**.

Generator: A machine that converts mechanical energy into electrical energy.

Generator Capacity: The maximum output, commonly expressed in megawatts (MW), that generating equipment can supply to system load, adjusted for ambient conditions.

Generator Nameplate Capacity (Installed): The maximum rated output of a generator, prime mover, or other electric power production equipment under specific conditions designated by the manufacturer. Installed generator nameplate capacity is commonly expressed in megawatts (MW) and is usually indicated on a nameplate physically attached to the generator.

Geothermal: Pertaining to heat within the Earth.

Geothermal Electric Power Generation: Electricity derived from heat found under the Earth's surface. Within the Earth, there are vast amounts of molten rock and metal, covered by succeeding layers of cooler material, up to the crust of the Earth's surface. Underground rivers generate steam that is liberated in the form of geysers through fissures in the Earth's surface.

Geothermal Energy: Hot water or steam extracted from geothermal reservoirs in the Earth's crust. Water or steam extracted from geothermal reservoirs can be used for geothermal heat pumps, water heating, or electricity generation.

Geothermal Plant: A plant in which the prime mover is a steam turbine. The turbine is driven either by steam produced from hot water or by natural steam that derives its energy from heat found in rocks or fluids at various depths beneath the surface of the Earth. The fluids are extracted by drilling and/or pumping.

Giga: One billion (10^9).

Gigawatt (GW): One billion (10^9) watts. See **Watt**.

Gigawatthour (GWh): One billion (10^9) watthours. See **Watthour**.

Gilsonite: Trademark name for uinitaite (or uinitahite), a black, brilliantly lustrous natural variety of asphalt, found in parts of Utah and western Colorado.

Global Climate Change: See **Climate Change**.

Global Warming: An increase in the near surface temperature of the Earth. Global warming has occurred in the distant past as the result of natural influences, but the term is today most often used to refer to the warming predicted to occur as a result of increased anthropogenic emissions of greenhouse gases. See **Climate Change**.

Global Warming Potential (GWP): An index used to compare the relative radiative forcing of different gases without directly calculating the changes in atmospheric concentrations. GWPs are calculated as the ratio of the radiative forcing that would result from the emission of one kilogram of a greenhouse gas to that from the emission of one kilogram of carbon dioxide over a fixed period of time, such as 100 years.

Greenhouse Effect: The result of water vapor, carbon dioxide, and other gases trapping radiant (infrared) energy, thereby keeping the Earth's surface warmer than it would otherwise be. Greenhouse gases within the lower levels of the atmosphere trap this radiation, which would otherwise escape into space, and subsequent re-radiation of some of this energy back to the Earth maintains higher surface temperatures than would occur if the gases were absent. See **Greenhouse Gases**.

Greenhouse Gases: Those gases, such as water vapor, carbon dioxide, nitrous oxide, methane, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride, that are transparent to solar (short-wave) radiation but opaque to long-wave radiation, thus preventing long-wave radiant energy from leaving the atmosphere. The net effect is a trapping of

absorbed radiation and a tendency to warm the planet's surface.

Grid: The layout of an electrical distribution system.

Gross Domestic Product (GDP): The total value of goods and services produced by labor and property located in a country. As long as the labor and property are located in the country, the supplier (that is, the workers and for property, the owners) may be either residents of that country or residents of foreign countries.

Gross Electricity Generation: See **Gross Generation**.

Gross Generation: The total amount of electric energy produced by generating units and measured at the generating terminal in kilowatthours (kWh) or megawatthours (MWh).

Gross Heat Content of a Quantity of Fuel: See **Heat Content of a Quantity of Fuel, Gross**.

Gross Input to Atmospheric Crude Oil Distillation Units: Total input to atmospheric crude oil distillation units. Includes all crude oil, lease condensate, natural gas plant liquids, unfinished oils, liquefied refinery gases, slop oils, and other liquid hydrocarbons produced from tar sands, Gilsonite, and oil shale. See **Distillation Unit (Atmospheric)**.

Gross Production, Natural Gas: See **Gross Withdrawals, Natural Gas**.

Gross Withdrawals, Natural Gas: Full well-stream volume of produced natural gas, including all natural gas plant liquids and all nonhydrocarbon gases, but excluding lease condensate.

GW: See **Gigawatt**.

GWh: See **Gigawatthour**.

Heap Leach Solutions: The separation, or dissolving-out, from mined rock of the soluble uranium constituents by the natural action of percolating a prepared chemical solution through mounded (heaped) rock material. The mounded material usually contains low grade mineralized material and/or waste rock produced from openpit or underground mines. The solutions are collected after percolation is completed and processed to recover the valued component.

Heat Content of a Quantity of Fuel, Gross: The total amount of heat released when a fuel is burned. Coal, crude oil, and natural gas all include chemical compounds of carbon and hydrogen. When those fuels are burned, the carbon and hydrogen combine with oxygen in the air to produce carbon dioxide and water.

Some of the energy released in burning goes into transforming the water into steam and is usually lost. The amount of heat spent in transforming the water into steam is counted as part of gross heat content but is not counted as part of net heat content. Gross heat content is also referred to as the higher heating value. Btu conversion factors typically used by the Energy Information Administration represent gross heat content.

Heat Content of a Quantity of Fuel, Net: The amount of usable heat energy released when a fuel is burned under conditions similar to those in which it is normally used. Net heat content is also referred to as the lower heating value. Btu conversion factors typically used by the Energy Information Administration represent gross heat content.

Heating Value: See **Heat Content of a Quantity of Fuel, Gross** and **Heat Content of a Quantity of Fuel, Net**.

HFCs: See **Hydrofluorocarbons**.

High Sulfur No. 2 Diesel Fuel: No. 2 diesel fuel that has a sulfur level above 0.05 percent by weight.

High-Temperature Collector: See **Solar Thermal Collector, High-Temperature**.

Hydrocarbon: An organic chemical compound of hydrogen and carbon in either gaseous, liquid, or solid phase. The molecular structure of hydrocarbon compounds varies from the simplest (e.g., methane, a constituent of natural gas) to the very heavy and very complex.

Hydroelectric Power: The production of electricity from the kinetic energy of falling water..

Hydroelectric Power Generation: Electricity generated by an electric power plant whose turbines are driven by falling water. It includes electric utility and industrial generation of hydroelectricity, unless otherwise specified. Generation is reported on a net basis, i. e., on the amount of electric energy generated after the electric energy consumed by station auxiliaries and the losses in the transformers that are considered integral parts of the station are deducted.

Hydroelectric Power Plant: A plant in which the turbine generators are driven by falling water.

Hydroelectric Pumped Storage: Hydroelectricity that is generated during peak loads by using water previously pumped into an elevated storage reservoir during off-peak periods when excess generating capacity is available to do so. When additional generating capacity is needed, the water can be released from the reservoir

through a conduit to turbine generators located in a power plant at a lower level.

Hydrofluorocarbons (HFCs): A group of man-made chemicals composed of one or two carbon atoms and varying numbers of hydrogen and fluorine atoms. Most HFCs have 100-year Global Warming Potentials in the thousands.

Hydrogen: A colorless, odorless, highly flammable gaseous element. It is the lightest of all gases and the most abundant element in the universe, occurring chiefly in combination with oxygen in water and also in acids, bases, alcohols, petroleum, and other hydrocarbons.

IEA: See **International Energy Agency (IEA)**.

Imports (U.S.): Receipts of goods into the 50 States and the District of Columbia from U.S. possessions and territories or from any foreign country. See **United States (U.S.)**.

Improved Recovery: Extraction of crude oil or natural gas by any method other than those that rely primarily on natural reservoir pressure, gas lift, or a system of pumps.

Independent Power Producer: A corporation, person, agency, authority, or other legal entity or instrumentality which is a wholesale electricity producer that operates within the franchised service territory of a host electric utility and is usually authorized to sell at market-based rates. Unlike traditional electric utilities, independent power producers do not possess transmission facilities, unless authorized by law, nor do they sell electricity in the retail market. Independent power producers are considered to be nonutility power producers. See **Electric Utility** and **Nonutility Power Producer**.

Indicated Recoverable Reserves, Coal: See **Probable (Indicated) Reserves, Coal**.

In Situ Leach Mining (ISL): The recovery, by chemical leaching, of the valuable components of an orebody without physical extraction of the ore from the ground. Also referred to as "solution mining."

