NOTICE

Prepared for by the Department of Transportation, National Highway Traffic Safety Administration, under Contract No. DOT-HS-8-02057. This document is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for the contents or use thereof.
This final report describes the planning and implementing details of the Child Restraint Workshop series. A child restraint workshop was conducted in each of the ten NHTSA regions. The purpose of the workshops was to improve the effectiveness of grassroots organizations in ongoing child restraint programs, to begin coordination efforts within the states, and to involve other grass root supports to increase the number of organizations actively involved in the child passenger safety area.

During each two day workshop representatives from various service organizations, health care professions, state legislatures and law enforcement along with highway safety officials were presented with facts about the extent of the problem and its solution followed by discussion of the various types of programs which promote child restraint usage - legislative, education and distribution.

Volume I contains details about the planning and implementation of the workshops. Workshop planning details include selection of dates and locations, identification of participants, determination of program format and content, and preparation of workshop materials. Implementation details include an extensive outline of workshop topics and highlights, and the trends of each particular workshop. Also included are recommendations to NHTSA based on the problems and successes of the planning, implementing, and follow-up to the workshops.

Volume II, Ongoing and Planned Programs, contains a brief description of ongoing and planned child restraint programs across the country. (Continued on next page)
16. Abstract (Continued)

The information is based on workshop interaction, follow-up of workshop participants, and other sources.

Volume III, Workshop Handout Material, (available for viewing at NHTSA Headquarters in Washington, D.C.) contains all of the material on child restraints distributed to workshop participants. Also included in Volume III is additional child restraint information which was on display in a scrapbook at each workshop.

Volume IV, Roster List of Workshop Series' Nominees, (listed copies available through NHTSA-NTS14) contains the names and addresses of all persons submitted as possible invitees to the workshops. The names are arranged by region and state.

INTRODUCTION

Motor vehicle accidents are the leading cause of death for children between the ages of one and four. In 1977, 920 children under the age of five were fatally injured while riding in automobiles (National Safety Council, 1978). Indeed data from some states (e.g., Hall & Council, 1978) indicate that a child under five years of age is approximately 40-50 times more likely to die in automobile crashes than from all of the common childhood diseases combined (i.e., rubella, measles, polio, and diphtheria), diseases which parents and health care professionals carefully protect children from through immunizations.

There is an "immunization" or preventive medicine which exists for the epidemic of injury and deaths resulting from automobile crashes--the well designed and correctly used infant car carriers and child safety seats. With proper use in a crash, such devices reduce the risk of fatal injury by 70-90 percent (National Highway Traffic Safety Administration, 1979; Scherz, 1978). This means that for every 100 children who died in motor vehicle crashes, 80 would still be alive if their parents had buckled them up properly. Recent studies (Hall et al., 1978; Philpot, Heathington, Perry, & Hughes, 1976; National Highway Traffic Safety Administration, 1979; Scherz, 1978) show, however, that less than 10 percent of children under 10 are properly restrained when riding in cars. Ms. Joan Claybrook, National Highway Traffic Safety Administration (NHTSA) Administrator, emphasized the nature of the problem when announcing new standards for child restraint devices: "What happens to small children who are unrestrained in a crash is that they literally become flying missiles. All we can do is to issue a standard which will make sure these devices are properly constructed, but the important thing is that they be used" (Insurance Institute for Highway Safety, 1979).
With knowledge of the low levels of usage, NHTSA went beyond the issuance of new standards. It recognized the fact that there are many organizations across the nation working on the problem, but saw very little coordination or communication between the groups, and under the assumption that the United Nations declaration for a worldwide renewal of commitment to the welfare of children created a favorable climate for promoting child restraint usage, NHTSA initiated a series of ten regional workshops concerning child restraints which would:

1. Improve the effectiveness of grass roots organizations in ongoing child restraint programs
2. Begin coordination efforts within the states
3. Involve other grassroot supports to increase the number of organizations actively involved in the child passenger safety area.

By helping workshop participants share information about effective approaches, giving them access to audio-visual and print materials, providing them with up-to-date technical information, and giving them visible recognition for their past and current efforts, NHTSA hoped to maximize their ability to be effective agents for promoting child restraint usage.

HSRC was awarded the NHTSA contract to conduct the workshop series. A child restraint workshop was conducted in each of the ten NHTSA regions.
Ongoing and Planned Programs

During the course of the child restraint workshops each participant was given an opportunity to discuss any child restraint program in which she/he was involved. This included both ongoing and planned educational programs, distribution programs, and programs in the legislative or regulatory areas. Participants discussed the working details of their program as well as any needs and problems that had occurred.

