16. Abstract The 2003 Motor Vehicle Occupant Safety Survey was the fifth in a series of biennial national telephone surveys on occupant protection issues conducted for the National Highway Traffic Safety Administration (NHTSA). Data collection was conducted by Schulman, Ronca & Bucuvalas, Inc., a national survey research organization. The survey used two questionnaires, each administered to a randomly selected national sample of about 6,000 persons age 16 or older. Interviewing began January 8, 2003 and ended March 30, 2003. This report presents the detailed information on the survey methodology, as well as copies of the questionnaires.

2003 Motor Vehicle Occupant Safety Survey: Methodology

Study Design

The 2003 Motor Vehicle Occupant Safety Survey (MVOSS), like the baseline Motor Vehicle Occupant Safety Survey in 1994 and its follow-up surveys in 1996, 1998 and 2000, was conducted by telephone. Hence, the study procedures called for the construction of a national sampling frame of telephone households from which a random population sample could be derived. For each of the two survey instruments (one focusing on safety belts and the other on car seats, with a common core of questions relating to personal characteristics and driving behaviors), a national probability sample was developed. Each sample was composed of approximately 6,000 persons age 16 and older, including over-samples of persons age 16-39. Since the sampling procedures and data collection methodology for the two samples were identical, procedures described in this report for one sample apply to the other as well.

The procedure for developing a population-based sample for this telephone survey involved four stages. The first stage sample involved using a population-based sample allocation, distributed in proportion to the geographic distribution of the target population according to the most recent Census estimates. The second stage employed a systematic selection of assigned telephone banks within the geographically stratified first stage sample design. The third stage used a random digit dialing (RDD) sampling of telephone households within the telephone banks selected in the second stage. The fourth stage required the identification and systematic selection of one eligible respondent within each sampled household so that the household sampling frame yielded a representative sample of the eligible population. These procedures yielded national estimates of the target population, within specified limits of expected sampling variability, from which valid generalizations can be made to the general public. The sampling procedures used to develop the sample for the 2003 surveys were the same as those used to draw the sample for the 2000, 1998, 1996 and 1994 surveys.

The two primary differences in study methodology between the 2000 MVOSS and the current survey were a change in the field period from November-January to January-March and an increase from a 5-call design to a 10-call design. The new field period for the 2003 MVOSS permitted results to be reported in the same calendar year as the data were collected. There was no reason to expect that the survey results would be affected by this change. The extended call design increases the likelihood of including younger and more mobile respondents, who are less likely to be at home and reached in a five call design. The extended call design also permitted the incorporation of answering messages referring not-at-home respondents to the SRBI toll-free number to conduct interviews and the NHTSA website to confirm the authenticity of the survey.

Sample Construction

Most of the statistical formulas associated with sampling theories are based upon the assumption of simple random sampling. Specifically, the statistical formulas for specifying the sampling precision (estimates of sampling variance), given particular sample sizes, are premised on simple random sampling. Unfortunately, random sampling requires that all of the elements in the population have an equal chance of being selected. Since no enumeration of the total population of the United States (or its subdivisions) is available, all surveys of the general public

2003 Motor Vehicle Occupant Safety Survey: Methodology

are based upon an approximation of the actual population and survey samples are generated by a process closely resembling true random sampling.

The survey samples were based on a modified stratified random digit dialing method, using an area probability/RDD sample rather than a single-stage/RDD sample. There are several important advantages to using an area probability base: (1) it draws the sample proportionate to the geographic distribution of the target population rather than the geographic distribution of telephone households, which is vital to constructing unbiased population estimates from telephone surveys; (2) it allows greater geographic stratification of the sample to control for known geographic differences in non-response rates; and (3) it facilitates the use of Census estimates of population characteristics to weight the completed sample to correct for other forms of sampling and non-sampling bias. Moreover, the precision of sample estimates is generally improved by stratification.

Hence, as specified for the study design for the survey, the adult household population of the United States was stratified by the ten NHTSA regions. The estimated distribution of the population for 2003 by stratum was calculated on the basis of the Bureau of the Census, State Population Projections: 2001 to 2005, (release date, November 2, 2000). At the time of the survey, these were the most recent projections of the distribution of adult population by state. Based on the Census data on the geographic distribution of the target population, the total sample was proportionately allocated by stratum. The expected geographic allocation of the cross-sectional sample for the survey is presented in Table 1.

TABLE 1
Population Aged 16 and Older by NHTSA Region:
2003 Projections for National Cross-Section Survey of 4,500

			Cross-Section
		Population	Proportion
		218,038,339	100.00% (4,500)
Region I	CT, ME, MA, NH, RI, VT	10,854,001	4.98%
Region II	NJ, NY	20,577,880	9.44%
Region III	DE, DC, MD, PA, VA, WV	22,134,821	10.15%
Region IV	AL, FL, GA, KY, MS, NC, SC, TN	42,121,834	19.32%
Region V	IL, IN, MI, MN, OH, WI	38,763,773	17.78%
Region VI	AR, LA, NM, OK, TX	25,440,376	11.67%
Region VII	IA, KS, MO, NE	10,197,205	4.68%
Region VIII	CO, MT, ND, SD, UT, WY	7,442,827	3.41%
Region IX	AZ, CA, HI, NV	31,327,541	14.37%
Region X	AK, ID, OR, WA	9,178,081	4.21%

Source: State Population Projections: 2001 to 2005, U.S. Bureau of the Census, Population Division, Populations Projections Branch, www.census.gov/population/www/projections/st_yr01to05.html, (release date, November 2, 2000).

Once the sample had been geographically stratified with sample allocation proportionate to population distribution, a sample of assigned telephone banks was randomly selected from an enumeration of the Working Residential Hundreds Blocks of the active telephone exchanges within the region. The Working Residential Hundreds Blocks were defined as each block of 100 potential telephone numbers within an exchange that included 3 or more residential listings. (Exchanges with one or two listings were excluded because in most cases such listings represent errors in the published listings).

The use of residential listings to identify working residential exchanges is generally described as "list assisted" or "truncated" RDD sampling. In a series of empirical studies, Brick, et. al.¹, demonstrated that only about four percent of all telephone households are excluded in national samples using this method. In addition, these studies indicate that the differences between covered and uncovered samples are trivial in most instances. The principal advantage of "list assisted" sampling is that an equal probability systematic sample of telephone numbers can be selected under this procedure and the variances of estimates from the list-assisted sample are usually lower than those from a clustered design like the Mitovsky-Waksberg RDD method.

In the third stage sample, a two-digit number was randomly generated by computer for each Working Residential Hundreds Block selected in the second stage sample. This third stage sampling process is the random digit dialing (RDD) component. Every telephone number within the Hundreds Block has an equal probability of selection, regardless of whether it is listed or unlisted.

The third stage RDD sample of telephone numbers was then dialed by SRBI interviewers to determine which were currently working residential household phone numbers. Non-working numbers and non-residential numbers were immediately replaced by other RDD numbers selected within the same stratum in the same fashion as the initial number. Ineligible households (e.g., no adult in the household, language barriers other than Spanish) were also immediately replaced. Non-answering numbers were not replaced until the research protocol (in this study, a ten-call protocol) was exceeded.

Screening to Determine Household Eligibility

The sample construction process yielded a population-based, random digit dialing sample of telephone numbers. The systematic dialing of those numbers to obtain a residential contact yielded a random sample of telephone households. The next step was to select eligible households within the total sample of working numbers.

An adult respondent at each number drawn into the sampling frame was contacted about the composition of the household. Telephone numbers that yielded non-residential contacts such as businesses, churches, and college dormitories, were screened out. Only households, i.e., residences in which any number of related individuals or no more than five unrelated persons living together, were eligible for inclusion in the sample. This minimal screening was only to

2003 Motor Vehicle Occupant Safety Survey: Methodology

ascertain that the sample of telephone numbers reached by interviewers was residential households.

Selection of Respondent Within Household

The multi-stage sampling process described in the previous sections yielded a random national sample of households with telephones, drawn proportionate to the population distribution. The final stage required the selection of one respondent per household for the interview.

A systematic selection procedure was used to select one designated respondent for each household sampled. The "most recent/next birthday method" was used for within household selection among multiple eligibles. This procedure has been widely used for two decades because it permits unbiased systematic selection without requiring full household enumeration.² The Within Household Selection Procedure is presented in Figure 1. The CATI system alternated the "most recent" and "next" birthday specification for the selected respondent to avoid a temporal bias for birthdays before (or after) the field period.

Young Adult Over-Sample

The survey design specified an over-sample of 16-39 year olds in the achieved sample in order to permit more detailed analysis of this subset of the population. A random sample of all persons age 16 and over in an RDD sample of 6,000 households yields too few individuals in this range to allow very close examination. Therefore, to increase the sub-sample sizes of the 16-39 year olds, within a projectable national sample, an independent national sample was conducted of that population. The allocation of sample by region for the young adult over-sample was proportional to the regional distribution of that population. The household selection procedure through RDD was the same for the over-sample as for the national cross-sectional sample.