Intergovernmental Panel on Climate Change (IPCC): A panel established jointly in 1988 by the World Meteorological Organization and the United Nations Environment Program to assess the scientific information relating to climate change and to formulate realistic response strategies.

Internal Combustion Electric Power Plant: A plant in which the prime mover is an internal combustion engine. An internal combustion engine has one or more cylinders in which the process of combustion takes place, converting energy released from the rapid burning of a

fuel-air mixture into mechanical energy. Diesel or gas-fired engines are the principal types used in electric plants. The plant is usually operated during periods of high demand for electricity.

International Bunker Fuels: See **Bunker Fuels**.

International Energy Agency (IEA): Current members are: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. *Note:* Data for Faroe Islands, Greenland, Guam, the former Hawaiian Trade Zone, Puerto Rico, and the U.S. Virgin Islands (usually listed here as Virgin Islands, U.S.) are included in the IEA-related data reported here.

Isopentane: A saturated branched-chain hydrocarbon (C₅H₁₂) obtained by fractionation of natural gasoline or isomerization of normal pentane.

Jet Fuel: A refined petroleum product used in jet aircraft engines. It includes kerosene-type jet fuel and naphtha-type jet fuel.

Joule: The meter-kilogram-second unit of work or energy, equal to the work done by a force of one newton when its point of application moves through a distance of one meter in the direction of the force; equivalent to 10⁷ ergs and one watt-second.

Kerosene: A light petroleum distillate that is used in space heaters, cook stoves, and water heaters and is suitable for use as a light source when burned in wick-fed lamps. Kerosene has a maximum distillation temperature of 400 degrees Fahrenheit at the 10-percent recovery point, a final boiling point of 572 degrees Fahrenheit, and a minimum flash point of 100 degrees Fahrenheit. Included are No. 1-K and No. 2-K, the two grades recognized by ASTM Specification D 3699 as well as all other grades of kerosene called range or stove oil, which have properties similar to those of No. 1 fuel oil. See **Kerosene-Type Jet Fuel**.

Kerosene-Type Jet Fuel: A kerosene-based product having a maximum distillation temperature of 400 degrees Fahrenheit at the 10-percent recovery point and a final maximum boiling point of 572 degrees Fahrenheit and meeting ASTM Specification D 1655 and Military Specifications MIL-T-5624P and MIL-T-8133D (Grades JP-5 and JP-8). It is used for commercial and military turbojet and turboprop aircraft engines.

Kilowatt (kW): One thousand (10³) watts. See **Watt**.

Kilowatthour (kWh): One thousand (10³) watthours. See **Watthour**.

kW: See **Kilowatt (kW)**.

kWh: See **Kilowatthour (kWh)**.

Kyoto Protocol: The result of negotiations at the third Conference of the Parties (COP-3) in Kyoto, Japan, in December 1997. The Kyoto Protocol sets binding greenhouse gas emissions targets for countries that sign and ratify the agreement. The gases covered under the Protocol include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride.

Landed Cost (Crude Oil): See **Crude Oil Landed Cost**.

Lease Condensate: A mixture consisting primarily of pentanes and heavier hydrocarbons which is recovered as a liquid from natural gas in lease separation facilities. This category excludes natural gas plant liquids, such as butane and propane, which are recovered at downstream natural gas processing plants or facilities.

Lease Separation Facility (Lease Separator): A facility installed at the surface for the purpose of (a) separating gases from produced crude oil and water at the temperature and pressure conditions set by the separator and/or (b) separating gases from that portion of the produced natural gas stream that liquefies at the temperature and pressure conditions set by the separator.

Lignite: The lowest rank of coal, often referred to as brown coal, used almost exclusively as fuel for steam-electric power generation. It is brownish-black and has a high inherent moisture content, sometimes as high as 45 percent. The heat content of lignite ranges from 9 to 17 million Btu per ton on a moist, mineral-matter-free basis. The heat content of lignite consumed in the U.S. averages 13 million Btu per ton, on the as-received basis (i.e., containing both inherent moisture and mineral matter).

Lignite Briquets: See **Coal Briquets**.

Liquefied Natural Gas (LNG): Natural gas (primarily methane) that has been liquefied by reducing its temperature to minus 260 degrees Fahrenheit at atmospheric pressure. (The volume of the LNG is 1/600 that of the gas in its vapor state.)

Liquefied Petroleum Gases (LPG): A group of hydrogen-based gases derived from crude oil refining or natural gas fractionation. They include ethane, ethylene, propane, propylene, normal butane, butylene, isobutane, and isobutylene. For convenience of transportation, these gases are liquefied through pressurization.

Liquefied Refinery Gases (LRG): Liquefied petroleum gases fractionated from refinery or still gases. Through compression and/or refrigeration, they are retained in the liquid state. The reported categories are ethane/ethylene, propane/propylene, normal butane/butylene, and isobutane. Excludes still gas used for chemical or rubber manufacture, which is reported as petrochemical feedstock, and also excludes liquefied petroleum gases intended for blending into gasoline, which are reported as gasoline blending components.

Liquid Collector: A medium-temperature solar thermal collector, employed predominately in water heating, which uses pumped liquid as the heat transfer mechanism. See **Solar Thermal Collector, Medium-Temperature**.

LNG: See **Liquefied Natural Gas (LNG)**.

Load (Electric): The amount of electric power delivered or required at any specific point or points on an electric system. The requirement originates at the energy-consuming equipment of the consumers.

Low Sulfur No. 2 Diesel Fuel: No. 2 diesel fuel that has a sulfur level no higher than 0.05 percent by weight. It is used primarily in motor vehicle diesel engines for on-highway use.

Low-Temperature Collector: See **Solar Thermal Collector, Low-Temperature**.

LPG: See **Liquefied Petroleum Gases**.

LRG: See **Liquefied Refinery Gases**.

Lubricants: Substances used to reduce friction between bearing surfaces, or incorporated into other materials used as processing aids in the manufacture of other products, or used as carriers of other materials. Petroleum lubricants may be produced either from distillates or residues. Lubricants include all grades of lubricating oils, from spindle oil to cylinder oil to those used in greases.

Manufactured Gas: A gas obtained by destructive distillation of coal, or by thermal decomposition of oil, or by the reaction of steam passing through a bed of heated coal or coke. Examples are coal gases, coke oven gases, producer gas, blast furnace gas, blue (water) gas, and carbureted water gas

Market-Based Pricing: Prices of electric power or other forms of energy determined in an open market system of supply and demand under which prices are set solely by agreements as to what buyers will pay and sellers will accept. Such prices could recover less or more than full

costs, depending upon what the buyer and seller see as their relevant opportunities and risks.

Marketed Production, Natural Gas: Gross withdrawals of natural gas from reservoirs less gas used for reinjection into reservoirs for repressuring, gas that is vented and flared, and nonhydrocarbon gases removed in treating or processing operations.

Measured Recoverable Reserves, Coal: See **Proved (Measured) Reserves, Coal** and **Proved Recoverable Reserves, Coal**.

Medium-Temperature Collector: See **Solar Thermal Collector, Medium-Temperature**.

Megawatt (MW): One million (10^6) watts. See **Watt**.

Megawatthour (MWh): One million (10^6) watthours. See **Watthour**.

Metallurgical Coal: Coking coal and pulverized coal consumed in making steel.

Metallurgical Coke: A strong, hard coke produced mainly for use in the iron and steel industry, where it serves as a chemical agent and source of energy. It is used mainly in blast furnaces to absorb the oxygen contained in iron oxides and provide energy for smelting. A portion of its potential energy is captured in the gases generated in the smelting process, then recycled in the form of blast furnace gas to provide additional energy inside or outside the smelting process. Metallurgical coke is also used to some extent as a domestic fuel and as a raw material for the manufacture of gas. See **Coke (Coal)**.

Methane: A colorless, flammable, odorless hydrocarbon gas (CH_4) that is the major component of natural gas. It is also an important source of hydrogen in various industrial processes. Methane has a 100-year Global Warming Potential of 21.

Methanol: A light alcohol that can be used for motor gasoline blending. See **Oxygenates**.

Methyl Tertiary Butyl Ether (MTBE): A colorless, flammable, liquid oxygenated hydrocarbon containing 18.15 percent oxygen. See **Oxygenates**.

Metric Ton: A unit of weight equal to 2,204.6 pounds.

Midgrade Gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 88 and less than or equal to 90. *Note:* Octane requirements may vary by altitude. See **Gasoline Grades**.

