16. Abstract: The goal of this project was to lay the groundwork for Oregon to be prepared to lead in the implementation of a connected vehicle/cooperative systems transportation portfolio, and/or to avoid being caught by surprise as developments in this area evolve quickly. The project assessed ODOT's internal mechanisms for addressing connected vehicle/cooperative systems, scanned, reviewed and assessed the technical maturity of potential connected vehicle/cooperative system applications, developed preliminary goals, linked to prospective connected vehicle/cooperative systems applications, and refined/ranked/prioritized those that fit with potential ODOT role in advancing/leading these initiatives. The project identified opportunities for linking ODOT's current programs with national and international connected vehicle/cooperative system research, testing and deployment initiatives, and recommended a final shared vision and "road map" for Oregon's priority connected vehicle/cooperative system applications. This volume contains a detailed inventory and literature review of a set of 64 connected vehicle/cooperative system end user applications (with a focus on the U.S.) that are mature enough for deployment in the context of total fleet penetration. Each application was analyzed across a range of criteria including benefits, impact, maturity, interface and infrastructure requirements, vehicle component requirements, applicability to Oregon, as well as communications and data requirements. The inventory of connected vehicle/cooperative systems was performed in the context of ODOT/statewide goals, and in response to applications and initiatives being developed by U.S. DOT, AASHTO and the private sector. Comparisons to European applications are also included in this volume.

## **ACKNOWLEDGEMENTS**

The project team is grateful to the Technical Advisory Committee members for their valuable feedback and input. Kerry Malone of TNO in the Netherlands graciously provided valuable results from a similar study conducted for the European Commission. We also appreciate the roles that Myra Sperley and Brooke Jordan played on the project in its earlier stages. Many ODOT staff also contributed their time and ideas to the project, and we owe its success to their input.

## 1.0 INTRODUCTION

Through a detailed literature review the research team has identified, inventoried and document a set of connected vehicle/cooperative system end user applications (with a focus on the U.S.) that are mature enough for deployment in the context of total fleet penetration. This has included a global review of the rationale for choosing DSRC as the safety communications technology. The team has worked with ODOT staff to inventory connected vehicle/cooperative systems in the context of ODOT/statewide goals, and in response to applications and initiatives being developed by U.S. DOT, AASHTO and the private sector. This has also included a comprehensive review of connected vehicle application considered in Europe. The research team has created a list of opportunities for aligning connected vehicle/cooperative systems opportunities with the ODOT project lifecycle (from policy and planning through implementation and maintenance).

We began (Figure 1.1) with the U.S. DOT list of 55 Connected Vehicle Applications aimed at the Connected Vehicle Pilot Deployment Program ([http://www.its.dot.gov/pilots/cv\\_pilot\\_apps.htm](http://www.its.dot.gov/pilots/cv_pilot_apps.htm)).

### Connected Vehicle Applications

Over the last five years, application prototyping and assessment has been a focus of federal connected vehicle research and development activity. As a result of these efforts, more than three dozen connected vehicle applications concepts have been developed, many through prototyping and demonstration. As a part of this process, the component application development programs have also conducted assessments to measure of safety, mobility, and environmental impacts. Field demonstrations have been supplemented by estimation of difficult to observe impacts and potential future impacts from broader application deployment using a range of analytical methods. The USDOT has published documentation from the more advanced application development efforts, including concepts of operations, system requirements, design documents, algorithms, and source code associated with these prototypes. The table below lists the selected connected vehicle applications the USDOT sponsored. Pilot deployments build upon the DOT-sponsored research. A pilot deployment concept combines multiple USDOT application development efforts identified in the connected vehicle research effort.

Please click on the blue tab of each category for more detailed application descriptions and the supporting documentation.

Figure 1.1: U.S. DOT 55 Connected Vehicle Applications

We worked with the TAC and project stakeholders to expand the list to a final total of 64 applications as shown in Figure 1.2.

## CONNECTED VEHICLE APPLICATIONS

V2I Safety	Environment	Mobility
1. Signal Phase & Timing (SPAT)	23. Eco-Approach/Departure Intersections	46. Advanced Traveler Information System ( <a href="#">EnableATIS</a> )
2. Red Light Violation/Driver Gap Warning	24. Eco-Traffic Signal Timing	<i>Multimodal Intelligent Traffic Signal (MMITSS)</i>
3. Curve Speed Warning	25. Eco-Traffic Signal Priority	47. Intelligent Traffic Signal System (I-SIG)
4. Stop Sign Violation/Gap Assist	26. Connected Eco-Driving	48. Signal Priority (Transit & Freight)
5. Spot Weather Impact Warning	27. Wireless Inductive/Resonance Charging	49. Mobile Accessible Pedestrian Signal (PED-SIG)
6. Pedestrian Warning	28. Eco-Lanes Management	50. Emergency Vehicle Preemption (PREEMPT)
7. Railroad Crossing Warning	29. Eco-Speed Harmonization	<i>Intelligent Network Flow Optimization (INFL0)</i>
8. Disabled/Oversized Vehicle Warning	30. Eco-Cooperative Adaptive Cruise Control	51. Dynamic Speed Harmonization (SPD-HARM)
V2V Safety	31. Eco-Traveler Information	52. Queue Warning (Q-WARN)
9. Emergency Electronic Brake Lights (EEBL)	32. Eco-Ramp Metering	53. Cooperative Adaptive Cruise Control (CACC)
10. Forward Collision Warning (FCW)	33. Low Emissions Zone Management	54. Next Generation Ramp Metering (RAMP)
11. Intersection Movement Assist (IMA)	34. AFV Charging/Fueling Information	<i>Response, Incident, Emergency (RESCUME)</i>
12. Left Turn Assist (LTA)	35. Eco-Smart Parking	55. Incident Guidance Emergency Response (RESP-STG)
13. Blind Spot/Lane Change Warning (BSWLCW)	36. Dynamic Eco-Routing	56. Incident Scene Work Zone Alerts (INC-ZONE)
14. Do Not Pass Warning (DNPW)	37. Eco-ICM Decision Support System	57. Emergency Communications/Evacuation (EVAC)
15. Vehicle Turning Right in Front of Bus Warning	38. Dynamic Emissions Pricing	<i>Integrated Dynamic Transit Operations (IDTO)</i>
Agency Data	Road Weather	58. Connection Protection (T-CONNECT)
16. Probe-based Pavement Maintenance	39. Motorist Advisories & Warnings (MAW)	59. Dynamic Transit Operations (T-DISP)
17. Probe-enabled Traffic Monitoring	40. Enhanced Maintenance Decision Support	60. Dynamic Ridesharing (D-RIDE)
18. Vehicle Classification Traffic Studies	41. Vehicle Data Translator	<i>Freight Advanced Traveler Information (FRATIS)</i>
19. CV-enabled Performance Measures	42. Weather Response Traffic Info	61. Freight Dynamic Travel Planning & Performance
20. CV-enabled Turning/Intersection Analysis	Fee Payment	62. Drayage Optimization
21. CV-enabled O-D Studies	43. Tolling	Smart Roadside
22. Work Zone Traveler Information	44. High Occupancy Toll Lanes	63. Wireless Inspection
	45. Congestion Pricing	64. Smart Truck Parking

Figure 1.2: Final List of 64 Applications

Through a workshop held with key ODOT leadership, each of the applications listed above were assigned one of four possible priorities:

- **Priority 1: Near Term Focus for ODOT**
- **Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others**
- **Priority 3: Leadership by Others, ODOT Monitor**
- **Not on ODOT Priority List**

Table 1.1 contains the final list of ODOT connected vehicle applications that were analyzed. As shown, the table includes an application number, the priority color code, the source (most come from the U.S. DOT, while a few originate from the Connected Vehicle Reference Implementation Architecture and AASHTO), the application group, the application name, any applicable acronyms, a link to the relevant CVRIA application, and a reference to the ODOT Application Number selected in the final prioritization workshop (see Task 4 report).

## 2.0 CONNECTED VEHICLE APPLICATION INVENTORY/DICTIONARY

Each of the 64 selected connected vehicle applications is tabulated according the legend shown in Table 2.1.