The screening criteria for the over-sample were different from the simple cross-section in that households were screened for persons age 16 to 39. This systematic screening of a national probability sample of households for a subset of the total household population should yield a random sample of that population. As in the case of the simple cross-sectional sample, if there was only one eligible respondent in the household then he or she was selected. If there was more than one eligible respondent, then the "most recent/next birthday" method of selection was used. The over-sample screener script is presented in Figure 2.

2003 Motor Vehicle Occupant Safety Survey: Methodology

Initial Contact

Initial telephone contact was attempted during the hours of the day and days of the week that have the greatest probability of respondent contact. The primary interviewing period was from 5:30 p.m. to 10:00 p.m. on weekdays, from 9:00 a.m. to 10:00 p.m. on Saturdays, and from 10:00 a.m. to 10:00 p.m. on Sundays (all times are local time). Since interviewing was conducted across time zones, the interviewing shift lasted until 1:00 a.m. Eastern Time (10:00 p.m. Pacific Time).

If the interview was not conducted at the time of initial contact, the interview was rescheduled at a time convenient to the respondent. Although initial contact attempts were made on evenings and weekends, daytime interviews were scheduled when necessary. If four telephone contacts on the night and weekend shifts did not elicit a household contact, the fifth contact was attempted on a weekday during the daytime.

Interviewers attempted a minimum of ten calls to each telephone number. When the household was reached, the interviewer asked to speak to an adult to screen the household for eligibility and to determine the designated respondent. When the designated respondent was reached but an interview at that time was inconvenient or inappropriate, interviewers set up appointments with respondents. When contact was made with the household, but the designated respondent was not available, interviewers probed for appropriate callback times for an appointment.

The contact protocol specified that the fifth call be made during weekdays. Messages were left on the answering machine on the fifth, seventh and ninth calls, if an answering machine was encountered on those attempts. The first answering machine message explained that the household had been selected as part of a USDOT study of American driving habits and attitudes, and asked the respondent to call SRBI's toll-free number to schedule an interview. The subsequent answering messages also included the DOT website where they could get more information about the study.

Spanish Language Interviews

Spanish language versions of the two survey instruments were developed in order to eliminate language barriers for a small proportion of the U.S. adult population. The questionnaires were translated into Spanish by a professional translation firm. The Spanish questionnaires were then back-translated to English by a different translator and checked for comparability. Any translations that were not comparable were revised to be accurate and precise to the original intent of the English questionnaire.

If the interviewer encountered a language barrier at the telephone number, either with the person answering the phone or with the designated respondent, the interviewer thanked the person and terminated the call. If the case was designated as Spanish language, it was turned over to the next available Spanish-speaking interviewer.

2003 Motor Vehicle Occupant Safety Survey: Methodology

All households in which a language barrier (Spanish) was encountered were assigned to a Spanish-speaking interviewer. These bilingual interviewers re-contacted the Spanish-speaking households to screen for eligibility and conduct interviews with eligible respondents.

Refusal Conversion

The process of converting terminations and refusals, once they had occurred, involved the following steps. First, there was a diagnostic period, when refusals and terminates were reported on a daily basis and the Project Director and Operations Manager reviewed them after each shift to see if anything unusual was occurring. Second, after enough time had passed to see a large enough sample of refusals and terminations, the Project Director and his staff developed a refusal conversion script. Third, the refusal conversion effort was fielded with reinterview attempts scheduled about a week after the initial refusal. Fourth, the Project Director and Operations Manager received the outcomes of the refusal conversion efforts on a daily basis. Minor revisions of the script and the procedures were made, as needed. The final refusal conversion script is shown in Figure 3, on the following two pages.

FIGURE 3
Refusal Conversion Script

Hello, my name is _____. I am a field supervisor with SRBI, a national research organization in New York. I believe that someone in your household may have been contacted by one of our interviewers concerning a public policy study that we are conducting for the U.S. Department of Transportation in Washington, D.C.

Yes, respondent.....1
Yes, other.....2
No, don't recall.....3

1. In order to assess the effectiveness of current traffic laws, the U.S. Department of Transportation is conducting a study of Americans' attitudes about current driving laws. It is a public opinion study that will help the government to consider traffic laws in light of what the public really wants and does. It only takes about fifteen minutes and it's strictly confidential.

Willing to proceed.....1 GO TO SELECTION GRID
Refuses.....2

2. I understand. My job as a field supervisor is to find out if there are any problems with our surveys or interviewers that are discouraging people from participating. Could you tell me if we have done something wrong or is there something about the interview that concerns you?

IF: I don't do surveys.

ANSWER: I understand, but this survey examines whether our traffic laws are realistic and appropriate in terms of what people really want and really do. The results may affect laws in your state. It is really important.

IF: I don't know if you are who you say you are.

ANSWER: I can give you our 800 number to call and confirm the authenticity of the study.

IF: I don't know how the results will be used.

ANSWER: The Department of Transportation has been charged to collect information about public opinion and behavior related to traffic laws, in order to assist them in determining whether certain laws should be changed or not. That's why we need to talk to you.

IF: I don't drive.

ANSWER: Then the interview should only take a few minutes. Even if you don't drive, we need to get your opinion about some traffic laws that may affect you as a pedestrian. We also need a little background about non-drivers, but it won't take long at all.

FIGURE 3
Refusal Conversion Script
(continued)

IF: Don't know enough.

ANSWER: This is an opinion survey about driving, traffic safety and traffic laws based on your experience. We need to talk to all kinds of people to get a true picture of what ordinary Americans think, not just what "experts" say.

IF: I don't want the government to know about me/ what I do.

ANSWER: The interview is strictly confidential. Your telephone number was selected at random. As soon as we complete the interview and verify it, we destroy the phone number. No one will ever know who you are. We do this so that you can be comfortable in telling us what you really think, not what you think the government wants to hear.

IF: It's a bad time.

ANSWER: We can schedule a callback for a time that would be good for you.

Date _____ Time _____

IF STILL HESITANT SAY:

It is really important that we represent the views and experience of people like yourself so that the findings will be fair and accurate. You don't often get a chance to participate in studies that may affect the laws in your community. It's really important and we really want to represent your household in the study. If now is a bad time, we can schedule the interview during the day, in the evening, or on the weekend whenever is better for you.

(IF SUGGESTS A TIME MORE THAN TWO WEEKS HENCE:
We are supposed to finish the study by the end of (February/March). Could we find some time this week (or next) to do the interview?)

Date _____ Time _____

IF AGREEABLE, GO TO THE SELECTION GRID.

IF STILL REFUSES, THANK AND COMPLETE.

Field Outcomes

Survey data collection by the Federal government requires prior approval by the Office of Management and Budget (OMB). Before submitting the formal request for data collection to OMB, NHTSA published a Notice in the Federal Register soliciting comments on the information collection. The Notice appeared in the Federal Register, 67:40, pages 9353-9354, February 28, 2002. No comments were received in response to the Notice. NHTSA then submitted the request for data collection to OMB. OMB approved the information collection on December 10, 2002, assigning it the OMB number 2127-0618 with an expiration date of December 31, 2003.

The field interviewing for the study commenced on January 8, 2003, following training of the field interviewers, and was completed on March 30, 2003. This was approximately the same length of field period as the 2000 Motor Vehicle Occupant Safety Survey (November 8, 2000 to January 21, 2001), the 1998 Motor Vehicle Occupant Safety Survey (November 8, 1998 to January 12, 1999), the 1996 Motor Vehicle Occupant Safety Survey (November 4, 1996 to January 5, 1997) and the 1994 Motor Vehicle Occupant Safety Survey (October 5, 1994 to December 11, 1994). However, the field period for the 2003 survey was moved to January to March in order to permit us to report results in the same calendar year as the data were collected. There was no reason to expect that the survey results would be affected by this change. Case status at the end of the field period was reported using the categories defined in Figure 4.

A total of 6180 interviews were conducted using Version 1, including 4677 for the cross-section and 1503 for the young adult over-sample. The average interview length for Version 1 was 21.7 minutes for the cross-section and 19.7 minutes for the over-sample. A total of 6197 interviews were completed using Version 2, including 4698 for the cross-section and 1499 for the young adult over-sample. The average interview length for Version 2 was 17.2 minutes for the cross-section and 17.8 minutes for the over-sample.