Milling of Uranium: The processing of uranium from ore mined by conventional methods, such as underground or openpit, to separate the uranium from the undesired material in the ore.

Million Btu: One million (10⁶) British thermal units (Btu). See **British Thermal Unit (Btu)**.

Mineral-Matter-Free Basis: Mineral matter in coal is the parent material in coal from which ash is derived. It comes from minerals present in the original plant materials that formed the coal or from extraneous sources such as sediments and precipitates from mineralized water. Mineral matter in coal cannot be analytically determined and is commonly calculated using data on ash and ash-forming constituents. Coal analyses are calculated to the mineral-matter-free basis by adjusting formulas used in calculations in order to deduct the weight of mineral matter from the total coal.

Moist (Coal) Basis: "Moist" coal contains its natural inherent or bed moisture, but does not include water adhering to the surface. Coal analyses expressed on a moist basis are performed or adjusted so as to describe the data when the coal contains only that moisture which exists in the bed in its natural state of deposition, and when the coal has not lost any moisture due to drying.

Motor Gasoline (Finished): A complex mixture of relatively volatile hydrocarbons with or without small quantities of additives, blended to form a fuel suitable for use in spark-ignition engines. Motor gasoline, as defined in ASTM Specification D 4814 or Federal Specification VV-G-1690C, is characterized as having a boiling range of 122 degrees to 158 degrees Fahrenheit at the 10 percent recovery point to 365 degrees to 374 degrees Fahrenheit at the 90 percent recovery point. "Motor Gasoline" includes conventional gasoline; all types of oxygenated gasoline, including gasohol; and reformulated gasoline, but excludes aviation gasoline. *Note:* Volumetric data on blending components, such as oxygenates, are not counted in data on finished motor gasoline until the blending components are blended into the gasoline.

1. **Conventional Gasoline:** Motor gasoline not included in the oxygenated or reformulated gasoline categories. *Note:* This category excludes reformulated gasoline blendstock for oxygenate blending (RBOB) as well as other blendstock. See **Motor Gasoline (Finished)**.
2. **Oxygenated Gasoline:** Finished motor gasoline, other than reformulated gasoline, having an oxygen content of 2.7 percent or higher by weight and required by the U.S. Environmental Protection Agency (EPA) to be sold in areas designated by EPA as carbon

monoxide (CO) nonattainment areas. See **Nonattainment Area**. *Note:* Oxygenated gasoline excludes oxygenated fuels program reformulated gasoline (OPRG) and reformulated gasoline blendstock for oxygenate blending (RBOB). Data on gasohol that has at least 2.7 percent oxygen, by weight, and is intended for sale inside CO nonattainment areas are included in data on oxygenated gasoline. Other data on gasohol are included in data on conventional gasoline. See **Motor Gasoline (Finished)**.

3. **Reformulated Gasoline:** Finished motor gasoline formulated for use in motor vehicles, the composition and properties of which meet requirements of the reformulated gasoline regulations promulgated by the U.S. Environmental Protection Agency under Section 211 (k) of the Clean Air Act. *Note:* This category includes oxygenated fuels program reformulated gasoline (OPRG) but excludes reformulated gasoline blendstock for oxygenate blending (RBOB). See **Motor Gasoline (Finished)**.

Motor Gasoline Blending: Mechanical mixing of motor gasoline blending components, and oxygenates when required, to produce finished motor gasoline. Finished motor gasoline may be further mixed with other motor gasoline blending components or oxygenates, resulting in increased volumes of finished motor gasoline and/or changes in the formulation of finished motor gasoline (e.g., conventional motor gasoline mixed with MTBE to produce oxygenated motor gasoline).

Motor Gasoline Blending Components: Naphthas (e.g., straight-run gasoline, alkylate, reformate, benzene, toluene, xylene) used for blending or compounding into finished motor gasoline. These components include reformulated gasoline blendstock for oxygenate blending (RBOB) but exclude oxygenates (alcohols, ethers), butane, and pentanes plus. *Note:* Oxygenates are reported as individual components and are included in the total for other hydrocarbons, hydrogen, and oxygenates.

Motor Gasoline, Conventional: See **Conventional Gasoline**.

Motor Gasoline Grades: See **Gasoline Grades**.

Motor Gasoline, Oxygenated: See **Oxygenated Gasoline**.

Motor Gasoline, Reformulated: See **Reformulated Gasoline**.

MTBE: See **Methyl Tertiary Butyl Ether**.

Municipal Solid Waste: Residential solid waste and some nonhazardous commercial, institutional, and industrial wastes.

MW: See **Megawatt (MW)**.

MWh: See **Megawatthour (MWh)**.

Naphtha: A generic term applied to a petroleum fraction with an approximate boiling range between 122 degrees and 400 degrees Fahrenheit.

Naphtha-Type Jet Fuel: A fuel in the heavy naphtha boiling range having an average gravity of 52.8 degrees API, 20 to 90 percent distillation temperatures of 290 degrees to 470 degrees Fahrenheit, and meeting Military Specification MIL-T-5624L (Grade JP-4). It is used primarily for military turbojet and turboprop aircraft engines because it has a lower freeze point than other aviation fuels and meets engine requirements at high altitudes and speeds.

Naphthas: Refined or partly refined light distillates with an approximate boiling point range of 27 degrees to 221 degrees Centigrade. Blended further or mixed with other materials, they make high-grade motor gasoline or jet fuel. Also used as solvents, petrochemical feedstocks, or as raw materials for the production of town gas.

Natural Gas: A gaseous mixture of hydrocarbon compounds, the primary one being methane. *Note:* The Energy Information Administration measures wet natural gas and its two sources of production, associated-dissolved natural gas and nonassociated natural gas, and dry natural gas, which is produced from wet natural gas.

1. **Wet Natural Gas:** A mixture of hydrocarbon compounds and small quantities of various nonhydrocarbons existing in the gaseous phase or in solution with crude oil in porous rock formations at reservoir conditions. The principal hydrocarbons normally contained in the mixture are methane, ethane, propane, butane, and pentane. Typical nonhydrocarbon gases that may be present in reservoir natural gas are water vapor, carbon dioxide, hydrogen sulfide, nitrogen, and trace amounts of helium. Under reservoir conditions, natural gas and its associated liquefiable portions occur either in a single gaseous phase in the reservoir or in solution with crude oil and are not distinguishable at the time as separate substances. *Note:* The Securities and Exchange Commission and the Financial Accounting Standards Board refer to this product as natural gas.

- a. **Associated-Dissolved Natural Gas:** Natural gas that occurs in crude oil reservoirs either as free gas (associated) or as a gas in solution with crude oil (dissolved gas). See **Natural Gas**.

- b. **Nonassociated Natural Gas:** Natural gas that is not in contact with significant quantities of crude oil in the reservoir. See **Natural Gas**.

2. **Dry Natural Gas:** Natural gas which remains after: 1) the liquefiable hydrocarbon portion has been removed from the gas stream (i.e., gas after lease, field, and/or plant separation); and 2) any volumes of nonhydrocarbon gases have been removed where they occur in sufficient quantity to render the gas unmarketable. *Note:* Dry natural gas is also known as consumer-grade natural gas. The parameters for measurement are cubic feet at 60 degrees Fahrenheit and 14.73 pounds per square inch absolute. See **Natural Gas**.

Natural Gas, "Dry": See **Dry Natural Gas**.

Natural Gas, Dry Production: See **Dry Natural Gas**.

Natural Gas Dry Production: Gross withdrawals of natural gas from reservoirs less gas used for reinjection into reservoirs for repressuring, gas that is flared or vented, gas lost in transmission, and shrinkage. Derived by subtracting shrinkage or extraction loss from marketed production. It represents the amount of natural gas that can be marketed and consumed as a gas.

Natural Gas Gross Production: See **Gross Withdrawals, Natural Gas**.

Natural Gas Gross Withdrawals: See **Gross Withdrawals, Natural Gas**.

Natural Gas Hydrates: Solid, crystalline, wax-like substances composed of water, methane, and usually a small amount of other gases, with the gases being trapped in the interstices of a water-ice lattice. They form beneath permafrost and on the ocean floor under conditions of moderately high pressure and at temperatures near the freezing point of water.

Natural Gas Liquids (NGL): A general term for all liquid products separated from natural gas in gas processing or cycling plants. They include natural gas plant liquids and lease condensate.