**Table 2.1: Connected Vehicle Inventory/Dictionary Legend**

Row Label	Item Description
Title	Name of the application
CVRIA Reference	Name of application in the Connected Vehicle Reference Implementation Architecture (CVRIA) Hyperlink to CVRIA Application page.
Description	Description of the application
Category	Categorical function of the application
ODOT Application Number	Number reference used in ODOT prioritization workshop
Benefits/Impact	Application effects in terms of safety, efficiency, comfort, etc.
Maturity	Age within the industry
Interface Requirements	Interfaces that application runs on or through (e.g. driver to vehicle interface, roadside interface, etc.)
Infrastructure Requirements	Required infrastructure components for application to function
Vehicle Component Requirements	Vehicle-side components that are required for application to function
Applicability	Relevance to the state DOT perspective: <b>Priority 1: Near Term Focus for ODOT</b> <b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b> <b>Priority 3: Leadership by Others, ODOT Monitor</b> <b>Not on ODOT Priority List</b>
Physical RSE Installation	Whether or not physical roadside equipment (RSE) is required, and if so, if it is fixed or portable
Roadside Interface to Local	Whether the roadside interface to local systems is required, not, or optional
Backhaul Communications	Whether the backhaul communications are not needed, required, or optional
Backhaul Restrictions	Whether the backhaul restrictions are not available,

	exclusive, on limited domains, or unrestricted
<b>Mapping Support</b>	Resolution of the mapping support: none, road network, lane level, localized geometric
<b>Siting Dependency</b>	Whether or not the siting dependency is critical
<b>Management of Collected Data</b>	Whether or not collected data is managed
<b>Back Office Services/Applications</b>	Whether or not there are back office services and applications
<b>Latency</b>	Amount of network latency required: low, medium, high
<b>Vehicle Data Connection</b>	Whether or not a vehicle data connection is required
<b>Benefits vs. Deployment Level</b>	Whether benefits are realizable day one, or require threshold deployment level
<b>Other Dependency</b>	Whether or not if there are other dependencies such as privacy or policy
<b>Data Needs from OBU</b>	What data is needed from onboard unit (OBU): none, position, Basic Safety Message Part 1 (BSM1), BMS Parts 1 and 2 (BSM1+2), BSM1+2+other, BSM1+other, other
<b>Data Needs from Infrastructure</b>	What data is needed from the infrastructure: none, Traveler Information (TI), Signal Phase and Timing (SPaT), Geometric Intersection Descriptions/Maps (GIDs/Maps), SPaT/GIDs, App-specific
<b>Infographic</b>	U.S. DOT Infographic for the application, if available
<b>Other Images</b>	Optional row for other relevant images

## 2.1 VEHICLE TO INFRASTRUCTURE (V2I) SAFETY APPLICATIONS

**Table 2.2: V2I Safety ▶ Signal Phase & Timing**

<b>Title</b>	Signal Phase & Timing
<b>CVRIA Reference</b>	<a href="#">Signal Phase and Timing</a>
<b>Description</b>	Signal Phase and Timing Application is a support application that provides the current intersection signal light phases. The current state of all lanes at a single intersection are provided as well as any preemption or priority then follows in a structure for the whole intersection. This application is used to support a variety of V2I applications.
<b>Category</b>	Support Signal Phase & Timing
<b>ODOT Application Number</b>	<b>ODOT 11.</b>
<b>Benefits/Impact</b>	Signal Phase and Timing is an enabling application that will leverage existing installations at signalized intersections to facilitate a wide range of traffic signal related applications. Significant benefits and impacts are envisioned once this enabling platform is in place.

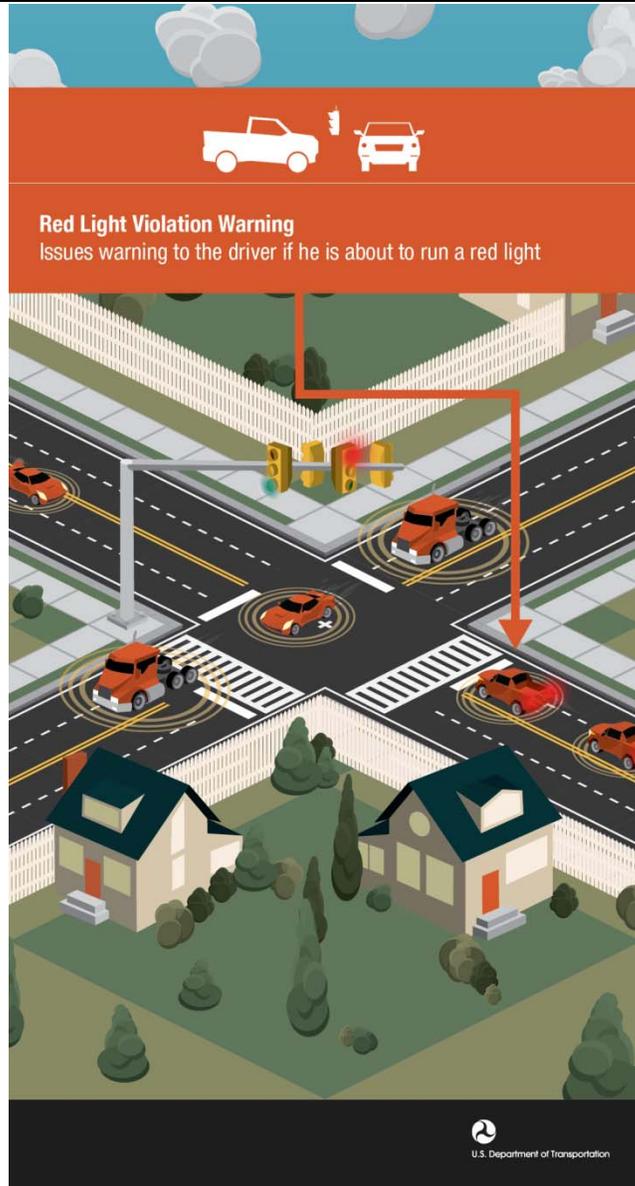

<b>Maturity</b>	Traffic signals are widespread and Signal Phase and Timing demonstrations are underway around the U.S. and internationally.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	SPaT Application (intersection GID, count of detected vehicles, information on each detected vehicle i.e. position, speed, and heading, minor road vehicle data i.e. position and heading, infrastructure signage information).
<b>Vehicle Component Requirements</b>	
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	SPaT
<b>Infographic</b>	None

**Table 2.3: V2I Safety ▶ Red Light Violation Warning**

<b>Title</b>	Red Light Violation Warning (RLVW)
<b>CVRIA Reference</b>	<a href="#">Red Light Violation Warning</a>
<b>Description</b>	The advantage of a cooperative RLVW used in infrastructure-to-vehicle communication is that it can react before, instead of after, an event occurs ( <i>U.S. DOT 2015a</i> ).
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The application in the vehicle uses the vehicle’s speed and acceleration profile, along with the signal timing and geometry information to determine if it appears the vehicle will enter the intersection in violation of a traffic signal laws for that state. If the violation seems likely to occur, a warning can be provided to the driver.
<b>Maturity</b>	Red light enforcement systems already are in widespread use. In-vehicle warning systems have been tested and the individual technology components are mature but the system as a package has not yet been deployed.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure RLVW Application (intersection GID, count of detected vehicles, information on each detected vehicle i.e. position, speed, and heading, minor road vehicle data i.e. position and heading, infrastructure signage information).
<b>Vehicle Component Requirements</b>	Vehicle RLVW Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Critical
<b>Management of Collected Data</b>	No

<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	SPaT
<b>Infographic</b>	None

Infographic

Other Image

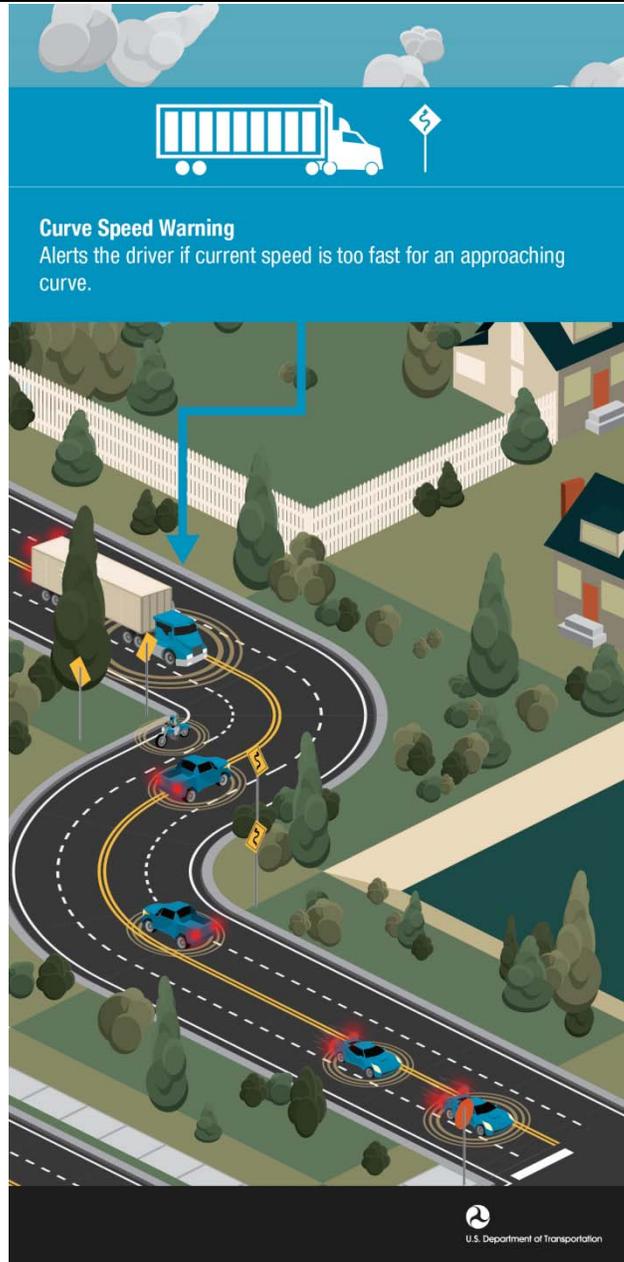

(Source: <http://www.gizmag.com/volvo-car-2-car-communication-consortium/24892/>)