FIGURE 4
Sample Disposition Categories

NIS/DIS/Change #	The number was not in service, disconnected, or no longer an active number.
Non-residential	The number yielded a contact with a business, government agency, pay telephone, or other identifiable non-residential unit.
Computer/Fax	The number yielded an electronic tone indicating a fax machine or data line. A handful of other non-household numbers are included in this category.
Line problems	These represent dialing attempts that did not result in other standard outcomes and may be bad area codes, or other transient or permanent connection problems.
Probably unassigned	No answers, exclusively, were encountered on every contact over a period of several weeks until the study protocol (10 attempts) was reached.
Non-contact (max)	Answering machines or busy signals, as well as no answers, were encountered on all contact attempts until the study protocol (10 attempts) was reached.
No answer/busy	No household contact ever achieved, but less than 10 attempts. Ring, no answer or repeated busy signal on last attempt.
Answering machine	No household contact ever achieved, but less than 10 attempts. An answering machine was reached at the telephone number.
Language barrier	The interview could not be completed because of language barriers other than Spanish (which was treated as Spanish callback).
Health/Deaf	The designated respondent was unable to participate due to health or deafness.
Away for duration	The designated respondent was out of the area for the entire field period.
Screen-Outs	Households whose eligible participants did not meet the 16-39 age requirement in the over-sample version.
Quota Outs	Households whose eligible participants had met the gender by region quotas.
Callback	Contact was made with the household, but not necessarily the designated respondent
Refusal -- Initial	Someone in the household refused before selection of a designated respondent.
Refusal -- Second	Either an extremely strong initial refusal or a second refusal was encountered during refusal conversion, but before selection of a designated respondent.
Qualified Callback	The designated respondent had neither completed, nor refused an interview.
Refusal – Qualified	The designated respondent refused to participate in the survey.
Terminate	A respondent began the interview but refused to finish.
Complete	An interview was completed with the designated respondent.

2003 Motor Vehicle Occupant Safety Survey: Methodology

For survey Version 1 - Seat Belt Usage Issues, a total of 53,366 randomly selected telephone numbers were sampled within a geographically stratified national sampling frame for both sample components (the cross-section age 16 and older and the over-sample of persons age 16-39):

- 47% of the numbers were not active residential phone numbers, including 32% pre-screened or individually dialed Not-In-Service or Disconnected Numbers; 8% Business Numbers; and 6% computer, fax, cell phone or child phone lines;
- 17% of the numbers had reached the maximum number of contacts (10 attempts) and were still in no answer, answering machine or callback status, including 6% that were probably unassigned numbers because they were consistently no answers on all ten dialing attempts; and
- 1% were households in which the designated respondent was not interviewable (away for an extended period, incapacitated, or deaf) and an additional 1% were non-interviewable due to language barriers (non-Spanish).

At the close of the field period, only 1,675 cases (3%) were in callback status and an additional 1,460 cases (3%) were no answers or answering machines with less than 10 attempts.

The participation rate represents one of the most critical measures of potential sample bias because it indicates the degree of self-selection by potential respondents into or out of the survey. The participation rate is calculated as the number of completed interviews (including respondents who screen-out or quota out as ineligible) divided by the combined total number of completed interviews, terminated interviews, and refusals to interview. The participation rate for Version 1 is based on the following elements:

- 6,180 completed interviews;
- 510 cases in which someone in the household completed the household screen, but no one in the household was interviewed because the quota for that region or gender had already been filled;
- 5,321 cases in which someone in the household completed the household screen, but no one in the household was found to be eligible for the full interview because of age-related screen-outs among the age 16-39 over-sample; and
- 3,131 refusals to be interviewed (including 1,610 second or hard refusals and 119 terminated interviews).

Based on the standard calculations of participation rate, the participation rate for Version 1 was 79.3%. The response rate³ (40.0%) was lower because it included all presumed eligible households in the denominator. Response rate was a measure of sample coverage. The Final Summary Disposition of the Version 1 sample is given in Table 3. The table includes breakouts for each survey component (national cross-section and the age 16-39 over-sample).

³ Response Rate 3 (RR3) from the American Association for Public Opinion Research, Standard Definitions: Final Dispositions of Case Codes and Outcome Rates for Surveys, 2004, was used as the basis for this calculation.

2003 Motor Vehicle Occupant Safety Survey: Methodology

For survey Version 2 - Child Safety Seat Issues, a total of 44,327 randomly selected telephone numbers were sampled within a geographically stratified national sampling frame for both sample components (the cross-section age 16 and older and the over-sample of persons age 16-39):

- 47% of the numbers were not active residential phone numbers, including 33% pre-screened or individually dialed not-in-service or disconnected numbers; 8% business numbers; and 6% computer, fax, cell phone, or child phone lines;
- 12% of the numbers had reached the maximum number of contacts (10 attempts) and were still in no answer, answering machine or callback status, including 2% that were probably unassigned numbers because they were consistently no answers on all ten dialing attempts; and
- 1% were households in which the designated respondent was not interviewable (not available, away for an extended period, incapacitated, or deaf) and an additional 1% were non-interviewable due to language barriers (non-Spanish).

At the close of the field period, only 1,314 cases (3%) were in callback status and an additional 3,546 cases (8%) were no answers or answering machines with less than 10 attempts.

The participation rate for Version 2 is based on the following elements:

- 6,197 completed interviews;
- 245 cases in which someone in the household completed the household screen, but no one in the household was interviewed because the quota for that region or gender had already been filled;
- 3,894 cases in which someone in the household completed the household screen, but no one in the household was found to be eligible for the full interview because of age-related screen-outs among the age 16-39 over-sample; and
- 2,658 refusals to be interviewed (including 1,280 second or hard refusals and 196 terminated interviews).

Based on the standard calculations of participation rate, the participation rate for Version 2 was 79.5 percent. The response rate⁴ (44.9%) was lower because it included all presumed eligible households in the denominator. Response rate was a measure of sample coverage. The Final Summary Disposition of the Version 2 sample is given in Table 4, on the next page. The table includes breakouts for each survey component (national cross-section and the age 16-39 over-sample).

⁴ Response Rate 3 (RR3) from the American Association for Public Opinion Research's Standard Definitions: Final Dispositions of Case Codes and Outcome Rates for Surveys, 2004, was used as the basis for this calculation.

Sample Weighting

The characteristics of a perfectly drawn sample of a population will vary from true population characteristics only within certain limits of sample variability (i.e., sampling error). Unfortunately, social surveys do not permit perfect samples. The sampling frames available to survey research are less than perfect. The absence of perfect cooperation from sampled units means that the completed sample will differ from the drawn sample. In order to correct these known problems of sample bias, the achieved sample is weighted to certain characteristics of the total population. Each of the survey samples was weighted separately.

The weighting plan for the survey was a multi-stage sequential process of weighting the achieved sample to correct for sampling and non-sampling biases in the final sample. The first stage in the sample weighting procedures was designed to correct the cases in the completed sample for known selection biases in the sampling procedures. At the household selection stage, a random digit dialing process will give households with more than one telephone number an unequal likelihood of selection. Nationally, about 18% of households selected by random digit dialing will have more than one telephone number. This selection bias was corrected by giving each household a first stage weight equal to the inverse of the number of different telephone numbers in the household, up to a maximum of three phone numbers.

The second step in the weighting process was to correct for selection procedures that yielded unequal probability of selection within sampled households. Although the survey was designed as a population survey, only one eligible person per household could be interviewed (because multiple interviews per household are burdensome and introduce additional design effects into the survey estimates). A respondent's probability for selection is inverse to the size (number of other eligible adults) of the household. Hence, the second stage weight was equal to the number of eligible respondents within the household.

The next step in the weighting process was to correct the study design for deliberate disproportionate selection of younger population subsets in the sample design. The survey included both a cross-sectional sample of 4,500 respondents, aged 16 and older, and an over-sample of 1,500 persons, aged 16 to 39 years old. Hence, the total achieved sample yielded a disproportionate sample distribution by age. A third stage weight was used to correct the achieved sample for disproportionate sampling by dividing the expected population distribution, based on Census projections, by the achieved sample distribution on the stratification variables. Specifically, the third stage weight corrected the sample to the cell distribution of the population for five cohorts (16-20, 21-29, 30-39, 40-64 and 65 or older) by gender, using the Census Population Projections for Age, Sex and Race for 1998.

2003 Motor Vehicle Occupant Safety Survey: Methodology

The final step in the weighting process was designed to correct for the fact that the total number of cases in the weighted sample was larger than the unweighted sample size because of the use of the number of eligibles weight. In order to avoid misinterpretation of sample size, the total number of cases in the unweighted sample was divided by the total number of cases in the weighted sample to yield a sample size weight. When this weight is applied, the size of the weighted sample is identical to the size of the unweighted sample.

The final weight (WEIGHT6) incorporates all of the intermediate weighting steps described above. The final weight adjusts the total completed interviews in the achieved sample to correct for known sampling and participation biases, while maintaining the unweighted sample size.

Precision of Sample Estimates

The objective of the sampling procedures used on this study was to produce a random sample of the target population. A random sample shares the same properties and characteristics of the total population from which it is drawn, subject to a certain level of sampling error. This means that with a properly drawn sample we can make statements about the properties and characteristics of the total population within certain specified limits of certainty and sampling variability.