Natural Gas Marketed Production: See **Marketed Production, Natural Gas**.

Natural Gas, Pipeline Quality: See **Pipeline Quality Natural Gas**.

Natural Gas Plant Liquids (NGPL): Those hydrocarbons in natural gas that are separated as liquids at downstream natural gas processing plants or at fractionating and cycling plants. Data on lease condensate are excluded. Products obtained include liquefied petroleum gases and pentanes plus.

Natural Gas Processing Plants: Facilities designed to recover natural gas liquids from a stream of natural gas that may or may not have passed through lease separators and/or field separation facilities. These facilities also control the quality of natural gas to be marketed. Cycling plants are classified as natural gas processing plants.

Natural Gas Production: See **Dry Natural Gas Production**.

Natural Gas, Wet: See **Wet Natural Gas**.

Natural Gasoline: A term used in the gas processing industry to refer to a mixture of liquid hydrocarbons (mostly pentanes and heavier hydrocarbons) extracted from natural gas. It includes isopentane.

Net Electricity Consumption: Consumption of electricity computed as generation, plus imports, minus exports, minus transmission and distribution losses.

Net Electricity Generation: See **Net Generation**.

Net Electric Power Generation: See **Net Generation**.

Net Generation: The amount of gross generation less the electrical energy consumed at the generating station(s) for station service or auxiliaries. *Note:* Electricity required for pumping at pumped-storage plants is regarded as electricity for station service and is deducted from gross generation.

Net Heat Content of a Quantity of Fuel: See **Heat Content of a Quantity of Fuel, Net**.

NGL: See **Natural Gas Liquids**.

NGPL: See **Natural Gas Plant Liquids**.

Nitrogen Oxides (NO_x): Compounds of nitrogen and oxygen produced by the combustion of fossil fuels.

Nitrous Oxide (N₂O): A colorless gas, naturally occurring in the atmosphere. Nitrous oxide has a 100-year Global Warming Potential of 310.

No. 1 Diesel Fuel: A light distillate fuel oil that has distillation temperatures of 550 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 975. It is used in high-speed diesel engines generally operated under frequent speed and load changes, such as those in city buses and similar vehicles. See **No. 1 Distillate**.

No. 2 Diesel Fuel: A fuel that has distillation temperatures of 500 degrees Fahrenheit at the 10-percent recovery point and 640 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 975. It is used in high-speed diesel engines that are generally operated under uniform speed and load conditions, such as those in railroad locomotives, trucks, and automobiles. See **No. 2 Distillate**.

No. 4 Diesel Fuel: See **No. 4 Fuel**.

No. 1 Distillate: A light petroleum distillate that can be used as either a diesel fuel (see **No. 1 Diesel Fuel**) or a fuel oil (see **No. 1 Fuel Oil**).

No. 2 Distillate: A petroleum distillate that can be used either as a diesel fuel (see **No. 2 Diesel Fuel**) or a fuel oil (see **No. 2 Fuel Oil**).

No. 4 Fuel: A distillate fuel oil made by blending distillate fuel oil and residual fuel oil stocks. It conforms to ASTM Specification D 396 or Federal Specification VV-F-815C and is used extensively in industrial plants and in commercial burner installations that are not equipped with preheating facilities. It also includes No. 4 diesel fuel used for low- and medium-speed diesel engines and conforms to ASTM Specification D 975.

No. 1 Fuel Oil: A light distillate fuel oil that has distillation temperatures of 400 degrees Fahrenheit at the 10-percent recovery point and 550 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 396. It is used primarily as fuel for portable outdoor stoves and portable outdoor heaters. See **No. 1 Distillate**.

No. 2 Fuel Oil (Heating Oil): A distillate fuel oil that has distillation temperatures of 400 degrees Fahrenheit at the 10-percent recovery point and 640 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 396. It is used in atomizing-type burners for domestic heating or for moderate capacity commercial/industrial burner units. See **No. 2 Distillate**.

No. 4 Fuel Oil: See **No. 4 Fuel**.

NO_x: See **Nitrogen Oxides**.

Nonassociated Natural Gas: Natural gas that is not in contact with significant quantities of crude oil in the reservoir. See **natural gas**.

Nonattainment Area: Any area that does not meet the national primary or secondary ambient air quality standard established by the U.S. Environmental Protection Agency for designated pollutants, such as carbon monoxide and ozone.

Nonconventional Plant (Uranium): A facility engineered and built principally for processing of uraniferous solutions that are produced during in situ leach mining, from heap leaching, or in the manufacture of other commodities, and the recovery, by chemical treatment in the plant's circuits, of uranium from the processed solutions.

Nonhydrocarbon Gases: Typical nonhydrocarbon gases that may be present in reservoir natural gas such as water vapor, carbon dioxide, hydrogen sulfide, nitrogen, and trace amounts of helium.

Nonutility: See **Nonutility Power Producer**.

Nonutility Power Producer: A corporation, person, agency, authority, or other legal entity or instrumentality that owns or operates facilities for electric generation and is not an electric utility. Nonutility power producers include qualifying cogenerators, qualifying small power producers, and other nonutility generators (including independent power producers). Nonutility power producers are without a designated franchised service area and do not file forms listed in the Code of Federal Regulations, Title 18, Part 141. See **Electric Utility**.

Normal Butane: See **Butane**.

Nuclear Electric Power: Electricity generated by an electric power plant whose turbines are driven by steam produced by the heat from the fission of nuclear fuel in a reactor.

Nuclear Fuel: Fissionable materials that have been enriched to such a composition that, when placed in a nuclear reactor, they will support a self-sustaining fission chain reaction, producing heat in a controlled manner for process use.

Nuclear Power: See **Nuclear Electric Power**.

Nuclear Power Generation: See **Nuclear Electric Power**.

Nuclear Power Plant: A single-unit or multi-unit facility in which heat produced in one or more reactors by the fissioning of nuclear fuel is used to drive one or more steam turbines.

Nuclear Reactor: An apparatus in which a nuclear fission chain reaction can be initiated, controlled, and sustained at a specific rate. A reactor includes fuel (fissionable material), moderating material to control the rate of fission, a heavy-walled pressure vessel to house reactor components, shielding to protect personnel, a system to conduct heat away from the reactor, and instrumentation for monitoring and controlling the reactor's systems.

Octane: A flammable liquid hydrocarbon found in petroleum. Used as a standard to measure the anti-knock properties of motor fuel.

Octane Rating: A number used to indicate gasoline's antiknock performance in motor vehicle engines. The two recognized laboratory engine test methods for determining the antiknock rating, i.e., octane rating, of gasolines are the Research method and the Motor method. In the U.S., to provide a single number as guidance to the consumer, the antiknock index $(R+M)/2$, which is the average of the Research and Motor octane numbers, was developed.

OECD: See **Organization for Economic Cooperation and Development (OECD)**.

OECD Europe: See **Organization for Economic Cooperation and Development, Europe (OECD Europe)**.

Off Peak: Period of relatively low system demand. These periods often occur in daily, weekly, and seasonal patterns

Ohm: The unit of measurement of electrical resistance. The resistance of a circuit in which a potential difference of 1 volt produces a current of 1 ampere.

Oil: See **Crude Oil**.

Oil Reservoir: An underground pool of liquid consisting of hydrocarbons, sulfur, oxygen, and nitrogen trapped within a geological formation and protected from evaporation by the overlying mineral strata.

Oil Shale: A sedimentary rock containing kerogen, a solid organic material.

Oil Well: A well completed for the production of crude oil from one or more oil zones or reservoirs. Wells producing both crude oil and natural gas are classified as oil wells.

Oil Well (Casinghead) Gas: Associated and dissolved gas produced along with crude oil from oil completions.

OPEC: See **Organization of Petroleum Exporting Countries (OPEC)**.

Operable Nuclear Unit (Foreign): A foreign nuclear generating unit that has generated electricity for a grid.

Operable Nuclear Unit (U.S.): A U.S. nuclear generating unit that has completed low-power testing and has been issued a full-power operating license by the Nuclear Regulatory Commission.

Operable Unit (Electric): A unit available to provide electric power to the **grid**.

Organization for Economic Cooperation and Development (OECD): Current members are Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea (usually listed here as Korea, South), Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. *Note:* Data for Faroe Islands, Greenland, Guam, the former Hawaiian Trade Zone, Puerto Rico, and the U.S. Virgin Islands (usually listed here as Virgin Islands, U.S.) are included in the OECD-related data reported here.