**Table 2.4: V2I Safety ▶ Curve Speed Warning**

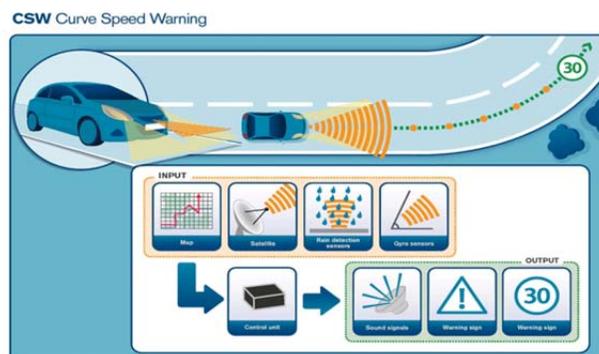

<b>Title</b>	Curve Speed Warning
<b>CVRIA Reference</b>	<a href="#">Curve Speed Warning</a>
<b>Description</b>	Curve Speed Warning (CSW) application is intended to help drivers approaching a curve to travel through it at a safe speed based on the current road and weather conditions. In particular, the application warns drivers if they are exceeding the safe speed threshold which may result in a loss of vehicle stability and control, leading to a roadway departure and/or rollover crash. This can be particularly important for trucks and other large vehicles ( <i>U.S. DOT 2012</i> ).
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	<b>ODOT 12.</b>
<b>Benefits/Impact</b>	<ul style="list-style-type: none"> <li>• Reductions in the number of roadway fatalities</li> <li>• Reductions in the number and severity of roadway injuries</li> <li>• Reductions in property damage associated with roadway incidents</li> <li>• Reductions in the number of near-miss intersection conflict and run-off-road (ROR) incident scenarios</li> </ul>
<b>Maturity</b>	Still within the technological development stages. The extension to a connected/cooperative environment has been demonstrated but not yet deployed.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, Driver-Infrastructure Interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure CSW Application (curve location i.e. Latitude/Longitude and divergent path or part of roadway, curve geometry i.e. curve radius, roadway super-elevation, and slope, road way material, posted speed limit, and advisory speed).
<b>Vehicle Component Requirements</b>	Vehicle CSW Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed: the Dedicated Short-Range Communication (DSRC) Roadside Unit (RSU) is deployed to a particular location and fixed to a permanent structure
<b>Roadside Interface to Local</b>	No: no connections are needed.
<b>Backhaul Communications</b>	None: no backhaul communications are needed.
<b>Backhaul Restrictions</b>	N/A: backhaul restrictions are not applicable since there are no backhaul

	communications needed for CSW.
<b>Mapping Support</b>	Optional-Road Network: CSW needs to be able to place the mobile unit within the context of a particular road. This class of map can support applications like Curve Speed Warning and be broadcasted to a vehicle at a remote location and used by the vehicle some time later when it reaches the curve.
<b>Siting Dependency</b>	Critical: consistency and reliability of roadside to mobile unit communications is critical to application effectiveness.
<b>Management of Collected Data</b>	No: no data management services are needed.
<b>Back Office Services/Applications</b>	No: no back office applications/services are needed.
<b>Latency</b>	Low: prompt information exchange is essential to the effectiveness of the application; response times on the order of one second or less are needed.
<b>Vehicle Data Connection</b>	Required: CSW requires data from the vehicle.
<b>Benefits vs. Deployment Level</b>	Benefits are realizable from day one: users can begin to see benefits from CSW as soon as it is deployed.
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None: no data are needed from the OBU
<b>Data Needs from Infrastructure</b>	App-specific: information specific to CSW beyond the other data groups.

Infographic

Other Image

**Table 2.5: V2I Safety ▶ Stop Sign Gap Assist**

<b>Title</b>	Stop Sign Gap Assist (SSGA)
<b>CVRIA Reference</b>	<a href="#">Stop Sign Gap Assist</a> <a href="#">Stop Sign Violation Warning</a>
<b>Description</b>	“The SSGA application is intended to improve safety at un-signalized intersections where only the minor road has posted stop signs” ( <i>U.S. DOT 2015b</i> ). To have this technology work there will need to be the integration of both vehicle based and infrastructure-based technologies. This can be accomplished by having both onboard and roadside signage warning systems integrated. The SSGA application collects all available sensor information (major road, minor road, and median sensors) data and computes the dynamic state of the intersection in order to issue appropriate warnings and alerts. The SSGA application is configured for both equipped and unequipped scenarios, and thus the vehicle components of the application can be optional ( <i>U.S. DOT 2012</i> )
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The application will help drivers on a minor road remain stopped at an intersection by providing a warning of unsafe gaps on the major road. In this way, the SSGA safety application will help drivers maneuver through cross traffic. This will reduce the number of conflicts and crashes that occur at intersections.
<b>Maturity</b>	Elements in the application have been developed and individual components are relatively mature, but this does not exist as a stand-alone package at this stage.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, Driver-Infrastructure Interface, Driver-Vehicle Interface, Vehicle Systems Interface.
<b>Infrastructure Requirements</b>	Infrastructure Communications Interface, and Vehicle Communications Interface, Infrastructure SSGA Application.
<b>Vehicle Component Requirements</b>	Vehicle SSGA Application, and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor.</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	None

<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Not Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	App-specific

**Infographic**

The infographic is divided into three main sections. The top section is an orange banner with a white silhouette of a pickup truck and a stop sign. Below this banner, the text reads: **Stop Sign Gap Assistance**  
Alerts the driver when it is unsafe to enter a STOP-sign controlled intersection. The middle section is a large illustration of a street intersection. A yellow car is at a stop sign, with red sensor waves extending from its front. An orange arrow points from the text above to these waves. Other vehicles, including a bus, a truck, and a car, are shown in various lanes. The bottom right corner features the U.S. Department of Transportation logo.

**Stop Sign Gap Assistance**  
Alerts the driver when it is unsafe to enter a STOP-sign controlled intersection.

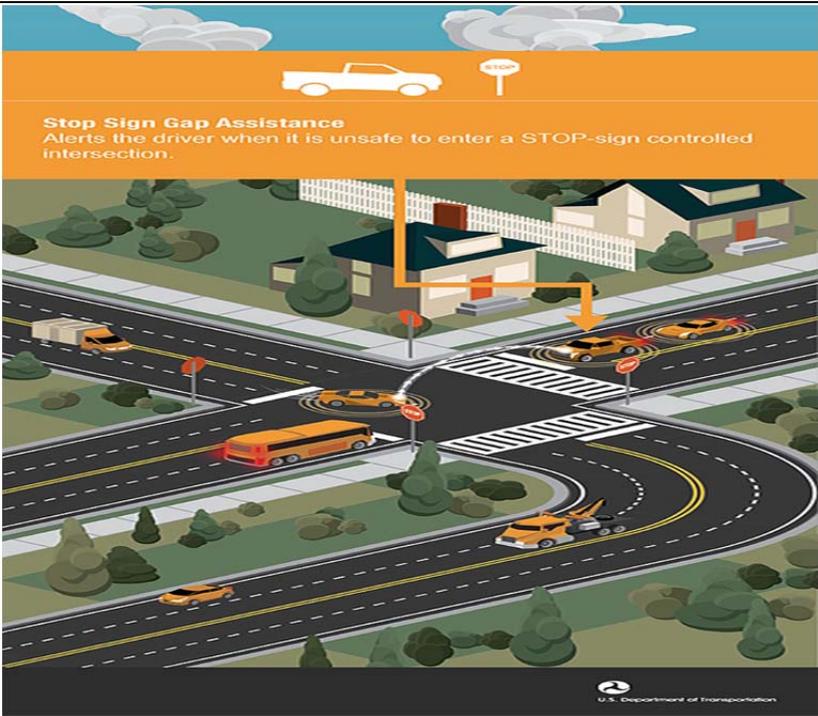

**Table 2.6: V2I Safety ▶ Spot Weather Impact Warning**

<b>Title</b>	Spot Weather Impact Warning
<b>CVRIA Reference</b>	<a href="#">Spot Weather Impact Warning</a>
<b>Description</b>	The SWIW application alerts drivers regarding unsafe conditions at specific points on the roadway as a result of weather (high winds, flood conditions, ice, or fog). Real time weather information is collected via Road Weather Information Systems (RWIS) or via vehicle based probe data. The information is processed to determine priority of the alert or warning to be delivered. Then this warning is communicated to the driver, other connected vehicles in the vicinity, and to on roadway signage ( <i>U.S. DOT 2015c</i> ).
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	<b>ODOT 13.</b>
<b>Benefits/Impact</b>	The application is designed to use standalone weather systems to warn drivers about inclement weather conditions that may impact travel conditions.
<b>Maturity</b>	Road weather warning systems are mature and are used in Oregon and around the U.S. The connected/cooperative version has been demonstrated but is not yet implemented.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, Driver-Infrastructure Interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure SWIW Application: Road-weather data (including raw, processed, and quality check data), Current DII Message, Duration and/or distance of applicability weather impact zone, Location of weather impact zone, Infrastructure application recommended advisory speed (Optional), Infrastructure application recommendation to divert to alternate route (Optional).
<b>Vehicle Component Requirements</b>	Vehicle SWIW Application and In-Vehicle Warning System ( <i>U.S. DOT 2012, Stephens et al. 2012</i> ).
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	Optional