The confidence interval for sample estimates of population proportions, using simple random sampling without replacement, is calculated by the following formula:

$$z * \left[se(x) = \sqrt{\frac{(p * q)}{(n - 1)}} \right]$$

Where:

$se(x)$ = the standard error of the sample estimate for a proportion

p = some proportion of the sample displaying a certain characteristic or attribute

q = $(1 - p)$

n = the size of the sample

z = the standardized normal variable, given a specified confidence level (1.96 for samples of this size)

The sample sizes for the surveys are large enough to permit estimates for sub-samples of particular interest. Table 5, on the next page, presents the expected size of the sampling error for specified sample sizes of 12,000 and less, at different response distributions on a categorical variable. As the table shows, larger samples produce smaller expected sampling variances, but there is a constantly declining marginal utility of variance reduction per sample size increase.

TABLE 5
Expected Sampling Error (Plus or Minus)
At the 95% Confidence Level

NOTE: Entries are expressed as percentage points (+ or -)

2003 Motor Vehicle Occupant Safety Survey: Methodology

However, the sampling design for this study included a separate, concurrently administered over-sample of youth and young adults (age 16-39). Both the cross-sectional sample and the over-sample of the youth/younger adult population were drawn as simple random samples; however, the disproportionate sampling of the age 16-39 population introduces a design effect that makes it inappropriate to assume that the sampling error for total sample estimates will be identical to those of a simple random sample.

In order to calculate a specific interval for estimates from a sample, the appropriate statistical formula for calculating the allowance for sampling error (at a 95% confidence interval) in a stratified sample with a disproportionate design is:

$$ASE = 1.96 \sqrt{\sum_{h=1}^g W_h^2 \left\{ (1 - f_h) \left(\frac{s_h^2}{n_h - 1} \right) \right\}}$$

where:

ASE	=	allowance for sampling error at the 95% confidence level;
h	=	a sample stratum;
g	=	number of sample strata;
W _h	=	stratum h as a proportion of total population;
f _h	=	the sampling fraction for group h - the number in the sample divided by the number in the universe;
s ² _h	=	the variance in the stratum h - for proportions this is equal to p _h (1.0 - p _h);
n _h	=	the sample size for the stratum h.

Although Table 5 above provides a useful approximation of the magnitude of expected sampling error, precise calculation of allowances for sampling error requires the use of this formula. To assess the design effect for sample estimates, we calculated sampling errors for the disproportionate sample for a number of key variables using the above formula. These estimates were then compared to the sampling errors for the same variables, assuming a simple random sample of the same size. The two strata (h¹ and h²) in the disproportionate sample were all respondents age 16-39 and all respondents age 40 and over respectively. The proportion for the 16-39 year old stratum (w¹) was 53.0 percent while the proportion for the 40 and over stratum (w²) was 47.0 percent.

As shown in Table 6, the disproportionate sampling increases the confidence interval by an average of 0.7 percent, compared to a simple random sample of the same size. This means the sample design slightly decreases the sampling precision for total population estimates, while increasing the precision of sampling estimates for the sub-sample aged 16-39 years old. Since the average difference in the confidence interval between the stratified disproportionate sample and a simple random sample is less than one percentage point, the sampling error table for a simple random sample will provide a reasonable approximation of the precision of sampling estimates in the survey.

TABLE 6
Design Effect on Confidence Intervals for Sample Estimates

Estimating Statistical Significance

The estimates of sampling precision presented in the previous section yield confidence bands around the sample estimates, within which the true population value should lie. This type of sampling estimate is appropriate when the goal of the research is to estimate a population distribution parameter. However, the purpose of some surveys is to provide a comparison of population parameters estimated from independent samples (e.g. annual tracking surveys) or between subsets of the same sample. In such instances, the question is not simply whether or not there is any difference in the sample statistics that estimate the population parameter, but rather is the difference between the sample estimates statistically significant (i.e., beyond the expected limits of sampling error for both sample estimates).

To test whether or not a difference between two sample proportions is statistically significant, a rather simple calculation can be made. The maximum expected sampling error (i.e., confidence interval in the previous formula) of the first sample is designated $s1$ and the maximum expected sampling error of the second sample is $s2$. The sampling error of the difference between these estimates is sd and is calculated as:

$$sd = \sqrt{(s1^2 + s2^2)}$$

Any difference between observed proportions that exceeds sd is a statistically significant difference at the specified confidence interval. Note that this technique is mathematically equivalent to generating standardized tests of the difference between proportions.

An illustration of the pooled sampling error between sub-samples for various sizes is presented in Table 7. This table can be used to determine the size of the difference in proportions between drivers and non-drivers or other sub-samples that would be statistically significant.

TABLE 7. Pooled Sampling Error Expressed as Percentages for Given Sample Sizes (Assuming P=Q)

Comparisons Between Samples

In order to permit statistical comparisons between the two samples, the data sets from the two separate samples were merged together on like questions. The sample versions (Version 1 for Safety Belt Usage and Version 2 for Child Safety Seats) were cross-tabulated with each of the survey questions that had been asked in an equivalent fashion in the two samples. A chi-square test was conducted for each of these cross-tabulations to test for the independence of the samples.

An exact test of independence was calculated to test the differences between the two samples. Pearson's chi-square is a widely used statistic to test the hypothesis that the row and column variables are independent. It is calculated by summing over all cells the squared residuals divided by the expected frequencies. The calculated chi-square is compared to the critical points of the theoretical chi-square distribution to produce an estimate of how likely (or unlikely) this calculated value is, indicating if the two variables are in fact independent. This probability is also known as the observed significance level of the test. If the probability is small (greater than 0.05), the hypothesis that the two variables are independent is rejected.

No statistically significant difference (at the .05 level) was found between the two samples on most of the vehicle characteristics (e.g., type of vehicle driven most often, airbags in vehicle, location of airbags, type of seatbelts in vehicle), driver behaviors (e.g., drive everyday, ever injured in crash), or demographic characteristics (White, Black, Hispanic, gender, marital status, interview conducted in Spanish).

There are, nonetheless, a limited set of differences large enough to be statistically significant with samples of this size. The proportion of drivers who always wear their shoulder belts is slightly higher in Version 1 (84.1%) than in Version 2 (82.1%), as is the proportion that always wears lap belts (83.2%-81.2%). Although the combined use (always) of any seatbelt is also slightly higher in Version 1 (84.6%) compared to Version 2 (82.8%), when the measure is limited to those who have always worn their seatbelt in the past year the difference (70.8%-69.4%) is no longer statistically significant. The proportion of the sample with at least some college education (57.8%-55.4%) and incomes of \$75,000 or more (25.0%-22.1%) is also slightly higher in Version 1 than in Version 2. These demographic differences in the two samples are consistent with the slight differences in seatbelt usage in the two samples.

INTRODUCTION

Hello, I'm _____ calling for the U.S. Department of Transportation. We are conducting a national study of Americans' driving habits and their attitudes about current driving laws. The interview is completely confidential.

DUMMY QUESTION FOR BIRTHDAY QUESTIONS

Has had the most recent.....1

Will have the next.....2

IF SAMPLE TYPE EQ 1, ASK A, ELSE ASK B.

- A. In order to select just one person to interview, could I speak to the person in your household, 16 or older, who (has had the most recent/will have the next) birthday?

Respondent is the person.....1

Other respondent comes to phone.....2

Respondent is not available.....3

Refused.....4

SKIP TO Q1

SKIP TO D

ARRANGE CALLBACK

IF SAMPLE TYPE EQ 2 ASK B

- B. Is there anyone aged 16 to 39 years old living in your household?

Yes.....1

No.....2 **THANK AND SCREEN OUT**

- C. Could I speak to the person aged 16 to 39 years old living in your household who (has had the most recent/will have the next) birthday?

Respondent is the person.....1

Other respondent comes to phone.....2

Respondent not available.....3

Refused.....4

ARRANGE CALLBACK

- D. Hello, I'm _____ calling for the U.S. Department of Transportation. We are conducting a national study of Americans' driving habits and their attitudes about current driving laws. The interview is completely confidential. It takes fifteen to twenty minutes. Could we begin now?

CONTINUE INTERVIEW.....1
Arrange Callback.....2
Refused.....3

SKIP TO Q1
CALLBACK

D1. Would you please tell me why you do not want to do the interview?

Q1 How often do you drive a motor vehicle? Almost every day, a few days a week, a few days a month, a few days a year, or do you never drive?

Almost every day/every day..1	
Few days a week.....2	
Few days a month.....3	
Few days a year.....4	
Never.....10	SKIP TO Q30
Other.....11	
(SPECIFY)	
(VOL) Don't know.....12	
(VOL) Refused.....13	

Q2 Not including driving to and from work, do you at least sometimes drive a vehicle as part of a job or business?

Yes.....1	
No.....2	SKIP TO Q5
Don't work.....3	SKIP TO Q5
(VOL) Don't Know.....4	SKIP TO Q5
(VOL) Refused.....5	SKIP TO Q5

Q3 How often do you drive a vehicle as part of a job or business? Almost every day, a few days a week, a few days a month, or a few days a year?

Almost every day/every day.....1	
Few days a week.....2	
Few days a month.....3	
Few days a year.....4	
(VOL) Never.....5	
Other.....6	
(SPECIFY)	
(VOL) Don't know.....7	
(VOL) Refused.....8	

Q4 Does your company or business have a policy requiring seat belt use when driving on the job?