Organization for Economic Cooperation and Development, Europe (OECD Europe): Includes Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. Data for Faroe Islands are included in the OECD Europe-related data reported here.

Organization of Petroleum Exporting Countries (OPEC): Current members are Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. (Ecuador withdrew from OPEC on December 31, 1992 and Gabon withdrew on December 31, 1994.)

Other Hydrocarbons (Petroleum): Materials received by a refinery and consumed as raw materials. Includes hydrogen, coal tar derivatives, Gilsonite, and natural gas received by the refinery for reforming into hydrogen. Natural gas to be used as fuel is excluded.

Oxidize: To chemically transform a substance by combining it with oxygen.

Oxygenated Gasoline: Finished motor gasoline, other than reformulated gasoline, having an oxygen content of 2.7 percent or higher by weight and required by the U.S. Environmental Protection Agency (EPA) to be sold in areas designated by EPA as carbon monoxide (CO)

nonattainment areas. See **Nonattainment Area**. *Note:* Oxygenated gasoline excludes oxygenated fuels program reformulated gasoline (OPRG) and reformulated gasoline blendstock for oxygenate blending (RBOB). Data on gasohol that has at least 2.7 percent oxygen, by weight, and is intended for sale inside CO nonattainment areas are included in data on oxygenated gasoline. Other data on gasohol are included in data on conventional gasoline. See **Motor Gasoline (Finished)**.

Oxygenates: Substances which, when added to gasoline, increase the amount of oxygen in that gasoline blend. ethanol, methyl tertiary butyl ether (MTBE), ethyl tertiary butyl ether (ETBE), and methanol are common oxygenates.

Paraffin (Oil): A light-colored, wax-free oil obtained by pressing paraffin distillate.

Paraffin (Wax): The wax removed from paraffin distillates by chilling and pressing. When separating from solutions, it is a colorless, more or less translucent, crystalline mass, without odor and taste, slightly greasy to touch, and consisting of a mixture of solid hydrocarbons in which the paraffin series predominates.

Passive Solar Heating: A solar heating system that uses no external mechanical power, such as pumps or blowers, to move the collected solar heat.

Peak Load: The maximum load during a specified period of time.

Pentanes Plus: A mixture of hydrocarbons, mostly pentanes and heavier, extracted from natural gas. Includes isopentane, natural gasoline, and plant condensate.

Perfluorocarbons (PFCs): A group of man-made chemicals composed of one or two carbon atoms and four to six fluorine atoms, containing no chlorine. PFCs have no commercial uses and are emitted as a byproduct of aluminum smelting and semiconductor manufacturing. PFCs have very high 100-year Global Warming Potentials and are very long-lived in the atmosphere.

Petrochemical Feedstock: Feedstock derived from petroleum, used principally for the manufacture of chemicals, synthetic rubber, and a variety of plastics. The categories reported are naphthas (endpoint less than 401 degrees Fahrenheit) and other oils (endpoint equal to or greater than 401 degrees Fahrenheit)

Petroleum: A broadly defined class of liquid hydrocarbon mixtures. Included are crude oil, lease condensate, unfinished oils, refined products obtained from the processing of crude oil, and natural gas plant liquids. Nonhydrocarbon compounds blended into

finished petroleum products, such as additives and detergents, are included after blending has been completed.

Petroleum Coke: See **Coke (Petroleum)**.

Petroleum Consumption: See **Apparent Consumption (Petroleum)**.

Petroleum Jelly: A semi-solid oily product produced from de-waxing lubricating oil basestocks.

Petroleum Products: Products obtained from the processing of crude oil (including lease condensate), natural gas, and other hydrocarbon compounds. Petroleum products include unfinished oils, liquefied petroleum gases, pentanes plus, aviation gasoline, motor gasoline, naphtha-type jet fuel, kerosene-type jet fuel, kerosene, distillate fuel oil, residual fuel oil, petrochemical feedstocks, special naphthas, lubricants, waxes, petroleum coke, asphalt, road oil, still gas, and other miscellaneous products.

Petroleum Stocks: Primary stocks of crude oil and petroleum products held in storage at (or in) leases, refineries, natural gas processing plants, pipelines, tankfarms, and bulk terminals that can store at least 50,000 barrels of petroleum products or that can receive petroleum products by tanker, barge, or pipeline. Crude oil that is in-transit by water from Alaska or that is stored on Federal leases or in the Strategic Petroleum Reserve is included. Primary stocks exclude stocks of foreign origin that are held in bonded warehouse storage.

PFCs: See **Perfluorocarbons**.

Photovoltaic Cell: An electronic device consisting of layers of semiconductor materials fabricated to form a junction (adjacent layers of materials with different electronic characteristics) and electrical contacts and being capable of converting incident light directly into electricity (direct current).

Photovoltaic Energy: Direct-current electricity generated from sunlight through solid-state semiconductor devices that have no moving parts.

Photovoltaic Module: An integrated assembly of interconnected photovoltaic cells designed to deliver a selected level of working voltage and current at its output terminals, packaged for protection against environmental degradation, and suited for incorporation in photovoltaic power systems. The electricity produced is used primarily in applications requiring remote power, such as radio communication, cathodic protection, and navigational aids. See **Photovoltaic Cell**.

Pipeline Quality Natural Gas: A mixture of hydrocarbon compounds existing in the gaseous phase with sufficient energy content, generally above 900 British thermal units, and a small enough share of impurities for transport through commercial gas pipelines and sale to end-users.

Plant: A term commonly used either as a synonym for an industrial establishment or an electricity generation facility or to refer to a particular process within an establishment.

Plant (Electric): A facility at which are located prime movers, electric generators, and auxiliary equipment for converting mechanical chemical, and/or nuclear energy into electric energy. A plant may contain more than one type of prime mover.

Plant Condensate: One of the natural gas liquids, mostly pentanes and heavier hydrocarbons, recovered and separated as liquids at gas inlet separators or scrubbers in natural gas processing plants. Does not include lease condensate.

Power (Electric): See **Electric Power**.

Power Loss: The difference between electricity input and output as a result of an energy transfer between two points.

Premium Gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than 90. *Note:* Octane requirements may vary by altitude. See **Gasoline Grades**.

Preparation Plant: A mining facility at which coal is crushed, screened, and mechanically cleaned.

Primary Coal: All coal milled and, when necessary, washed and sorted.

Prime Mover: The engine, turbine, water wheel, or similar machine that drives an electric generator; or, for reporting purposes, a device that converts energy to electricity directly (e.g., photovoltaic solar and fuel cell(s)).

Probable Energy Reserves: Estimated quantities of energy sources that, on the basis of geologic evidence that supports projections from proved reserves, can reasonably be expected to exist and be recoverable under existing economic and operating conditions. Site information is insufficient to establish with confidence the location, quality, and grades of the energy source. *Note:* This term is equivalent to "Indicated Reserves" as defined in the resource/reserve classification contained in the U.S. Geological Survey Circular 831, 1980.

Measured and indicated reserves, when combined, constitute demonstrated reserves. See **Energy Reserves**.

Probable (Indicated) Reserves, Coal: Reserves or resources for which tonnage and grade are computed partly from specific measurements, samples, or production data and partly from projection for a reasonable distance on the basis of geological evidence. The sites available are too widely or otherwise inappropriately spaced to permit the mineral bodies to be outlined completely or the grade established throughout. See **Probable Energy Reserves**.

Processing Gain: See **Refinery Processing Gain (Petroleum)**.

Processing Loss: See **Refinery Processing Loss (Petroleum)**.

Processing of Uranium: The recovery of uranium from solutions produced by nonconventional mining methods, i.e., in situ leach mining (ISL), a byproduct of copper or phosphate mining, or heap leaching.

Processing Plant (Natural Gas): See **Natural Gas Processing Plant**.

Production: See production terms associated with specific energy types.

Propane: A normally gaseous straight-chain hydrocarbon, (C₃H₈). It is a colorless paraffinic gas that boils at a temperature of -43.67 degrees Fahrenheit. It is extracted from natural gas or refinery gas streams. It includes all products covered by Gas Processors Association Specifications for commercial propane and HD-5 propane and ASTM Specification D 1835.

Propylene: An olefinic hydrocarbon (C₃H₆) recovered from refinery and petrochemical processes.