<b>Siting Dependency</b>	Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	Medium
<b>Vehicle Data Connection</b>	Not required
<b>Benefits vs. Deployment Level</b>	Day one
<b>Other Dependency</b>	Privacy
<b>Data Needs from OBU</b>	BSM1
<b>Data Needs from Infrastructure</b>	Wireless Communication to Connected Vehicle

**Infographic**

**Table 2.7: V2I Safety ▶ Pedestrian in Signalized Crosswalk Warning**

<b>Title</b>	Pedestrian in Signalized Crosswalk Warning (Transit)
<b>CVRIA Reference</b>	<a href="#">Pedestrian in Signalized Crosswalk Warning</a>
<b>Description</b>	This technology provides connected vehicle information from the infrastructure that indicates the presence of pedestrians in a crosswalk at a signalized intersection. This infrastructure-based indication can either include the outputs of pedestrian sensors or an indication that the pedestrian has placed a call to a signals control cabinet. This application has been applied to public transit vehicles in test applications, but can be applicable to any vehicle ( <i>U.S. DOT 2015e</i> ).
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	This technology provides connectivity between and among vehicles, infrastructure, and wireless devices to enable crash warnings, enable safety, mobility, and environmental benefits, and provide continuous real-time connectivity to all system users.
<b>Maturity</b>	Flashing crosswalk systems have been deployed ( <i>Huang et al. 1999</i> ) but the connected/cooperative elements are still on the horizon.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	ITS Roadside Equipment
<b>Vehicle Component Requirements</b>	Vehicle OBE
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Non-Critical

<b>Data Needs from Infrastructure</b>	App-specific

Infographic

### Pedestrian in Signalized Crosswalk

Warns the bus driver when a pedestrian is crossing the street as the bus is making a right or left turn.

U.S. Department of Transportation

**Table 2.8: V2I Safety ▶ Railroad Crossing Violation Warning**

<b>Title</b>	AASHTO: Railroad Crossing Violation Warning
<b>CVRIA Reference</b>	<a href="#">Railroad Crossing Violation Warning</a>
<b>Description</b>	RSU in vicinity of intersection and connected to RR crossing guard controller sends out Signal Phase and Timing Messages (or RRX equivalent). Vehicle OBU receives SPAT/RRX info and determines if a warning is appropriate. Alerts and warn drivers if they are about to collide with a crossing/approaching train. Goal: to reduce, mitigate, or prevent additional accidents from occurring beyond the standard safety countermeasures, such as flashing lights, warning bells, and cross gates, that are typically installed.
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	<b>ODOT 14.</b>
<b>Benefits/Impact</b>	Safety – To prevent vehicle accidents, to discourage drivers from violating railroad crossing traffic controls
<b>Maturity</b>	RCVW is currently being researched and tested. Today, Rail Crossing Warning systems have been widely deployed and include flashing light signals, automatic gates, and warning bells. There are different types of train detection systems that are in use today, such as an AC-DC track circuit, audio frequency overlay track circuit, and motion-sensitive track circuits. However, these systems do not meet the requirement of the RCVW. (See requirements section below).
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	ITS Roadside Equipment
<b>Vehicle Component Requirements</b>	Vehicle OBE
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b> The railroad, transit agency, ODOT and local agencies are responsible for all infrastructure-related actions (repair, maintenance, communication network).
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive

<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Medium
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	SPaT

**Infographic**

The infographic is divided into three main sections. At the top, a dark blue horizontal bar contains white icons of a train and a car. Below this bar, a light blue section contains the title and a descriptive paragraph. The bottom section is a 3D isometric illustration of a road-rail intersection. A train is crossing the road from right to left. Two cars are on the road, one approaching the intersection from the left and another further back. Both cars have circular warning icons above them that say 'Approaching Train'. The train also has a similar warning icon. The scene includes trees, a building, and railroad tracks with crossing signs.

**Connected Vehicle Safety for Rail**  
Warns drivers if there is a train approaching and if there is a potential risk of collision, as well as provides drivers with information on the estimated amount of time until the train clears the intersection

U.S. Department of Transportation

**Table 2.9: V2I Safety ▶ Disabled/Oversize Vehicle Warning**

<b>Title</b>	AASHTO: Disabled/Oversize Vehicle Warning
<b>CVRIA Reference</b>	<a href="#">Oversize Vehicle Warning</a>
<b>Description</b>	RSU in vicinity of (i.e. on approach to) overhead restriction sends out overhead limit locations and directions. Vehicle OBU receives overhead limit info and determines if a warning is appropriate. Ideally, an alert would be given so that the oversize vehicle can be rerouted before a warning to stop is required.
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	<b>ODOT 15.</b>
<b>Benefits/Impact</b>	Uses external measurements taken by the roadside infrastructure, and transmitted to the vehicle, to support in-vehicle determination of whether an alert/warning is necessary
<b>Maturity</b>	In the general category of motorist warnings, many of the issues have been tested in field deployments, but this is not at the stage of actual implementation yet.
<b>Interface Requirements</b>	ITS Roadway Equipment, Maintenance and Construction Vehicle Platform, Weather Service
<b>Infrastructure Requirements</b>	Maintenance and Construction Management Center "Roadside Equipment" (RSE)
<b>Vehicle Component Requirements</b>	Maintenance and Construction Vehicle OBE, Dedicated Short Range Communications (DSRC)
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Portable or Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Medium
<b>Vehicle Data Connection</b>	Not Required

<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	GIDs/Maps
<b>Infographic</b>	None

## 2.2 VEHICLE TO VEHICLE (V2V) SAFETY APPLICATIONS

**Table 2.10: V2V Safety ▶ Emergency Electronic Brake Light**

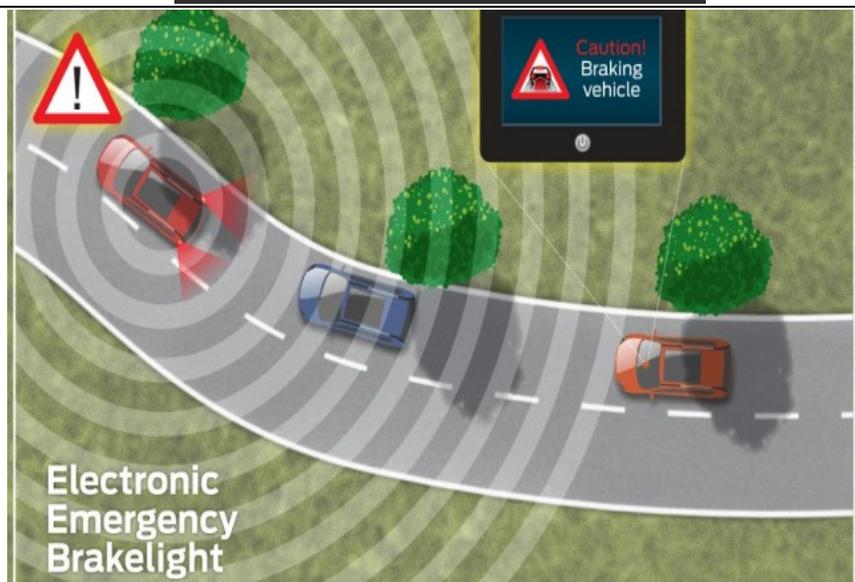

<b>Title</b>	Emergency Electronic Brake Light (EEBL)
<b>CVRIA Reference</b>	<a href="#">Emergency Electronic Brake Light</a>
<b>Description</b>	Broadcasts “hard braking” messages to surrounding vehicles. EEBL issues a warning to the driver when the lead vehicle is decelerating by a minimum of 0.4 g. This application addresses the "Lead Vehicle Decelerating" scenario and shares some overlap in functionality with the Forward Collision Warning (FCW) application ( <i>U.S. DOT 2015f</i> ).
<b>Category</b>	Vehicle to Vehicle Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Warns drivers of hard-braking/stopped vehicles despite obstacles and visibility constraints. Will decrease and could potentially eliminate rear-end collisions. Impacts: Safety 5, Efficiency 2, Comfort 4
<b>Maturity</b>	New fleets will be equipped with such devices in the near future.
<b>Interface Requirements</b>	V2V Safety applications need to broadcast the performance of their vehicle in the transportation environment.
<b>Infrastructure Requirements</b>	Map Update System
<b>Vehicle Component Requirements</b>	Vehicle Platform Vehicle On-Board Equipment (OBE)
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	None