Yes.....1	
No.....2	SKIP TO Q5
(VOL) Don't Know.....3	SKIP TO Q5
(VOL) Refused.....4	SKIP TO Q5

Q4a Is that a written policy?

Yes.....1	
No.....2	
(VOL) Don't Know....3	
(VOL) Refused.....4	

Q4b How strictly does your company enforce its policy about wearing seat belts? Is the policy enforced....

Very strictly.....1	
Somewhat strictly.....2	
Not too strictly.....3	
Not at all.....4	SKIP TO Q5
(VOL) Don't Know...5	SKIP TO Q5
(VOL) Refused.....6	SKIP TO Q5

Q4c How does your company enforce its seatbelt policy?

Q5 Now I'd like you to think about all the driving you do (whether or not it's part of your job). Is the vehicle you drive most often a car, van, motorcycle, sport utility vehicle, pickup truck, or other type of truck?

(NOTE: IF RESPONDENT DRIVES MORE THAN ONE VEHICLE OFTEN, ASK:)
"What kind of vehicle did you LAST drive?"

Car.....	1
Van or minivan.....	2
Motorcycle.....	3
Pickup truck.....	4
Sport utility vehicle (Jeep/Explorer/Trooper/etc).....	5
Other (specify _____).....	10
Other truck (SPECIFY _____).....	11
(VOL) Don't know.....	12
(VOL) Refused.....	13

IF Q5=MOTORCYCLE, SKIP TO Q30, ELSE GO TO Q6

Q6 For the next series of questions, please answer only for the (car/truck/van) you said you usually drive. Do the seat belts in the front seat of the (car/truck/van) go across your shoulder only, across your lap only, or across both your shoulder and lap?

INTERVIEWER INSTRUCTION: SEATBELT QUESTIONS REFER TO DRIVER-SIDE BELTS.

Across shoulder.....	1	SKIP TO Q9
Across lap.....	2	SKIP TO Q13
Across both.....	3	
Vehicle has no belts.....	4	SKIP TO Q25
(VOL) Don't know.....	5	SKIP TO Q14
(VOL) Refused.....	6	SKIP TO Q14

Q7 Are the shoulder and lap belt one piece or are they two separate belts?

One piece.....	1	SKIP TO Q9
Two separate belts.....	2	
(VOL) Don't know.....	3	
(VOL) Refused.....	4	

Q8 Are both the shoulder and lap belt automatic, is only the shoulder belt automatic or is neither the shoulder or lap belt automatic?

Both are automatic.....	1	SKIP TO Q10
Only shoulder is automatic.....	2	SKIP TO Q10
Neither are automatic.....	3	SKIP TO Q11
(VOL) Don't know.....	4	SKIP TO Q11
(VOL) Refused.....	5	SKIP TO Q11

Q9 Is the shoulder belt automatic or do you have to fasten it?

Automatic.....	1	
Manual.....	2	SKIP TO Q11
(VOL) Don't know.....	3	SKIP TO Q11
(VOL) Refused.....	4	SKIP TO Q11

Q10 When you drive, do you always wear your automatic belt or is it ever disconnected, disabled, or placed behind you?

Always wear it.....	1
Disconnected.....	2
Disabled.....	3
Placed behind me.....	4
(VOL) Don't know.....	5
(VOL) Refused.....	6

Q11 Shoulder belts are usually attached to the door or frame behind the driver's left shoulder. In some vehicles, this attachment can be moved up or down to adjust the shoulder belt. Is this attachment adjustable in your vehicle?

Yes, adjustable.....	1	
No, not adjustable.....	2	SKIP TO Q12
Don't Know.....	3	SKIP TO Q12
Refused.....	4	SKIP TO Q12

Q11a Have you ever tried to adjust it?

Yes.....	1	
No.....	2	SKIP TO Q11c
(VOL) Don't Know....	3	SKIP TO Q12

| (VOL) Rechaza | 4 |

Q42a ¿Cuál piensa que debe ser la multa mínima por la primera infracción de los cinturones de seguridad?
 [CANTIDAD DE LA MULTA (Rango 0-1000); Sin multa/aviso.....0;
 No sabe's (VOL).....1001]

Q42b ¿Cuál piensa que debe ser la multa mínima por las infracciones repetidas de los cinturones de seguridad?
 [CANTIDAD DE LA MULTA (Rango 0-1000); Sin multa/aviso.....0;
 No sabe's (VOL).....1001]

Q43 ¿Está a favor o en contra de recibir puntos en su licencia de conducir como multa por las infracciones de cinturones de seguridad?

- A favor.....1
- En contra.....2
- Depende de las infracciones pasadas.....3
- (VOL) No sabe4
- (VOL) Rechaza5

Q44 Me gustaría que pensara en alguien a quien conoce que no utiliza el cinturón de seguridad siempre. Si pararan a esa persona y le pusieran una multa de \$%OFINE% por no llevar el cinturón de seguridad, ¿utilizaría esta persona el cinturón más frecuentemente, probablemente definitivamente utilizaría esta persona el cinturón de seguridad con más frecuencia o probablemente no cambiaría sus hábitos de uso del cinturón de seguridad?

- Seguro que lo utilizaría con más frecuencia.....1
- Probablemente lo utilizaría con más frecuencia.....2
- Probablemente no cambiaría sus hábitos de uso de cinturón de seguridad.....3
- (VOL) Puede que haya un cambio a corto plazo, pero no un cambio a largo plazo.4
- (VOL) No estoy seguro(segura).....5
- (VOL) No conozco a nadie así.....6
- (VOL) Rechaza.....7

Q45 Suponga que le ponen una multa por no utilizar el cinturón de seguridad.
 ¿Cuál de las siguientes afirmaciones describe mejor su reacción probable?

- Me merezco la multa porque violé la ley, o.....1
- NO me merezco la multa porque el uso del cinturón de seguridad debería ser la decisión del individuo.2
- (VOL) No sabe3
- (VOL) Rechaza4

Q46 Las preguntas siguientes son acerca de las leyes sobre el uso del cinturón de seguridad en su estado.

¿Tiene [+oempty+] una ley que obligue al uso del cinturón de seguridad?

- Sí.....1
- No.....2
- (VOL) No sabe3
- (VOL) Rechaza4

Q47 ¿A quién se le obliga a utilizar el cinturón de seguridad según la ley de su estado?)'

Q47_1 ¿Se les obliga a los/las
 a. Conductores/conductoras a utilizar el cinturón de seguridad?

- Sí.....1
- No.....2
- (VOL) No sabe3
- (VOL) Rechaza4

Q47_2 ¿Se les obliga a
b. los/las niños/niñas en el asiento delantero a utilizar el cinturón de seguridad?

Sí.....1
No.....2
(VOL) No sabe3
(VOL) Rechaza4

Q47_3 ¿Se les obliga a
c. los/las niños/niñas en el asiento trasero a utilizar el cinturón de seguridad?

Sí.....1
No.....2
(VOL) No sabe3
(VOL) Rechaza4

Q47_4 ¿Se les obliga a
d. los/las pasajeros/pasajeras adultos/adultas del asiento delantero a utilizar el cinturón de seguridad?

Sí.....1
No.....2
(VOL) No sabe3
(VOL) Rechaza4

Q47_5 ¿Se les obliga a
e. los/las pasajeros/pasajeras adultos/adultas del asiento trasero a utilizar el cinturón de seguridad?

Sí.....1
No.....2
(VOL) No sabe3
(VOL) Rechaza4

Q48 Según la ley de su estado, ¿puede parar la policía a un vehículo si ve una infracción del uso del cinturón de seguridad o tienen que detectar otra infracción primero para parar al vehículo?

Puede parar sólo por infracción del uso del cinturón de seguridad...1
Tiene que detectar otra infracción primero.....2
(VOL) No sabe3
(VOL) Rechaza4

Q49 En su opinión, DEBERÍA permitirse a la policía parar vehículos si observa una infracción de uso del cinturón de seguridad si no hay ninguna otra infracción de las leyes de tráfico?

Debería permitírsele parar.....1
No debería.....2
(VOL) No sabe3
(VOL) Rechaza4

Q49a La mayoría de las otras leyes sobre el tráfico permite a la policía parar a un vehículo cada vez que vea una infracción. ¿Por qué piensa que las infracciones del uso del cinturón de seguridad se deberían tratar diferentemente de otras infracciones de tráfico?

NO LEER LISTA. ANOTACIÓN MÚLTIPLE

No suponen un riesgo para otros.....1
No es una infracción tan grave.....2
La policía abusa de ello.....3
Debería ser una opción personal.....4
Otra (ESPECIFICAR).....0
(VOL) No sabe1
(VOL) Rechaza2
Otra (ESPECIFICAR) 3 _____

Q49a La mayoría de las otras leyes sobre el tráfico permite a la policía parar a un vehículo siempre que vea una infracción. ¿Por qué piensa que las infracciones del uso del cinturón de seguridad se deberían tratar differentlyemente de otras infracciones de tráfico?