Proved Energy Reserves: Estimated quantities of energy sources that analysis of geologic and engineering data demonstrates with reasonable certainty are recoverable under existing economic and operating conditions. The location, quantity, and grade of the energy source are usually considered to be well established in such reserves. *Note:* This term is equivalent to "Measured Reserves" as defined in the resource/reserve classification contained in the U.S. Geological Survey Circular 831, 1980. Measured and indicated reserves, when combined, constitute demonstrated reserves. See also **Energy Reserves**.

Proved Recoverable Reserves, Coal: Defined by the World Energy Council as the tonnage within the Proved Amount in Place that can be recovered (extracted from the earth in raw form) under present and expected local

economic conditions with existing available technology. It approximates the U.S. term proved (measured) reserves, coal. See **Proved (Measured) Reserves, Coal**.

Proved (Measured) Reserves, Coal: Reserves or resources for which tonnage is computed from dimensions revealed in outcrops, trenches, workings, and drill holes and for which the grade is computed from the results of detailed sampling. The sites for inspection, sampling, and measurement are spaced so closely and the geologic character is so well defined that size, shape, and mineral content are well established. The computed tonnage and grade are judged to be accurate within limits that are stated, and no such limit is judged to be different from the computed tonnage or grade by more than 20 percent. See **Proved Energy Reserves**.

Proved Reserves, Crude Oil: The estimated quantities of all liquids defined as crude oil that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Proved Reserves, Natural Gas: The estimated quantities of natural gas that analysis of geological and engineering data demonstrates with reasonable certainty to be recoverable in future years from known oil and gas reservoirs under existing economic and operating conditions.

Public Utility Regulatory Policies Act of 1978: See **PURPA**.

Pulpwood: Roundwood, whole-tree chips, or wood residues.

Pumped Storage: See **Hydroelectric Pumped Storage**.

Pumped-Storage Hydroelectric Power Plant: A plant that usually generates electric energy during peak-load periods by using water previously pumped into an elevated storage reservoir during off-peak periods when excess generating capacity is available to do so. When additional generating capacity is needed, the water can be released from the reservoir through a conduit to turbine generators located in a power plant at a lower level. See **Pure Pumped-Storage Hydroelectric Power Plant** and **Combined Pumped-Storage Electric Power Plant**.

Pure Pumped-Storage Hydroelectric Power Plant: A plant that produces power only from water that has previously been pumped to an upper reservoir.

PURPA: The Public Utility Regulatory Policies Act of 1978, passed by the U.S. Congress. This statute requires States to implement utility conservation programs and

create special markets for cogenerators and small producers who meet certain standards, including the requirement that States set the prices and quantities of power the utilities must buy from such facilities.

Quadrillion Btu: One quadrillion (10^{15}) British thermal units (Btu). See **British Thermal Unit (Btu)**.

Radiative Forcing: A change in average net radiation at the top of the troposphere (known as the tropopause) because of a change in either incoming solar or exiting infrared radiation. A positive radiative forcing tends on average to warm the Earth's surface; a negative radiative forcing on average tends to cool the Earth's surface. Greenhouse gases, when emitted into the atmosphere, trap infrared energy radiated from the Earth's surface and therefore tend to produce positive radiative forcing. See **Greenhouse Gases**.

Radiatively Active Gases: Gases that absorb incoming solar radiation or outgoing infrared radiation, affecting the vertical temperature profile of the atmosphere. See **Radiative Forcing**.

Recoverable Coal: See **Proved Recoverable Reserves, Coal** and **Proved (Measured) Reserves, Coal**.

Recoverable Reserves of Coal: See **Proved Recoverable Reserves, Coal** and **Proved (Measured) Reserves, Coal**.

Refiner Acquisition Cost of Crude Oil: The cost of crude oil to the refiner, including transportation and other fees. The composite cost is the weighted average of domestic and imported crude oil costs. See **U.S. Refiner Acquisition Cost of Imported Crude Oil**. *Note:* The refiner acquisition cost does not include the cost of crude oil purchased for the Strategic Petroleum Reserve (SPR).

Refinery (Petroleum): An installation that manufactures finished petroleum products from crude oil, unfinished oils, natural gas plant liquids, other hydrocarbons, and alcohol.

Refinery Fuel: Crude oil and petroleum products consumed at the refinery for all purposes.

Refinery Gain (Petroleum): See **Refinery Losses and Gains**.

Refinery Gas: See **Still Gas (Refinery Gas)**.

Refinery Input (Petroleum): The raw materials and intermediate materials processed at refineries to produce finished petroleum products. They include crude oil, products of natural gas processing plants, unfinished oils, other hydrocarbons and alcohol, motor gasoline and

aviation blending components, and finished petroleum products.

Refinery Loss (Petroleum): See **Refinery Losses and Gains (Petroleum)**.

Refinery Losses and Gains (Petroleum): Refinery processing gains and refinery processing losses that take place during the refining process itself. Excludes losses that do not take place during the refining process, e.g., spills, fire losses, and contamination during blending, transportation, or storage.

Refinery Output (Petroleum): The total amount of petroleum products produced at a refinery. Includes petroleum consumed by the refinery.

Refinery Processing Gain (Petroleum): The amount by which the total volume of refinery output is greater than the total volume of refinery input for a given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into petroleum products that are, on average, less dense than the input.

Refinery Processing Loss (Petroleum): The amount by which the total volume of refinery output is less than the total volume of refinery input for a given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into petroleum products that are, on average, more dense than the input.

Reforming, Catalytic: See **Catalytic Reforming**.

Reformulated Gasoline: Finished motor gasoline formulated for use in motor vehicles, the composition and properties of which meet requirements of the reformulated gasoline regulations promulgated by the U.S. Environmental Protection Agency under Section 211 (k) of the Clean Air Act. *Note:* This category includes oxygenated fuels program reformulated gasoline (OPRG) but excludes reformulated gasoline blendstock for oxygenate blending (RBOB). See **Motor Gasoline (Finished)**.

Regular Gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 85 and less than 88. *Note:* Octane requirements may vary by altitude. See **Gasoline Grades**.

Reinjected (Natural Gas): The forcing of gas under pressure into an oil reservoir in an attempt to increase recovery.

Renewable Energy Resources: Energy resources that are naturally replenishing but flow-limited. They are virtually inexhaustible in duration but limited in the amount of energy that is available per unit of time. Renewable energy resources include: biomass, hydro,

geothermal, solar, wind, ocean thermal, wave action, and tidal action.

Repressuring: The injection of a pressurized fluid (such as air, gas, or water) into oil or gas reservoir formations to effect greater ultimate recovery.

Reserves, Coal: Quantities of unextracted coal that comprise the demonstrated base for future production, including both proved and probable reserves. See **Proved Energy Reserves; Probable Energy Reserves; Energy Reserves; Proved (Measured) Reserves, Coal; and Probable (Indicated) Reserves, Coal.**

Reservoir: A porous and permeable underground formation containing an individual and separate natural accumulation of producible hydrocarbons (crude oil and/or natural gas) which is confined by impermeable rock or water barriers and is characterized by a single natural pressure system.

Residual Fuel Oil: The heavier oils, known as No. 5 and No. 6 fuel oils, that remain after the distillate fuel oils and lighter hydrocarbons are distilled away in refinery operations. It conforms to ASTM Specifications D 396 and D 975 and Federal Specification VV-F-815C. No. 5, a residual fuel oil of medium viscosity, is also known as Navy Special and is defined in Military Specification MIL-F-859E, including Amendment 2 (NATO Symbol F-770). It is used in steam-powered vessels in government service and inshore power plants. No. 6 fuel oil includes Bunker C fuel oil and is used for the production of electric power, space heating, vessel bunkering, and various industrial purposes.

Road Oil: Any heavy petroleum oil, including residual asphaltic oil, used as a dust palliative and surface treatment on roads and highways. It is generally produced in six grades from 0, the most liquid, to 5, the most viscous.

Rotary Rig: A machine used for drilling wells that employs a rotating tube attached to a bit for boring holes through rock.

Roundwood: Logs, bolts, and other round timber generated from the harvesting of trees.

Secondary Coal: Solid fuels manufactured from primary coal, including coke (coal) or metallurgical coke and coal briquets.

Separative Work Units (SWU): The standard measure of uranium enrichment services.

Sequestration: See **Carbon Sequestration.**

Short Ton (Coal): A unit of weight equal to 2,000 pounds.

Shrinkage (Natural Gas): The volume of natural gas that is transformed into liquid products during processing, primarily at natural gas processing plants.