<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	Not critical
<b>Management of Collected Data</b>	Algorithm determining whether a braking event requires a driver warning
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low: DSRC=10Hz
<b>Vehicle Data Connection</b>	Requires DSRC
<b>Benefits vs. Deployment Level</b>	As more vehicles become EEBL-equipped, the number of rear-end collisions is expected to decrease.
<b>Other Dependency</b>	For the EEBL system to work properly, all vehicles need to be equipped.
<b>Data Needs from OBU</b>	Position, speed, brake monitoring
<b>Data Needs from Infrastructure</b>	None

**Infographic**

**Other Image**

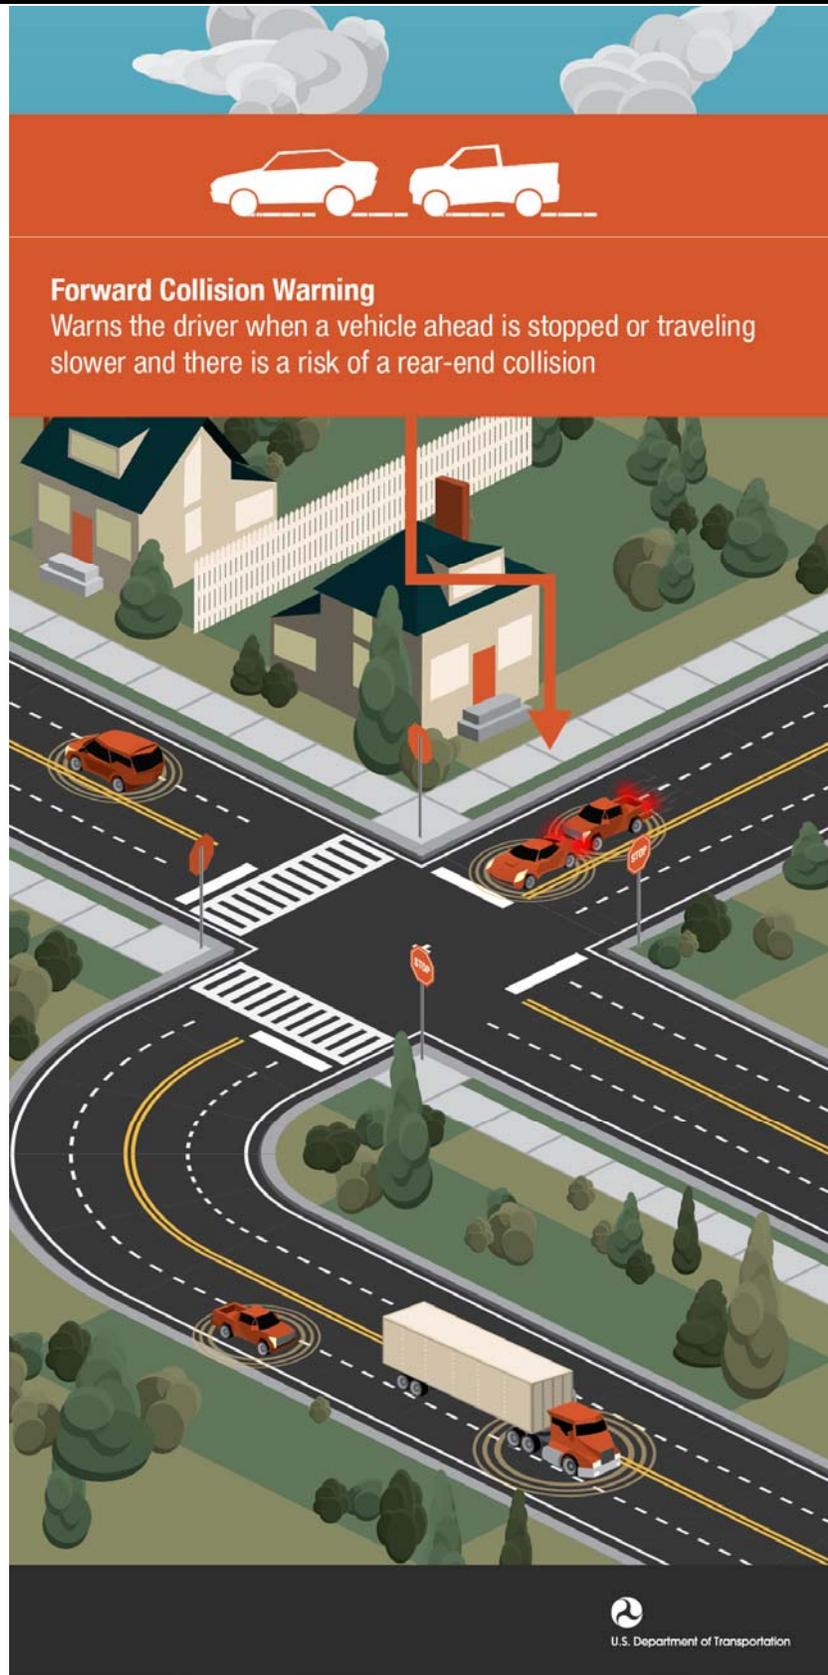

**Table 2.11: V2V Safety ▶ Forward Collision Warning**

<b>Title</b>	Forward Collision Warning
<b>CVRIA Reference</b>	<a href="#">Forward Collision Warning</a>
<b>Description</b>	FCW is an application that currently has well-developed research-level performance and test metrics. Current FCW applications based on visual and radar detection systems can be hindered by certain lighting and weather conditions, and are limited with respect to distance. FCW applications using V2V technology can function in environments and under conditions beyond the current visual and radar detection systems (e.g., sunrise, sunset, rain, snow, >300m range), allowing for a more robust warning system ( <i>Harding et al. 2014</i> ).
<b>Category</b>	Vehicle to Vehicle Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The benefit of this technology can definitely outweigh cost of installation. It does not change levels of efficiency or comfort but it will undoubtedly increase levels of safety for everyone in the vehicle. : The main type of crash prevented by this technology is a rear end warning situation.
<b>Maturity</b>	Not the most mature and perfected technology, but implementations of such or similar have been available on the market.
<b>Interface Requirements</b>	None
<b>Infrastructure Requirements</b>	Inexpensive installation of hardware, e.g. sonars and radars and simple software installation
<b>Vehicle Component Requirements</b>	None
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor.</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	None
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	None
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	None
<b>Management of Collected Data</b>	No

<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Not required
<b>Benefits vs. Deployment Level</b>	Benefits will increase with greater penetration rates.
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	None