(MENTIONAR NÚMERO....)

Q50 En los últimos doce meses, desde %Q50TXT% del año pasado, ¿le ha parado la policía por CUALQUIER razón que tuviera que ver con el tráfico mientras conducía?

Sí.....	1
No.....	2
(VOL) No sabe	3
(VOL) Rechaza	4

Q50a ¿Utilizaba el cinturón de seguridad cuando le pararon?

(SI LE PARARON MÁS DE UNA VEZ EN LOS ÚLTIMOS 12 MESES, PREGUNTAR SOBRE LA MÁS RECIENTE)

Sí.....	1
No.....	2
(VOL) No sabe	3

(VOL) Rechaza.....	6

Q55 Ahora le voy a leer varias afirmaciones. Por favor, dígame usted si está muy de acuerdo, algo de acuerdo, algo en desacuerdo o muy en desacuerdo.)'

Me gustaría hacerle varias preguntas sobre límites de velocidad.

Q57 En general, ¿piensa usted que la mayoría de los límites de velocidad de las autopistas son demasiado bajos, demasiado altos o aproximadamente correctos?

Demasiado bajos.....	1
Demasiado altos.....	2
Aproximadamente correctos.....	3
(VOL) No sabe.....	4
(VOL) Rechaza.....	5

Q58 ¿Y qué opina sobre los límites de velocidad residenciales o que no sean en autopistas? ¿Cree que son demasiado bajos, demasiado altos o aproximadamente correctos?

Demasiado bajos.....	1
Demasiado altos.....	2
Aproximadamente correctos.....	3
(VOL) No sabe.....	4
(VOL) Rechaza.....	5

Q59 ¿Usted cree que la conducción de la mayoría de los/las otros/otras conductores/conductoras es ... (LEER LISTA)

EXCELENTE.....	1
MUY BUENA.....	2
BUENA.....	3
ACEPTABLE.....	4
MALA.....	5
(VOL) No sabe	6
(VOL) Rechaza	7

Q60 ¿Con cuánta frecuencia se siente presionado por parte de otros/otras conductores/conductoras para que conduzca por encima del límite de velocidad? (LEER LISTA)

CON MUCHA FRECUENCIA.....	1
CON FRECUENCIA.....	2
RARAMENTE.....	3
NUNCA.....	4
(VOL) No sabe	5
(VOL) Rechaza	6

Q61 ¿Qué afirmación describe mejor su conducción en autopista.

- 1 > TIENDO A ADELANTAR A OTROS COCHES CON MÁS FRECUENCIA QUE OTROS COCHES ME ADELANTAN, O
 2 > OTROS COCHES TIENDEN A ADELANTARME CON MÁS FRECUENCIA

Tiendo a adelantar a otros coches con más frecuencia que otros coches me adelantan a mí.....	1
Otros coches tienden a adelantarme a mí con más frecuencia... (VOL) Ninguna, conduzco parecido a la mayoría de los/las otros/otras.....	2
3	
(VOL) No conduzco en autopistas.....	4
(VOL) No sabe	5
(VOL) Rechaza.....	6
(VOL) Ambas, esto es, tiendo a adelantar y otros tienden a adelantarme.....	7

Q62 En general, ¿a qué velocidad conduce en autopista?
 [RANGO: 40 A 120 MPH; No conduce en autopista = 997;
 No sabe^s =998; Rechazada^s =999]

Ahora me gustaría hacerle varias preguntas sobre los airbags.

Q63 ¿Tiene el/la que usted conduce normalmente airbag?

Sí.....	1
No.....	2
(VOL) No sabe	3
(VOL) Rechaza	4

Q64 ¿Tiene ese/esa airbag delante del/de la conductor/conductora?

- | | |
|--|---|
| Sólo para el conductor..... | 1 |
| Para el conductor y pasajero/pasajera delantero/delantera... | 2 |
| (VOL) No sabe | 3 |
| (VOL) Rechaza | 4 |

Q65 ¿Tiene ese/esa airbag delante de donde iría un/una pasajero/pasajera en el asiento delantero?

- | | |

| Sí..... | 1 |
| No..... | 2 |
| (VOL) No sabe | 3 |
| (VOL) Rechaza | 4 |

Q65a ¿Tiene ese/esa airbag en algún otro sitio?

(SI SÍ: ¿DÓNDE?) ¿Dónde más? (ANOTACIÓN MÚLTIPLE; LEER SI ES NECESARIO)

- | | |
|---|---|
| En las puertas del coche cercanas al asiento delantero..... | 1 |
| En las puertas del coche cercanas al asiento trasero..... | 2 |
| Cortina descendiente encima de la puerta delantera..... | 3 |
| Cortina descendiente encima de la puerta trasero..... | 4 |
| En el asiento delantero..... | 5 |
| En el asiento trasero..... | 6 |
| Añadir luego(7)..... | 7 |
| Añadir luego(8)..... | 8 |
| Sí, pero no sé dónde..... | 9 |
| Otra (ESPECIFICAR)..... | 0 |
| No..... | 0 |
| (VOL) No sabe | 1 |
| (VOL) Rechaza | 2 |
| Otra (ESPECIFICAR)..... | 3 |

Q65A ¿Hay algún airbag en algún otro sitio de su.....?

(Q65A MENCIONAR NÚMERO....)

Q66 Si está conduciendo un vehículo que tiene airbag y usted tiene un accidente que involucra daños importantes del vehículo, ¿es probable o improbable que usted sufra daños?

- | | |
|--|---|
| Probable..... | 1 |
| Improbable..... | 2 |
| (VOL) Depende del tipo de accidente..... | 3 |
| (VOL) No sabe | 4 |
| (VOL) Rechaza | 5 |

Q67 Por favor, dígame si usted está DE ACUERDO o EN DESACUERDO con la siguiente afirmación. Si mi coche tiene %Q67TXT1% airbag(s) lateral(es), no necesito utilizar mi cinturón de seguridad al %Q67TXT2%.

- | | |
|---------------------|---|
| DE ACUERDO..... | 1 |
| EN DESACUERDO..... | 2 |
| (VOL) No sabe | 3 |
| (VOL) Rechaza | 4 |

Q71 ¿Preferiría usted que su próximo vehículo tenga airbag para el/la CONDUCTOR/CONDUCTORA solamente, airbag para el/la CONDUCTOR/CONDUCTORA Y PASAJERO/PASAJERA o que no tenga airbags?

- | | |
|---|---|
| Conductor/Conductora | 1 |
| Conductor/Conductora y pasajero/pasajera..... | 2 |
| Sin airbags..... | 3 |
| (VOL) No sabe | 4 |
| (VOL) Rechaza | 5 |

Q72 ¿Tiene alguna preocupación sobre la seguridad de los airbags?

- | | |
|---------------------|---|
| Sí..... | 1 |
| No..... | 2 |
| (VOL) No sabe | 3 |
| (VOL) Rechaza | 4 |

Q72a ¿Cuáles son esas preocupaciones (sobre la seguridad de los airbags)?

Q73 En general, ¿se siente usted más seguro/segura en coches con airbags, aproximadamente igual o menos seguro/segura en coches con airbags?

- | | |
|---|---|
| Más seguro/segura en vehículos a motor con airbags..... | 1 |
| Aproximadamente igual..... | 2 |
| Menos seguro/segura en coches con airbags..... | 3 |
| (VOL) No sabe | 4 |
| (VOL) Rechaza | 5 |

Q78 Ahora le voy a hacer varias preguntas sobre el consumo de alcohol. Durante los últimos 30 días, ¿ha tomado al menos una copa de bebida alcohólica, incluyendo licor, cerveza, vino o wine coolers?

- | | |
|---------------------|---|
| Sí..... | 1 |
| No..... | 2 |
| (VOL) No sabe | 3 |
| (VOL) Rechaza | 4 |

Q79 ¿Ha tomado alguna bebida alcohólica durante los últimos 12 meses?

Q103 La mayoría de las leyes de tráfico permite a la policía parar a un vehículo cada vez que vea una infracción. ¿Por qué cree usted que las infracciones del uso del cinturón de seguridad se deben tratar de manera diferente de las otras infracciones de tráfico? (MENTIONAR NÚMERO....)

Q104 ¿Está usted casado/casada, divorciado/divorciada, viudo/viuda, separado/separada o no se ha casado nunca?

Casado/casada.....	1
Divorciado/divorciada.....	2
Viudo/viuda.....	3
Separado/separada.....	4
No se ha casado nunca.....	5
Miembro de una pareja sin casar	6
(VOL) Rechazada	7

Q105 ¿Cuál es el curso o año académico más alto que ha completado?

