

Part V - Counties

South Carolina is comprised of 46 counties, each with its own unique set of demographic, geographic, and political characteristics. These and other factors influence events within a county's borders. Using this information, planners can tailor specific countermeasures to the unique situation of a given county. Crime, economic activity, accidents and the subject of this book (traffic collisions) are all affected by these characteristics. On the following pages, a summary of each county's traffic collision characteristics is provided. Among other facts, this data shows the following for 2004:

- ◆ Charleston County had the most traffic collisions with 13,150. This total was just slightly more than the number two and three counties, Greenville (11,863) and Richland (11,420).
- ◆ Greenville County had the most fatal collisions with 75 reported during the year, followed by Horry with 57. Greenville had the most traffic fatalities, with 87. Horry was second, with 64 traffic fatalities.
- ◆ Charleston County had the most injury collisions and persons injured, with 3,543 and 5,259, respectively, in 2005. Richland County was next with 2,802 injury crashes and 4,423 injuries.
- ◆ The high number of collisions in Horry, Charleston and Richland Counties is largely a result of the large populations and larger amounts of travel within each of these counties.
- ◆ The counties with the highest collision and fatality rates were the rural counties. Jasper County, for example, had 26 fatal collisions in 2005. It ranked twelfth among the 46 counties in the number of fatalities. However, with its population death rate at 149.5 deaths per 100,000 persons continues to make it by far the leading county in the state. Calhoun County was second with a death rate of 86.1 per 100,000 population.