**Infographic**

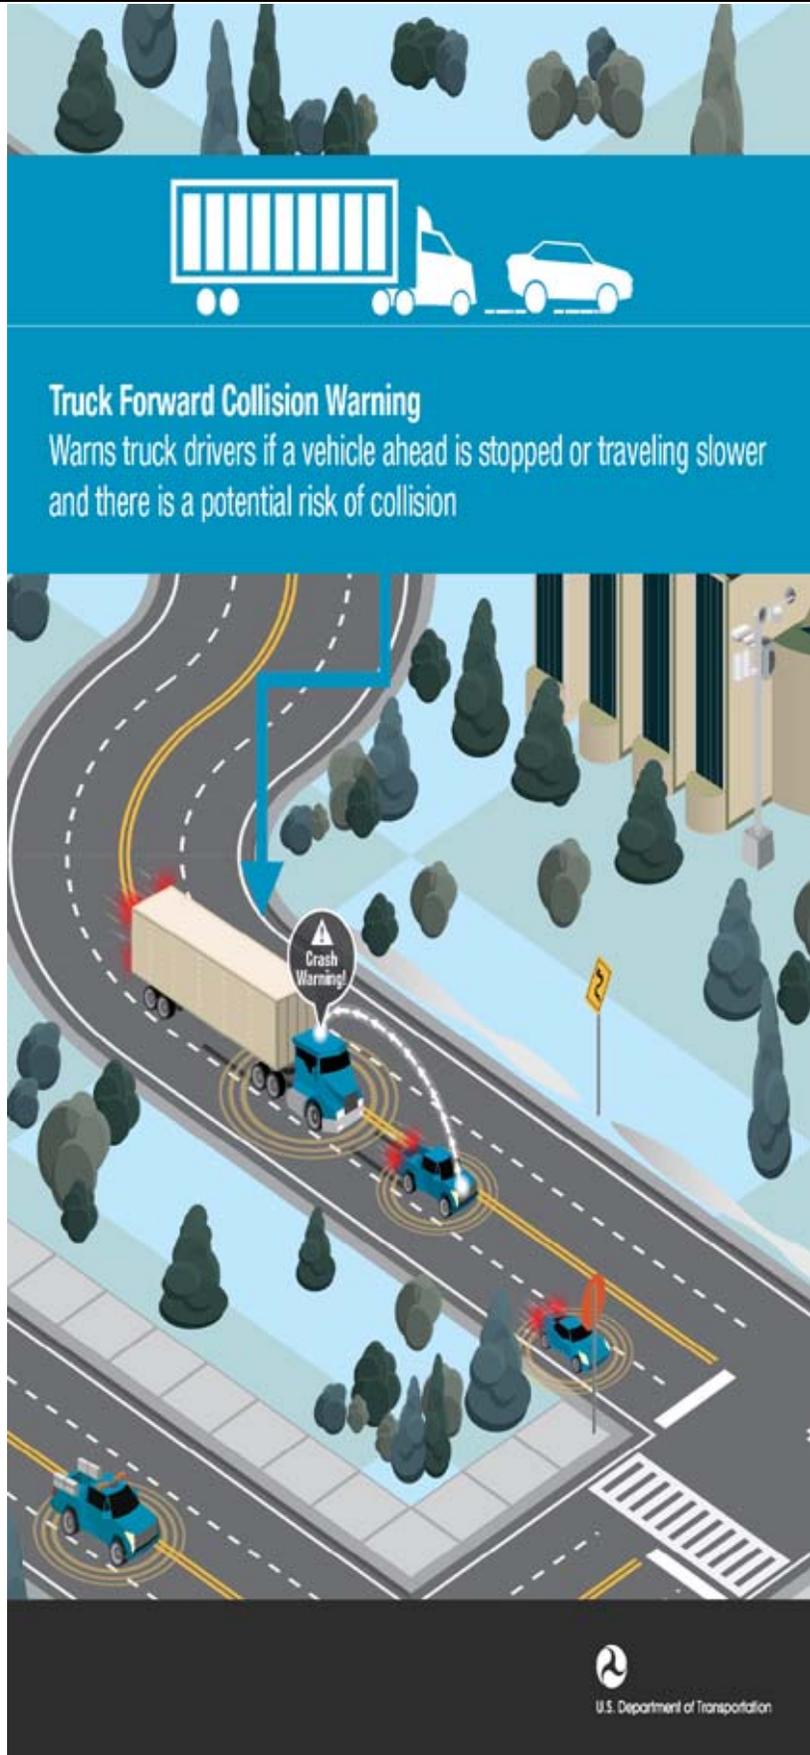

The infographic is divided into three main sections. At the top, a blue sky with white clouds is above an orange horizontal band. Inside this band, two white car silhouettes are shown on a road. Below the band, the text 'Forward Collision Warning' is written in white, followed by a description: 'Warns the driver when a vehicle ahead is stopped or traveling slower and there is a risk of a rear-end collision'. The middle section is an isometric illustration of a street scene. A red car is stopped at a stop sign on the right side of the road. Another red car is approaching from behind it. A white truck is driving away from the viewer on a curved road in the foreground. A red car is also driving away from the viewer on the left side of the road. A red arrow points from the text above down to the red car at the stop sign. The bottom section is a dark grey band containing the U.S. Department of Transportation logo and name.

**Forward Collision Warning**  
Warns the driver when a vehicle ahead is stopped or traveling slower and there is a risk of a rear-end collision

U.S. Department of Transportation

**Infographic**

The infographic is divided into three main sections. The top section features a blue background with white icons of a semi-truck and a car. Below this, a blue text box contains the title and description. The middle section is a 3D isometric illustration of a road with a truck and several cars, showing sensor waves and a warning icon. The bottom section is a black footer with the U.S. Department of Transportation logo and name.

**Truck Forward Collision Warning**  
Warns truck drivers if a vehicle ahead is stopped or traveling slower and there is a potential risk of collision

Crash Warning!

U.S. Department of Transportation

**Table 2.12: V2V Safety ▸ Intersection Movement Assist**

<b>Title</b>	Intersection Movement Assist (IMA)
<b>CVRIA Reference</b>	<a href="#">Intersection Movement Assist</a>
<b>Description</b>	The IMA application warns the driver when it is not safe to enter an intersection due to high collision probability with other vehicles. IMA has the potential for significant safety benefits and cost savings (26 percent of all crashes occurring in the crash population and 23 percent of comprehensive costs)
<b>Category</b>	Vehicle to Vehicle Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The main type of crash type addressed by this application is an intersection crossing crash.
<b>Maturity</b>	As currently implemented in research/demonstration situations, the application does not issue a warning under certain circumstances, such as when a vehicle entering an intersection is moving at low speeds. A wider range of testing, especially at higher speeds (representing real-world crash speeds), requires the development of safer protocols that reduce or eliminate the consequences of a crash during testing, such as using remote guided targets as opposed to real vehicles. Various roadway geometries (e.g., cloverleaf, on-ramp, exit ramp) that do not represent a crash-imminent situation can be incorrectly classified as conflict situations by the system.
<b>Interface Requirements</b>	V2V Safety applications need to broadcast the performance of their vehicle in the transportation environment.
<b>Infrastructure Requirements</b>	Map Update System
<b>Vehicle Component Requirements</b>	Vehicle Platform Vehicle On-Board Equipment (OBE)
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	None
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	None
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	None
<b>Management of</b>	No

<b>Collected Data</b>	
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Not required
<b>Benefits vs. Deployment Level</b>	Benefits will increase with greater penetration rates.
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	None

**Infographic**

**Other Image**

(Source: <http://blog.beachford.com/tag/ford-focus/>)

**Table 2.13: V2V Safety ▶ Left Turn Assist**

<b>Title</b>	Left Turn Assist (LTA)
<b>CVRIA Reference</b>	<a href="#">Intersection Movement Assist</a>
<b>Description</b>	The LTA application will provide information to drivers performing unprotected left turns to judge the gaps in oncoming traffic as well as inform them when other users, such as pedestrians or bicyclists, pose hazards to completing a safe left turn ( <i>Harding et al. 2014</i> ).
<b>Category</b>	Vehicle to Vehicle Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	LTA is an application that addresses left turn across path/opposite direction crashes that constitutes approximately 7.4 percent of all light vehicle crashes. Recent research suggests that while executing a turn, drivers activate the turn signal about 75 percent of the time. Current performance and test metrics for LTA require turn signal activation to activate the safety application.
<b>Maturity</b>	NHTSA has estimated that LTA would prevent 36 to 62 percent of left turn crashes. LTA is considered to have no impact on mitigating the severity of the left turn crashes that cannot be avoided
<b>Interface Requirements</b>	V2V Safety applications need to broadcast the performance of their vehicle in the transportation environment.
<b>Infrastructure Requirements</b>	Map Update System
<b>Vehicle Component Requirements</b>	Vehicle Platform Vehicle On-Board Equipment (OBE)
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor.</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	None
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	None
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	None
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low

<b>Vehicle Data Connection</b>	Not required
<b>Benefits vs. Deployment Level</b>	Benefits will increase with greater penetration rates.
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	None

Infographic

The infographic is divided into three horizontal sections. The top section features a white icon of a crossed-out eye and a white silhouette of a truck on an orange background. The middle section is a solid orange banner with white text. The bottom section is a 3D isometric illustration of a city intersection. A large orange truck is in the process of making a left turn across the path of a smaller orange car. A white speech bubble with a warning triangle icon and the text "Crash Warning!" points to the intersection point. A large orange arrow points from the truck's path towards the car. The scene includes traffic lights, a stop sign, and various road markings.