Octavo grado o menos.....	8
Noveno grado.....	9
Décimo grado.....	0
Undécimo grado.....	1
Duodécimo grado/GED.....	2
Algo de universidad.....	3
Graduado/graduada de universidad o más alto.....	4
(VOL) Rechazada	5

Q106 ¿Cuál de las siguientes categorías define mejor los ingresos totales de su casa antes de impuestos en 1999?
(Incluir los ingresos de todas las personas de la casa.) Los ingresos totales de su casa fueron de [LEER LISTA]

Menos de 5.000 dólares.....	1
5.000 a 14.999 dólares	2
15.000 a 29.999 dólares.....	3
30.000 a 49.999 dólares.....	4
50.000 a 74.999 dólares.....	5
75.000 a 99.999 dólares.....	6
100.000 dólares o más.....	7
(VOL) No sabe	8
(VOL) Rechaza	9

Q107 Actualmente, ¿es usted empleado/empleada asalariado/asalariada, autoempleado/autoempleada, desempleado/desempleada, amo/ama de casa, estudiante, jubilado/jubilada o incapacitado/incapacitada para trabajar? [ANOTACIÓN MÚLTIPLE]

Empleado/empleada asalariado/asalariada.....	1
Autoempleado/autoempleada	2
Sin trabajo.....	3
Amo/ama de casa.....	4
Estudiante.....	5
Jubilado/jubilada.....	6
Incapacitado/incapacitada para trabajar.....	7
(VOL) Rechaza	8

Q107 Actualmente, ¿es usted empleado/empleada, asalariado/asalariada, autoempleado/autoempleada, desempleado/desempleada, amo/ama de casa, estudiante, jubilado/jubilada o incapacitado/incapacitada para trabajar?
(MENTIONAR NÚMERO....)

Para entender mejor las características de conductor/conductora y pasajero/pasajera, nos gustaría preguntarle su peso y altura.

Q108 ¿Cuál es aproximadamente su estatura sin zapatos?

- | | |
|---------------------|---|
| Respondió..... | 1 |
| (VOL) No sabe | 2 |
| (VOL) Rechaza | 3 |

Q108a ¿Aproximadamente, cuánto mide usted sin zapatos?
[ANOTAR PIES]

Q108B Aproximadamente, cuánto mide usted sin zapatos?
[ANOTAR PULGADAS]

Q109 ¿Cuánto pesa usted? [LIBRAS]
[No sabe^s =998 ; Rechazada^s =999]

Q110 Sin incluir buscas y mensáfonos, ¿tiene más de un número de teléfono en su casa en los que pueda recibir llamadas telefónicas entrantes?

- | | |
|---------------------|---|
| Sí..... | 1 |
| No..... | 2 |
| (VOL) Rechaza | 3 |

Q110a ¿Cuántos números de teléfono distintos tiene usted en esta residencia en los que puede recibir normalmente llamadas telefónicas entrantes?
[10 O MÁS=10 ; No sabe^s =11 ; Rechazada^s =12]

State: _____ County: _____ Metro Status: _____

Date: _____ CATI ID: _____

Interviewer: _____

Telephone Number: _____

Time Start: _____ Time End: _____ TOTAL TIME: _____

QA. Para seleccionar sólo una persona a quien encuestar ¿Podría hablar con la persona de la casa que tenga más de 16 años?

Quien responde es la persona.....1

Otra persona que coge el teléfono2

Quien responde no está disponible.....3

(VOL) Rechazada.....4

Esas son todas las preguntas que tengo para usted . Gracias por su tiempo.

QB. ¿Hay alguien de entre 15 y 39 años de edad que viva en su casa?

Sí.....1

No.....2

Esas son todas las preguntas que tengo para usted . Gracias por su tiempo.

QC. ¿Puedo hablar con alguien que tenga entre 15 y 39 años de edad que viva en su casa?

Quien responde es la persona.....1

Otra persona que coge el teléfono. responde.....2

Quien responde no está disponible.....3

(VOL) Rechazada.....4

Esas son todas las preguntas que tengo para usted . Gracias por su tiempo.

QD. Hola, me llamo %INAME% y llamo en nombre del Departamento de Transporte de los Estados Unidos. Estamos llevando a cabo un estudio nacional sobre los hábitos de conducir de los americanos y sobre las actitudes acerca de las leyes de circulación actuales. La encuesta es completamente confidencial. Dura de quince a veinte minutos.

¿Podemos empezar ahora?

CONTINUAR ENTREVISTA.....1

Programar nueva llamada.....2

(VOL) Rechazada.....3

QD1. ¿Por favor, me puede decir por qué no quiere hacer la encuesta?

Respondió.....1

(VOL) No sabe.....2

(VOL) Rechazada.....3

Esas son todas las preguntas que tengo para usted . Gracias por su tiempo.

Q138 POR OBSERVACIÓN, ANOTE EL SEXO DE QUIEN RESPONDE

Hombre.....1

Mujer.....2

Q1 ¿Con qué frecuencia conduce un vehículo a motor? ¿Casi todos los días, varios días a la semana, varios días al mes, varios días al año o nunca?

Casi todos los días.....	1
Varios días a la semana.....	2
Varios días al mes.....	3
Varios días al año.....	4
Nunca.....	0
Otra (ESPECIFICAR)^o.....	1
(VOL) No sabe.....	2
(VOL) Rechazada.....	3
Otra (ESPECIFICAR)	4

Q2 . ¿El vehículo que conduce más frecuentemente es un coche, una Furgoneta o "minivan", una moto, un vehículo utilitario deportivo u otro tipo de camión? (NOTA: SI QUIEN RESPONDE CONDUCE MÁS DE UN VEHÍCULO CON FRECUENCIA, PREGUNTAR:) "¿Cuál ha sido el ÚLTIMO vehículo que ha conducido?"

Coche.....	1
Furgoneta o minivan.....	2
Motocicleta.....	3
Camioneta descapotable (pick up truck).....	4
Vehículo utilitario deportivo (Jeep/Explorer/Trooper/etc)...5	
Otro (ESPECIFICAR)^o.....	0
Otra camioneta (ESPECIFICAR)^o.....	1
(VOL) No sabe^s.....	2
(VOL) Rechazada^s.....	3
Otro (ESPECIFICAR)	4

Q3 Cuando se compró el/la, ¿era nuevo/nueva o usado/usada?

Nuevo/nueva.....	1
Usado/usada.....	2
(VOL) No sabe.....	3
(VOL) Rechazada.....	4

INSTRUCCIÓN PARA QUIEN HACE LA ENCUESTA: LAS PREGUNTAS SOBRE EL CINTURÓN DE SEGURIDAD SE REFIEREN A LOS CINTURONES DEL LADO DEL CONDUCTOR.

Q4 Para la próxima serie de preguntas, por favor responda solamente para el/la que dice que conduce habitualmente. ¿Los cinturones de seguridad del/de la van por el hombro solamente, por el regazo solamente, tanto por el hombro como por el regazo?

Por el hombro.....	1
Por el regazo	2
Por ambos.....	3
El vehículo no tiene cinturones.....	4
(VOL) No sabe.....	5
(VOL) Rechazada.....	6

Q5 ¿Son los cinturones del hombro y del regazo de una pieza o son dos cinturones divididos?

Una pieza	1
Dos cinturones divididos.....	2
(VOL) No sabe^s.....	3
(VOL) Rechazada^s.....	4

Q6 ¿Son los cinturones del hombro y del regazo automáticos, sólo el del hombro es automático o ninguno de los dos es automático?

Ambos son automáticos.....	1
Sólo el del hombro es automático.....	2
Ninguno es automático.....	3
(VOL) No sabe^s.....	4
(VOL) Rechazada^s.....	5

Q7 ¿Es el cinturón del hombro automático o se lo tiene que poner usted?

- | | |
|------------------------|---|
| Automático..... | 1 |
| Manual..... | 2 |
| (VOL) No sabe^s..... | 3 |
| (VOL) Rechazada^s..... | 4 |

Q8 Cuando conduce, ¿lleva siempre el cinturón, o está alguna vez desconectado, desactivado o puesto detrás de usted?

- | | |
|------------------------|---|
| Siempre lo llevo..... | 1 |
| Desconectado..... | 2 |
| Desactivado..... | 3 |
| Detrás de mí..... | 4 |
| (VOL) No sabe^s..... | 5 |
| (VOL) Rechazada^s..... | 6 |

Q9 Al conducir este/esta, ¿con qué frecuencia lleva puesto el cinturón del hombro... (LEER LISTA)

- | | |
|--------------------------------|---|
| TODO EL TIEMPO | 1 |
| LA MAYOR PARTE DEL TIEMPO..... | 2 |
| PARTE DEL TIEMPO..... | 3 |
| RARAMENTE O | 4 |
| NUNCA..... | 5 |
| (VOL) No sabe^s..... | 6 |
| (VOL) Rechazada^s..... | 7 |

Q10 Al conducir este/esta, ¿con qué frecuencia lleva puesto el cinturón del regazo... (LEER LISTA)

- | | |
|--------------------------------|---|
| TODO EL TIEMPO | 1 |
| LA MAYOR PARTE DEL TIEMPO..... | 2 |
| PARTE DEL TIEMPO..... | 3 |
| RARAMENTE O | 4 |
| NUNCA..... | 5 |
| (VOL) No sabe^s..... | 6 |
| (VOL) Rechazada^s..... | 7 |

Q11 ¿Cuándo fue la última vez que NO llevaba puesto el cinturón de seguridad (ni el del hombro ni el del regazo) mientras conducía?