Sludge: A dense, slushy, liquid-to semi fluid-product that accumulates as an end result of an industrial or technological process designed to purify a substance. Industrial sludges are produced from the processing of energy-related raw materials, chemical products, water, mined ores, sewage, and other natural and man-made products. Sludges can also form from natural processes, such as the runoff produced by rainfall, and accumulate on the bottom of bogs, streams, lakes, and tidelands.

Small Power Producer (SPP): Under the Public Utility Regulatory Policies Act (PURPA), a small power production facility (or small power producer) generates electricity using renewable energy (wood, waste, conventional hydroelectric, wind, solar, and geothermal) as a primary energy source. Fossil fuels can be used, but renewable resources must provide at least 75 percent of the total energy input. See **Nonutility Power Producer.**

SO₂: See **Sulfur Dioxide.**

Socialist Federal Republic of Yugoslavia: State that dissolved into five separate states--Bosnia and Herzegovina; Croatia; Macedonia, The Former Yugoslav Republic of; Serbia and Montenegro; and Slovenia--beginning on June 25, 1991.

Solar Collector: See **Solar Thermal Collector.**

Solar Energy: The radiant energy of the sun that can be converted into other forms of energy, such as heat or electricity. Electricity produced from solar energy heats a medium that powers an electricity-generating device.

Solar Thermal Collector: A device designed to receive solar radiation and convert it to thermal energy. Normally, a solar thermal collector includes a frame, glazing, and an absorber, together with appropriate insulation. The heat collected by the solar thermal collector may be used immediately or stored for later use. Solar thermal collectors are used for space heating; domestic hot water heating; and heating swimming pools, hot tubs, or spas.

Solar Thermal Collector, High-Temperature: A solar thermal collector designed to operate at a temperature of 180 degrees Fahrenheit or higher.

Solar Thermal Collector, Low-Temperature: Metallic or nonmetallic solar thermal collectors that generally operate at temperatures below 110 degrees Fahrenheit

and use pumped liquid or air as the heat transfer medium. They usually contain no glazing and no insulation, and they are often made of plastic or rubber, although some are made of metal.

Solar Thermal Collector, Medium-Temperature:

Solar thermal collectors designed to operate in the temperature range of 140 degrees to 180 degrees Fahrenheit, but that can also operate at a temperature as low as 110 degrees Fahrenheit. The collector typically consists of a metal frame, metal absorption panels with integral flow channels (attached tubing for liquid collectors or integral ducting for air collectors), and glazing and insulation on the sides and back.

Solar Thermal Collector, Special: An evacuated tube collector or a concentrating (focusing) collector. Special collectors operate in the temperature range from just above ambient temperature (low concentration for pool heating) to several hundred degrees Fahrenheit (high concentration for air conditioning and specialized industrial processes).

Solar Thermal Energy: See **Solar Energy**.

Special Naphthas: All finished products within the naphtha range that are used as paint thinners, cleaners, or solvents. These products are refined to a specified flash point. Special naphthas include all commercial hexane and cleaning solvents conforming to ASTM Specifications D 1836 and D 484, respectively. Naphthas to be blended or marketed as motor gasoline or aviation gasoline, or that are to be used as petrochemical and synthetic natural gas (SNG) feedstocks are excluded.

Special Solar Thermal Collector: See **Solar Thermal Collector, Special**.

Spent Liquor: The liquid residue left after an industrial process; can be a component of waste materials used as fuel.

Spot Price: The price for a one-time open market transaction for immediate delivery of a specific quantity of product at a specific location where the commodity is purchased "on the spot" at current market rates.

Spot-Market Price: See **Spot Price**.

SPR: See **Strategic Petroleum Reserve (SPR)**.

Steam Coal: All nonmetallurgical coal.

Steam-Electric Power Plant (Conventional): A plant in which the prime mover is a steam turbine. The steam used to drive the turbine is produced in a boiler where fossil fuels are burned.

Still Gas (Refinery Gas): Any form or mixture of gases produced in refineries by distillation, cracking, reforming, and other processes. The principal constituents are methane, ethane, ethylene, normal butane, butylene, propane, and propylene. Still gas is primarily used as a refinery fuel and as a petrochemical feedstock.

Stocks: Supplies of fuel or other energy source(s) stored for future use. Stocks are reported as of the end of the reporting period.

Strategic Petroleum Reserve (SPR): Petroleum stocks maintained by the U.S. Federal government for use during periods of major supply interruption.

Stripper Well: A well that produces 60 million cubic feet of gas per day or less for period of three consecutive months while producing at its maximum flow rate.

Subbituminous Coal: A coal whose properties range from those of lignite to those of bituminous coal and used primarily as fuel for steam-electric power generation. It may be dull, dark brown to black, soft and crumbly, at the lower end of the range, to bright, jet black, hard, and relatively strong, at the upper end. Subbituminous coal contains 20 to 30 percent inherent moisture by weight. The heat content of subbituminous coal ranges from 17 to 24 million Btu per ton on a moist, mineral-matter-free basis. The heat content of subbituminous coal consumed in the U.S. averages 17 to 18 million Btu per ton, on the as-received basis (i.e., containing both inherent moisture and mineral matter).

Sulfur: A yellowish nonmetallic element, sometimes known as "brimstone." It is present at various levels of concentration in many fossil fuels whose combustion releases sulfur compounds that are considered harmful to the environment. Some of the most commonly used fossil fuels are categorized according their sulfur content, with lower sulfur fuels usually selling at a higher price. *Note:* No. 2 distillate is currently reported as having either a 0.05 percent or lower sulfur level for on-highway vehicle use or a greater than 0.05 percent sulfur level for off-highway use, home heating oil, and commercial and industrial uses. Residual fuel oil, regardless of use, is classified as having either no more than 1 percent sulfur or greater than 1 percent sulfur. Coal is also classified as being low-sulfur at concentrations of 1 percent or less or high-sulfur at concentrations greater than 1 percent.

Sulfur Dioxide (SO₂): A toxic, irritating, colorless gas soluble in water, alcohol, and ether. Used as a chemical intermediate, in paper pulping and ore refining, and as a solvent

Sulfur Hexafluoride (SF₆): A colorless gas soluble in alcohol and ether, and slightly less soluble in water. It is

used as a dielectric in electronics. It possesses the highest 100-year Global Warming Potential (23,900) of any gas.

Sulfur Oxides (SO_x): Compounds containing sulfur and oxygen, such as sulfur dioxide (SO₂) and sulfur trioxide (SO₃).

Supply: See **Energy Supply**.

Surface Mine (Coal): A coal-producing mine that is usually within a few hundred feet of the surface. Earth and rock above or around the coal (overburden) is removed to expose the coalbed, which is then mined with surface excavation equipment such as draglines, power shovels, bulldozers, loaders, and augers. It may also be known as an area, contour, open-pit, strip, or auger mine.

Synthetic Natural Gas (SNG): A manufactured product chemically similar in most respects to natural gas, resulting from the conversion or reforming of petroleum hydrocarbons or from coal gasification. It may easily be substituted for, or interchanged with, pipeline quality natural gas.

System (Electric): See **Electric System**.

SWU: See **Separative Units**.

Tall Oil: The oily mixture of rosin acids, fatty acids, and other materials obtained by acid treatment of the alkaline liquors from the digesting (pulping) of pine wood.

Tanker and Barge: Vessels that transport crude oil or petroleum products.

Tar Sands: Naturally occurring bitumen-impregnated sands that yield mixtures of liquid hydrocarbon and that require further processing other than mechanical blending before becoming finished petroleum products.

Therm: One hundred thousand (10⁵) British thermal units.

Thermal Cracking: A refining process in which heat and pressure are used to break down, rearrange, or combine hydrocarbon molecules. Thermal cracking includes gas oil visbreaking, fluid coking, delayed coking, and other thermal cracking processes (e.g., flexicoking).

Transmission: The movement or transfer of electric energy over an interconnected group of lines and associated equipment between points of supply and points at which it is transformed for delivery to consumers, or is delivered to other electric systems.

Transmission is considered to end when the energy is transformed for distribution to the consumer.

Transmission and Distribution Loss: Electric energy lost due to the transmission and distribution of electricity. Much of the loss is thermal in nature. See **Power Loss**.

Transmission System (Electric): An interconnected group of electric transmission lines and associated equipment for moving or transferring electric energy in bulk between points of supply and points at which it is transformed for delivery over the distribution system lines to consumers, or is delivered to other electric systems.