**Left Turn Across Path**  
Notifies a driver who is attempting to make a left turn through oncoming traffic that it is not safe to proceed

U.S. Department of Transportation

**Table 2.14: V2V Safety ▶ Blind Spot/Lane Change Warning**

<b>Title</b>	Blind Spot/Lane Change Warning (BSW/LCW)
<b>CVRIA Reference</b>	<a href="#">Blind Spot Warning + Lane Change Warning</a>
<b>Description</b>	BSW/LCW is an application that provides an advisory alert when another vehicle occupies the adjacent lane in the driver’s blind spot. This advisory elevates to a warning when the driver signals an intent to change lanes through the activation of the turn signal. LCW is activated when vehicles are traveling at varying speeds between the host vehicle and remote vehicle to align more closely with the safety need. The application also provides the driver with advisory information that another vehicle in an adjacent lane is positioned in the original vehicle’s “blind spot” zone when a lane change is not being attempted.
<b>Category</b>	Vehicle to Vehicle Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Drivers infrequently use turn signals in lane change near-crash events (<26 percent turn signal use, based upon an unpublished analysis of IVBSS data). This application has the potential to address at least 19 percent of the crashes in the lane change crash group.
<b>Maturity</b>	Different automotive manufacturers have been proposing implementation of this application but NHTSA recommends that the technology is recommended that more indicators of driver intent and vehicle movement be identified in addition to the turn signal should be tested.
<b>Interface Requirements</b>	V2V Safety applications need to broadcast the performance of their vehicle in the transportation environment.
<b>Infrastructure Requirements</b>	Map Update System
<b>Vehicle Component Requirements</b>	Vehicle Platform Vehicle On-Board Equipment (OBE)
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	Not Critical
<b>Management of</b>	No

<b>Collected Data</b>	
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Not Required
<b>Benefits vs. Deployment Level</b>	Benefits will increase with greater penetration
<b>Other Dependency</b>	N/A
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	None

**Infographic**

**Other Image**

(Source : <http://articles.sae.org/4545/>)

**Table 2.15: V2V Safety ▶ Do Not Pass Warning**

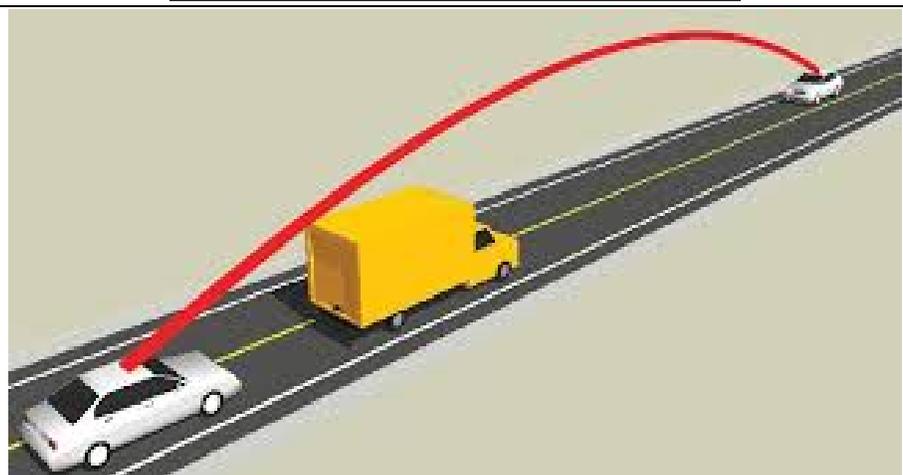

<b>Title</b>	Do Not Pass Warning (DNPW)
<b>CVRIA Reference</b>	<a href="#">Do Not Pass Warning</a>
<b>Description</b>	The Do Not Pass Warning (DNPW) application warns the driver during a passing maneuver when a vehicle ahead and in the same lane as the overtaking vehicle cannot be safely passed.
<b>Category</b>	Vehicle to Vehicle Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The safety application is in reducing the head on crash scenario. Although safety data indicate that the vast majority (approximately 90 percent) of opposite direction crashes occur when a driver unintentionally drifts into a lane with oncoming traffic (as opposed to drivers conducting a passing maneuver) ( <i>Harding et al. 2014</i> ) the collision is nonetheless dangerous.
<b>Maturity</b>	The DNPW application currently has a less robust set of performance and test metrics compared to other V2V safety applications studied. DNPW addresses only a subset of opposite direction crashes because it addresses situations where the driver is intentionally conducting a passing maneuver using the lane of opposing traffic. The current test metrics that are available also do not test the DNPW application's ability to function under a wide variety of roadway conditions.
<b>Interface Requirements</b>	V2V Safety applications need to broadcast the performance of their vehicle in the transportation environment.
<b>Infrastructure Requirements</b>	Map Update System
<b>Vehicle Component Requirements</b>	Vehicle Platform Vehicle On-Board Equipment (OBE), DSRC in the overtaking vehicle and the vehicle travelling in the opposite direction for communication.
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	None
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	None
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	None
<b>Management of Collected Data</b>	No

<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Not required
<b>Benefits vs. Deployment Level</b>	Benefits will increase with greater penetration rates.

**Table 2.16: V2V Safety ▶ Vehicle Turning Right in Front of Bus Warning**

<b>Title</b>	Vehicle Turning Right in Front of Bus Warning (TRANSIT)
<b>CVRIA Reference</b>	<a href="#">Vehicle Turning Right in Front of a Transit Vehicle</a>
<b>Description</b>	The TRANSIT application warns a bus operator when another vehicle is passing on the left and turning in front of the bus, either to re-enter the right-hand lane or to complete a right turn in front of the bus, as a bus is departing a bus stop. This situation often occurs when a bus stop is located on the near side of an intersection and the bus is stopped in the right lane at the bus stop loading and unloading passengers. Another vehicle traveling behind the bus (and planning to turn right at the intersection) is unsure of the bus’s dwell time. As a result, the other vehicle passes the bus on its left and attempts to make a right turn at the intersection. If the bus is pulling away from the bus stop at the same time the other vehicle is turning, there is a potential for a collision.
<b>Category</b>	Vehicle to Vehicle Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	This application will thwart potential right angle collision between transit vehicles and right turning vehicles especially when the transit stop is at a proximity to an intersection.
<b>Maturity</b>	The technology is mature enough and several implementation architecture scenarios have been put forward.
<b>Interface Requirements</b>	V2V Safety applications need to broadcast the performance of their vehicle in the transportation environment.
<b>Infrastructure Requirements</b>	Map Update System
<b>Vehicle Component Requirements</b>	Vehicle Platform Vehicle On-Board Equipment (OBE)
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	None
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	None
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	None
<b>Management of Collected Data</b>	No

<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Not required
<b>Benefits vs. Deployment Level</b>	Benefits will increase with greater penetration rates.
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	None

**Infographic**

The infographic is divided into three main sections. At the top, a white silhouette of a bus is shown on a blue background with motion lines behind it. Below this, a blue text box contains the title and description. The bottom section is a large illustration of a city street intersection. A blue bus is moving away from a bus stop on the right side of the road. Concentric yellow circles representing sensor waves emanate from the bus, detecting a blue car that is turning right in front of it. A speech bubble with a warning icon and the text "Crash Warning!" points to the car. Other elements in the scene include traffic lights, a bus stop shelter, pedestrians, and another car in the distance.

**Vehicle Turning Right in Front of Bus**  
Warns a bus driver when a vehicle attempts to turn right in front of the bus as the bus pulls away from a bus stop.

Crash Warning!

U.S. Department of Transportation

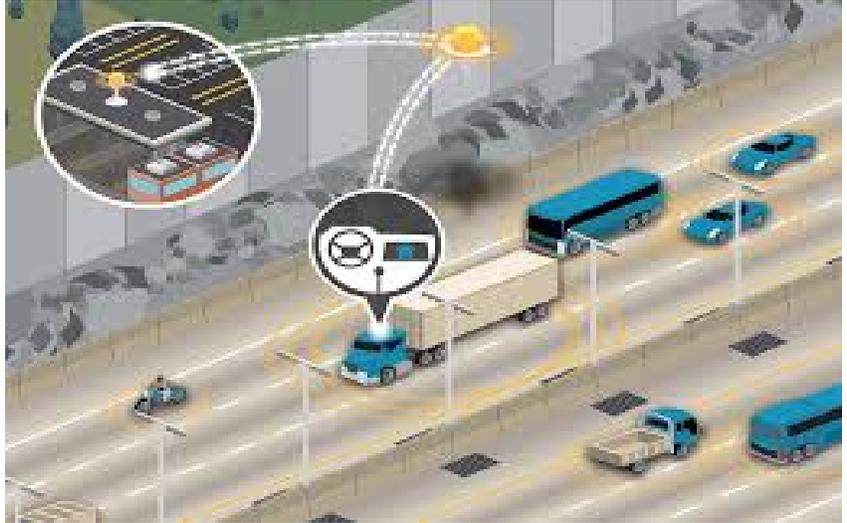

## 2.3 AGENCY DATA APPLICATIONS

**Table 2.17: Agency Data ▶ Probe-Based Pavement Maintenance**

<b>Title</b>	Probe-Based Pavement Maintenance (PDPM)
<b>CVRIA Reference</b>	--
<b>Description</b>	<ul style="list-style-type: none"> <li>• PDPM Users: include the organizations, agencies, and individuals that are necessary for installing, maintaining, operating, and interacting with a functioning PDPM system.</li> <li>• Automobile original equipment manufacturer (OEMs): responsible for original equipment, and for vehicle-related equipment and software actions necessary to establish and maintain the in-vehicle PDPM system. Automobile OEMs may incorporate their role into existing organizational structures. There are additional roles that they will assume to help ensure that PDPM remains in operation over the long-term.</li> <li>• State and Local DOTs: responsible for applying the reported information to pavement management programs. State and local DOTs have the primary role as end users of pavement quality data. They may process raw data themselves if collected via DSRC-based, or they may purchase data from Data Providers. This includes maintain the equipment for reliable operation (when used), installation of backend connectivity from roadside equipment to Data Centers, and participation in standards development activities.</li> <li>• FHWA responsible for developing high level guidance to state and local agencies in the deployment and operation of PDPM systems (<i>Dawkins and Powell 2011</i>).</li> </ul>
<b>Category</b>	Agency Data Applications
<b>ODOT Application Number</b>	<b>ODOT 19.</b>
<b>Benefits/Impact</b>	There are also potential positive long-term secondary and tertiary benefits which accompany the implementation of such a probe-vehicle system. One such benefit is serving as a proof of concept for secondary applications of the connected vehicle program, adding value to the ITS program and maximizing return on USDOT’s research funds and efforts. A well-planned and executed roughness data collection system can also serve as a proof-of-concept for other types of data-gathering systems; for example, an attempt to gather data on the effect of weather on vehicle dynamics or driver behavior.
<b>Maturity</b>	The application is mature and implementation ready.
<b>Interface Requirements</b>	Probe vehicles, accelerometers, data server
<b>Infrastructure</b>	Infrastructure data interface