As a follow-up to the workshops, each workshop participant was contacted by telephone and asked to provide information about her/his involvement in current or planned programs—educational, distribution, legislation. They were asked a series of questions depending on which type of program they were involved in. (Guide forms for follow-up Contacts with Participants can be found in Appendix A.). Because of time and cost considerations, workshop attendees from outside the continental United States were not telephoned but were mailed forms to be completed and returned to HSRC.

The workshop participants were contacted by student assistants at HSRC in late July and early August. While the student assistants were instructed as to how to ask the questions and record the information given to them, in most cases the students were not familiar with the subject matter.

Because of time limitations it was not possible to survey each workshop participant. In cases where it was known that more than one person was involved in the same program, only one person was called. Others were not contacted because HSRC was unable to obtain a telephone number or they were not available when called. Because the phone calls were made during office hours (Eastern Daylight Time), HSRC was unable to reach as many people on the west coast as in the east, central and mid-west portions of the United States.
The information obtained from the subsequent follow up of participants, workshops, and other sources were compiled to provide a brief description of as many ongoing and planned educational and distribution programs as possible. It was necessary to take several special situations into account in compiling the information. For example, in some cases the same program may have been described by more than one person. In matching the same programs we often found conflicting answers. HSRC either eliminated both answers or made a judgment as to which answer was accurate by reviewing answers to other questions. In other cases, one person may have been involved in more than one program. Some of the information obtained was incomplete and was, therefore, not included in the program descriptions. This happened most often when the student assistants asked participants about their planned programs. The answers in some cases were extremely vague. HSRC concluded that these programs were only in the "hopefully we'll have a program stage" and not far enough along in their planning and implementing for HSRC to provide any definitive information in planned program descriptions. The information obtained was reviewed and interpreted to provide as accurate an account as possible of the programs.

Table 1 provides an overall picture of the number of educational and distribution programs in each state and region. The number of programs listed in the table is based on the workshop follow up, workshop interaction, and other sources. Programs that are just in the preliminary planning stages as well as programs for which incomplete information was obtained are included.

This volume contains a brief description of each educational and distribution program on which information was gathered. The programs are arranged by program area and regions. The program information provided in this section gives only an initial overview of the programs. More detailed information can be obtained from the contact person listed for each program.

APPENDIX A

Guides for Follow-Up Contact with Participants
Existing Education Programs

1. When did your program begin? _______ (month) _______ (year)

2. If it started _______ (month) _______ (year) how long is it scheduled to last? (e.g., six months, one year, continual)

3. Is this effort part of a larger, more encompassing safety education program? (e.g., accident prevention program, automobile safety program)  
   Yes  No

3a. If yes, explain

4. Is any organization or agency providing your program funding?  Yes  No

4a. If yes, who? ________________________________
   (Name of organization(s) only)

5. Are you trying to educate the general public?  Yes  No

6. Are you trying to educate a specific target group?  Yes  No

6a. If yes, identify specific target group (check as many as needed)
   ____ health professionals
   ____ prospective parents and parents of newborns (in hospital clinic/setting)
   ____ parents in local community (for service groups)
   ____ prospective parents or parents of my private practice
   ____ other (identify)

7. How do you reach the target group and by what method do you instruct? (e.g., via prenatal classes with one hour instruction and demonstration by registered nurse)
   (e.g., flyers posted in daycare centers, churches)
   (e.g., radio, T.V. public service announcements)

 ________________________________

8. Have you developed any educational/instructional materials regarding child restraints?  __ Yes  __ No

8a. If yes, what form of materials? (e.g., pamphlet, fact sheet, flyer)

9. Are you using any material that was developed by another organization such as films, slide presentations, pamphlets?  __ Yes  __ No

9a. If yes, please identify the organization who developed the material and what the material is.

10. In your educational efforts, how much emphasis do you place on the proper installation and use of restraints?

11. Do you place more emphasis on the safety aspects of restraints or on the fact that they make children behave better?

12. Have you done any evaluation to see if your program has been a success?  __ Yes  __ No

12a. If yes, describe evaluation process (e.g., any control groups, etc.) and any results.
13. Any comments about your program? (problems, uniqueness, future plans) 

14. Who is the overall program coordinator?

Name

Title

Organization/agency

Mailing Address

(City) (State) (Zip)

Phone No. ( )

15. Could you provide HSKC with a copy of materials you have developed and any evaluation forms and written results?

Mail to: Ms. Linda Desper