Troposphere: The inner layer of the atmosphere below about 15 kilometers, within which there is normally a steady decrease of temperature with increasing altitude. Nearly all clouds form and weather conditions manifest themselves within this region. Its thermal structure is caused primarily by the heating of the Earth's surface by solar radiation, followed by heat transfer through turbulent mixing and convection.

Turbine: A machine for generating rotary mechanical power from the energy of a stream of fluid (such as water, steam, or hot gas). Turbines convert the kinetic energy of fluids to mechanical energy through the principles of impulse and reaction, or a mixture of the two.

Underground Mine (Coal): A mine where coal is produced by tunneling into the earth to the coalbed, which is then mined with underground mining equipment such as cutting machines and continuous, longwall, and shortwall mining machines. Underground mines are classified according to the type of opening used to reach the coal, i.e., drift (level tunnel), slope (inclined tunnel), or shaft (vertical tunnel).

Unfinished Oils: All oils requiring further processing, except those requiring only mechanical blending. In most cases, these are produced by partial refining or are purchased in an unfinished state for conversion to finished products by further refining.

United States (U.S.): Unless otherwise noted, United States in this publication means the 50 States and the District of Columbia. *Note:* The United States has varying degrees of jurisdiction over a number of territories and other political entities outside the 50 States and the District of Columbia, including Puerto Rico, the U.S. Virgin Islands (usually listed here as Virgin Islands, U.S.), Guam, American Samoa, Johnston Atoll, Midway Islands, Wake Island, and the Northern Mariana Islands. EIA data programs may include data from some or all of these areas in U.S. totals. For these

programs, data products will contain notes explaining the extent of geographic coverage included under the term "United States." See **Exports (U.S.)** and **Imports (U.S.)**.

Uranium: A heavy, naturally radioactive, metallic element (atomic number 92). Its two principally occurring isotopes are uranium-235 (^{235}U) and uranium-238 (^{238}U). The isotope ^{235}U is indispensable to the nuclear industry because it is the only isotope existing in nature to any appreciable extent that is fissionable by thermal neutrons. The isotope ^{238}U is also important because it absorbs neutrons to produce a radioactive isotope that subsequently decays to plutonium-239 (^{239}Pu), an isotope of plutonium that is also fissionable by thermal neutrons.

Uranium Concentrate: A yellow or brown powder obtained by the milling of uranium ore, processing of in situ leach mining solutions, or as a byproduct of phosphoric acid production. See **In Situ Leach Mining (ISL)**.

Uranium Milling: See **Milling of Uranium**.

Uranium Ore: Rock containing uranium mineralization in concentrations (typically 1 to 4 pounds of U_3O_8 per ton or 0.05 to 0.20 percent U_3O_8) that can be mined economically.

Uranium Oxide: Uranium concentrate or yellowcake. Abbreviated as U_3O_8 . See **Yellowcake**.

U.S.: See **United States (U.S.)**.

U.S. Refiner Acquisition Cost of Imported Crude Oil: The average price paid by U.S. refiners for imported, that is, non-U.S., crude oil booked into their refineries in accordance with accounting procedures generally accepted and consistently and historically applied by the refiners concerned. The refiner acquisition cost of imported crude oil includes transportation and other fees paid by the refiner. See **Refiner Acquisition Cost of Crude Oil and Imports (U.S.)**.

U.S.S.R.: The Union of Soviet Socialist Republics (or Soviet Union) consisted of 15 constituent republics: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Russia, Tajikistan, Ukraine, and Uzbekistan. As a political entity, the U.S.S.R. disbanded on December 26, 1991.

Utility: See **Electric Utility**.

Vented: Gas released into the air on the base site or at processing plants.

Vented, Flared (Natural Gas): A means of disposing of associated gas by venting (releasing) or flaring (burning).

Vented Natural Gas: See **Vented**.

Vessel: A ship used to transport crude oil, petroleum products, or natural gas products. Vessel categories are as follows: Ultra Large Crude Carrier (ULCC), Very Large Crude Carrier (VLCC), Other Tanker, and Specialty Ship (LPG/LNG). See **Tanker and Barge**.

Vessel Bunkering (U.S.): Includes sales for the fueling of commercial or private boats, such as pleasure craft, fishing boats, tugboats, and ocean-going vessels, including vessels operated by oil companies. Excluded are volumes sold to the U.S. Armed Forces.

Visbreaking: A thermal cracking process in which heavy atmospheric or vacuum-still bottoms are cracked at moderate temperatures to increase production of distillate products and reduce viscosity of the distillation residues.

Volatile Matter (Coal): Those products, exclusive of moisture, given off by a material as gas or vapor. Volatile matter is determined by heating the coal to 950 degrees Centigrade under carefully controlled conditions and measuring the weight loss, excluding weight of moisture driven off at 105 degrees Centigrade.

Waste: Municipal solid waste, landfill gas, methane, digester gas, liquid acetonitrile waste, tall oil, waste alcohol, medical waste, paper pellets, sludge waste, solid byproducts, tires, agricultural byproducts, closed loop biomass, fish oil, and straw.

Waste Energy: Municipal solid waste, landfill gas, methane, digester gas, liquid acetonitrile waste, tall oil, waste alcohol, medical waste, paper pellets, sludge waste, solid byproducts, tires, agricultural byproducts, closed loop biomass, fish oil, and straw used as fuel

Water Vapor: Water in a vaporous form, especially when below boiling temperature and diffused (e.g., in the atmosphere).

Watt (W): The unit of electrical power equal to one ampere under a pressure of one volt. A Watt is equal to 1/746 horsepower.

Watt-hour (Wh): The electrical energy unit of measure equal to one watt of power supplied to, or taken from, an electric circuit steadily for one hour.

Waxes: Solid or semi-solid materials derived from petroleum distillates or residues by such treatments as chilling, precipitating with a solvent, or de-oiling. Waxes are light-colored, more-or-less translucent

crystalline masses, slightly greasy to the touch, consisting of a mixture of solid hydrocarbons in which the paraffin series predominates. Included are all marketable waxes, whether crude scale or fully refined. The three grades included are microcrystalline, crystalline fully refined, and crystalline-other. Waxes are used primarily as industrial coatings for surface protection.

Well: A hole drilled in the Earth for the purpose of (1) finding or producing crude oil or natural gas; or (2) producing services related to the production of crude oil or natural gas. See also **completion, development well, dry hole, exploratory well, gas well, and oil well.**

Wellhead: The top of, or a structure built over, a well.

Wet Natural Gas: A mixture of hydrocarbon compounds and small quantities of various nonhydrocarbons existing in the gaseous phase or in solution with crude oil in porous rock formations at reservoir conditions. The principal hydrocarbons normally contained in the mixture are methane, ethane, propane, butane, and pentane. Typical nonhydrocarbon gases that may be present in reservoir natural gas are water vapor, carbon dioxide, hydrogen sulfide, nitrogen, and trace amounts of helium. Under reservoir conditions, natural gas and its associated liquefiable portions occur either in a single gaseous phase in the reservoir or in solution with crude oil and are not distinguishable at the time as separate substances. *Note:* The Securities and Exchange Commission and the Financial Accounting Standards Board refer to this product as natural gas.

White Spirit: A highly refined distillate with a boiling point range of about 150 degrees to 200 degrees Centigrade. It is used as a paint solvent and for dry-cleaning purposes.

Wind Energy: The kinetic energy of wind converted into mechanical energy by wind turbines (i.e., blades rotating from the hub) that drive generators to produce electricity.

Wood: Wood, wood waste, black liquor, red liquor, spent sulfite liquor, pitch, wood sludge, peat, railroad ties, and utility poles.

Wood and Waste: See **Waste** and **Wood.**

Wood Energy: Wood and wood products used as fuel, including wood waste, black liquor, red liquor, spent sulfite liquor, pitch, wood sludge, peat, railroad ties, and utility poles.

Wood Pellets: Fuel manufactured from finely ground wood fiber and used in pellet stoves.

Wood Sludge: See **Sludge.**

Yellowcake: A natural uranium concentrate that takes its name from its color and texture. Yellowcake typically contains 70 to 90 percent U_3O_8 by weight. It is used as feedstock for uranium fuel enrichment and fuel pellet fabrication. See **Uranium Concentrate, Uranium Oxide, Enriched Uranium** and **Fabricated Fuel.**