- | | |
|--|---|
| Hoy | 1 |
| Durante la semana pasada..... | 2 |
| Durante el mes pasado..... | 3 |
| Durante los últimos 12 meses..... | 4 |
| Hace un año o más / siempre lo llevo puesto..... | 5 |
| (VOL) No sabe^s..... | 6 |
| (VOL) Rechazada^s..... | 7 |

Q11a ¿ En los últimos 12 meses hubo alguna vez que no se abrocho o puso el cinturón de seguridad (ni el del hombro ni el del regazo) mientras conducía?

- | | |
|------------------------|---|
| Sí..... | 1 |
| No..... | 2 |
| (VOL) No sabe^s..... | 3 |
| (VOL) Rechazada^s..... | 4 |

Q12 Para hacerle la siguiente serie de preguntas, necesito saber cuántos niños/niñas MENORES DE 16 AÑOS viven en su casa al menos la mitad del tiempo o la consideran su residencia principal?

[NÚMERO (Rango 0-8); NINGUNO/A = 0; No sabe = 98; Rechazada=99]

Q14a ¿Qué edad tiene el/la %Q14ATXT% (de 16 años o menos) Que vive en su casa? (ANOTE EL AÑO MÁS CERCANO) [NOTA: GEMELOS O MELLIZOS (TRILLIZOS, ETC.) SE DEBEN ANOTAR SEPARADAMENTE, EL/LA MÁS JOVEN, PRIMERO]

0 =	Menos de 1 año	9 =	9 años
1 =	1 año	10 =	10 años
2 =	2 años	11 =	11 año
3 =	3 años	12 =	12 años
4 =	4 años	13 =	13 años
5 =	5 años	14 =	14 años
6 =	6 años	15 =	15 años
7 =	7 años	15 =	(VOL) Rechazada
8 =	8 años		

Q14b ¿Es %Q14BTXT% niño o niña?

Niño.....	1
Niña.....	2
(VOL) Rechazada.....	3

Q14c ¿Cuál es la relación entre %Q14BTXT% y usted?

Hijo/hija/hijastro/hijastra.....	1
Nieto/nieta.....	2
Hermano/hermana.....	3
Otro/otra pariente.....	4
Sin parentesco.....	5
(VOL) Rechazada.....	6

Q15 ¿Conduce alguna vez con el/la %Q15TXT% Que acaba de mencionar en su?

Sí, un/una niño/niña de la casa.....	1
Sí, más de un/una niño/niña.....	2
No.....	3
(VOL) No sabe.....	4
(VOL) Rechazada^s.....	5

Q15 ¿Con quien de los/las niños/niñas menores de nueve años conduce algunas veces ? (ANOTAR DEBAJO LA EDAD DE CADA NIÑO/NIÑA CON QUIEN CONDUCE AL MENOS A VECES) (MENTIONAR NÚMERO....)

Menos de 1 año.....	1
1 año.....	2

Q24 (viene de la página anterior)

- | | |
|--|---|
| (VOL) Nunca monta en coche..... | 0 |
| (VOL) Nunca conduce con el/la niño/niña en el coche. | 1 |
| (VOL) No sabe^s..... | 8 |
| (VOL) Rechazada^s..... | 9 |

Q24a ¿Hubo alguna vez en los últimos 12 meses en que el/la no viajo en asiento de seguridad cuando usted conducía?

- | | |
|------------------------|---|
| Sí..... | 1 |
| No..... | 2 |
| (VOL) No sabe^s..... | 3 |
| (VOL) Rechazada^s..... | 4 |

Q25 Cuando el/la está asegurado/asegurada en el asiento de seguridad para niño/niña , ¿hay cintas (correas) por ambos hombros, una (correa) cinta por solamente un hombro o no hay ninguna (correa) cinta por ningún hombro?

- | | |
|---|---|
| Dos cintas.(correas)..... | 1 |
| Una cinta....(correa)..... | 2 |
| Ninguna cinta..... | 3 |
| (VOL) Nunca utiliza asiento de seguridad niño/niña..... | 4 |
| (VOL) No sabe^s..... | 5 |
| (VOL) Rechazada^s..... | 6 |

Q26 Cuando usted conduce y el/la viaja en el asiento de seguridad niño/niña para coche, ¿va %HESHE% normalmente en el asiento delantero o en el trasero?

- | | |
|--|---|
| Asiento delantero..... | 1 |
| Asiento trasero..... | 2 |
| (VOL) Nunca utiliza asiento de seguridad niño/niña para coche..... | 3 |
| (VOL) No sabe^s..... | 4 |
| (VOL) Rechazada^s..... | 5 |

Q26a ¿Está el asiento de seguridad normalmente detrás del/de la conductor/conductora, detrás del pasajero/de la pasajera o en el centro del asiento trasero?

- | | |
|--|---|
| Detrás del/de la conductor/conductora..... | 1 |
| Detrás del/de la pasajero/pasajera..... | 2 |
| En el centro | 3 |
| (VOL) No sabe^s..... | 4 |
| (VOL) Rechazada^s..... | 5 |

Q27 Cuando conduce usted y el/la va en el asiento de niño/niña para coche, ¿está [+heshe+] normalmente mirando adelante o atrás?

- | | |
|------------------------|---|
| Adelante..... | 1 |
| Atrás..... | 2 |
| (VOL) No sabe^s..... | 3 |
| (VOL) Rechazada^s..... | 4 |

ENCUESTADOR/ENCUESTADORA: Repetir la pregunta y si sigue diciendo "mirando atrás", preguntar la edad del /de la niño/niña y tomar nota.

Q28 ¿Se puede utilizar el asiento en posición mirando hacia adelante solamente, mirando hacia atrás solamente o en ambas posiciones?

- | | |
|---|---|
| Mirando hacia adelante solamente..... | 1 |
| Mirando hacia atrás solamente..... | 2 |
| Mirando hacia adelante o hacia atrás..... | 3 |
| (VOL) No sabe^s..... | 4 |
| (VOL) Rechazada^s..... | 5 |

Q29 ¿Cuántos días de los últimos treinta viajó el/la en un vehículo conducido por usted?
 [DÍAS: (Rango=0-30) ; No sabe=31 ; Rechazada=32]

Q30 Durante los últimos treinta días, ¿ha viajado el/la en un vehículo donde conducía alguien de fuera de su domicilio (incluye autobús del colegio, taxis y otros vehículos privados)?

- Sí.....1
 No.....2
 (VOL) No sabe^s.....3
 (VOL) Rechazada^s.....4

Q30a Durante los últimos treinta días, ¿ha viajado el/la en un vehículo donde conducía alguien de fuera de su domicilio?
 [(Rango=0-30) ; No sabe=31 ; Rechazada=32]

Q30b ¿Quiénes fueron esos/esas conductores/conductoras? (Cuál es su relación con el niño/la niña?)
 (ANOTACIÓN MÚLTIPLE)

- Padre/madre/padrastro/madrastra.....1
 Hermano/hermana.....2
 Abuelo/abuela.....3
 Otros pariente.....4
 Cuidador/cuidadora diurno/diurna.....5
 Padre/madre de amigos.....6
 Otra persona no pariente.....7
 (VOL) No sabe^s.....8
 (VOL) Rechazada^s.....9

Q30b ¿Quiénes fueron esos/esas conductores/conductoras? (Cuál es su relación con el niño/la niña?)
 (MENTIONAR NÚMERO....)

Q31 ¿Dónde diría que es el lugar más seguro para poner el asiento de seguridad niño/niña en el vehículo...en el asiento delantero o en el asiento trasero?

- Asiento delantero.....1
 Asiento trasero.....2
 (VOL) Depende del tipo de asiento de niño/niña para coche.....3
 (VOL) No sabe^s.....4
 (VOL) Rechazada^s.....5

Q32 Algunos asientos de seguridad para niño/niña están diseñados para que el niño/la niña mire hacia la parte trasera del vehículo . Suponga que un niño/una niña viaja en un asiento de seguridad niño/niña mirando hacia atrás. Si el vehículo tiene un airbag bolsa de aire lateral en el lado del pasajero/de la pasajera, ¿es seguro o inseguro tener el asiento de seguridad niño/niña para coche en el asiento delantero?

- Seguro.....1
 Inseguro.....2
 No tiene idea de cómo funcionan los airbags.....3
 (VOL) No sabe^s.....4
 (VOL) Rechazada^s.....5

Q33 Y pensando ahora de nuevo en el asiento de seguridad niño/niña para coche en que el/la normalmente viaja ¿compró el asiento de seguridad para niño/niña para coche nuevo o usado?

- Nuevo.....1
 Usado.....2
 (VOL) No sabe^s.....3
 (VOL) Rechazada^s.....4

Q34 ¿Compró el asiento de seguridad para niño/niña para coche, lo consiguió como regalo o se los prestó un parente o lo consiguió en un programa de préstamo?