<b>Requirements</b>	
<b>Vehicle Component Requirements</b>	Vehicle on-board equipment
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Portable or Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive

**Table 2.19: Agency Data ▶ Probe-Enabled Traffic Monitoring**

<b>Title</b>	Probe-Enabled Traffic Monitoring
<b>CVRIA Reference</b>	<a href="#">Vehicle Data for Traffic Operations</a>
<b>Description</b>	Real time traffic data supplied by connected vehicles. This application is a network traffic monitoring technology has been designed to be embedded within a switch or router. It provides the ability to continuously monitor application level traffic flows at wire speed on all ports simultaneously.
<b>Category</b>	Agency Data Applications
<b>ODOT Application Number</b>	<b>ODOT 20.</b>
<b>Benefits/Impact</b>	Agencies can save substantial resources devoted to real time data collection for traffic management.
<b>Maturity</b>	There are multiple companies that have constructed and provide probes that are in use today and it is ready to be implemented.
<b>Interface Requirements</b>	None
<b>Infrastructure Requirements</b>	Infrastructure data interface
<b>Vehicle Component Requirements</b>	Vehicle application and interface
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Portable or Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes

**Table 2.20: Agency Data ▶ Vehicle Classification-Based Traffic Studies**

<b>Title</b>	Vehicle Classification-Based Traffic Studies
<b>CVRIA Reference</b>	--
<b>Description</b>	Ability to associate vehicle type with vehicle behaviors.
<b>Category</b>	Agency Data Applications
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Counting vehicles over a period of time on a busy intersection will help the concerned authority to efficiently control the duration of traffic signal on road thus reducing the level of traffic congestion during rush hours. It helps in minimizing the possibilities of fraudulent activities in toll collection. It is necessary to provide better traffic surveillance to reduce crashes.
<b>Maturity</b>	This has only been proven conceptually by academia. There is no technology, device, or program that has been created yet.
<b>Interface Requirements</b>	None
<b>Infrastructure Requirements</b>	Infrastructure data interface
<b>Vehicle Component Requirements</b>	Vehicle application and interface
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b>
<b>Physical RSE Installation</b>	Portable or Fixed

**Table 2.21: Agency Data ▶ CV-Enabled Performance Measures**

<b>Title</b>	AASHTO: CV-Enabled Performance Measures
<b>CVRIA Reference</b>	<a href="#">Performance Monitoring and Planning</a>
<b>Description</b>	<p>Since MAP-21, USDOT has been establishing performance measures for various components of the transportation system. These rules require state DOTs, MPOs and other stakeholders to implement systems and new processes, and to regularly report results as a requirement for eligibility to certain Federal-aid funding. Connected vehicle technology deployments can facilitate operational improvements in both gathering operations data and providing data back to maintenance personnel. Data gathering is improved by using vehicles as probes across an agency’s region of operations—not just at fixed observing stations. Probe vehicles can gather data consistently across the entire road network at finer resolutions at any time the vehicles are in use. Operations and maintenance are improved by providing dynamic real-time information and plans (based on combining the probe data with other sources) to maintenance personnel. Connected vehicle technologies similarly have the potential to generate data that can support the gathering, calculation, and reporting of performance measures under MAP-21 and future USDOT rules. The net of these opportunities is that agency internal operations and maintenance costs could be reduced through connected vehicle capabilities.</p>
<b>Category</b>	Agency Data Applications
<b>ODOT Application Number</b>	<b>ODOT 21.</b>
<b>Benefits/Impact</b>	<p>More accurate data provided in a more timely fashion to agency staff would enable them to make smarter decisions about their operations, and to satisfy Federal performance management reporting requirements. Material costs of road treatment, for example, could be reduced if road conditions are more accurately known when routing and treatment plans are being set. Better information and planning ultimately also leads to safer conditions for both agency personnel and for the traveling public.</p>
<b>Maturity</b>	<p>CV deployments have generated probe data, which is similar to other probe-based data collection systems. While there is no operational system taking advantage of connected vehicles for performance measures yet, the technology is ripe for deployment.</p>
<b>Interface Requirements</b>	None
<b>Infrastructure Requirements</b>	Infrastructure data interface
<b>Vehicle Component Requirements</b>	Vehicle application and interface
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>

<b>Physical RSE Installation</b>	Portable or Fixed
<b>Roadside Interface to Local</b>	No

## 2.4 ENVIRONMENT APPLICATION – APPLICATIONS FOR THE ENVIRONMENT: REAL-TIME INFORMATION SYNTHESIS (AERIS)

**Table 2.25: Environment ▶ Eco-Approach and Departure at Signalized Intersections**

<b>Title</b>	Eco-Approach and Departure at Signalized Intersections
<b>CVRIA Reference</b>	<a href="#">Eco-Approach and Departure at Signalized Intersections</a>
<b>Description</b>	Wirelessly transmitted data from Roadside equipment (RSE) enable connected vehicles to adopt efficient deceleration approaches to intersections. This vehicle-based technology uses GIS data and signal phase and timing (SPaT) data using V2I networks. V2V data would also be collected to enable lane-changing vehicle automation.
<b>Category</b>	AERIS
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	5 to 10% fuel consumption reduction for uncoordinated corridors. 13% fuel consumption reduction for coordinated corridors, of which 8% is due to signal coordination and 5% is due to the application
<b>Maturity</b>	Well researched and considered in the AERIS operational scenario.
<b>Interface</b>	Archive the data collected for comparison to past and current operations

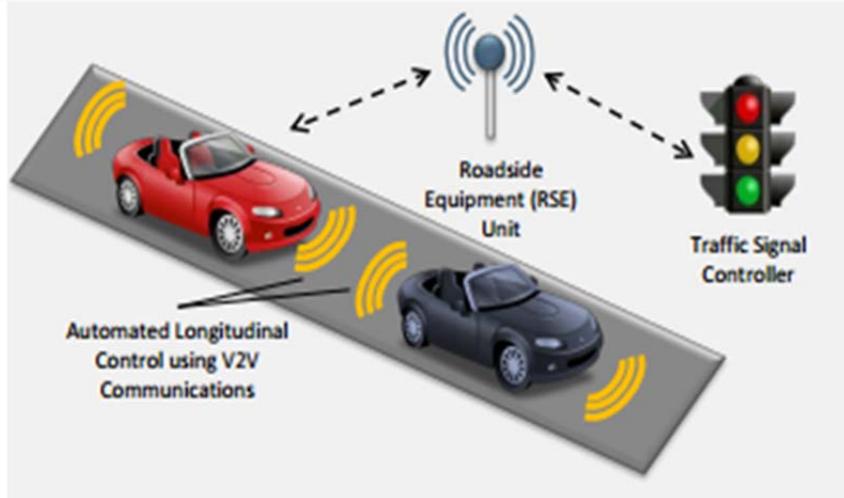

<b>Requirements</b>	
<b>Infrastructure Requirements</b>	Coordination of signals along corridor Disseminate data that improves the traffic signal system to end users
<b>Vehicle Component Requirements</b>	Connected vehicles capable of V2I and V2V communication Roadside equipment for I2V communication
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Localized Geometric

<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1+2
<b>Data Needs from Infrastructure</b>	SPaT+GIDs

**Infographic**

**Eco-Approach and Departure at Signalized Intersections**  
Traffic signals broadcast data about their current signal phase and timing (SPaT). Vehicle applications use these data to determine speed advice that can be presented to drivers allowing them to adapt their vehicle's speed to pass the next traffic signal on green or to decrease to a stop in the most eco-friendly manner. More advanced applications leverage cooperative adaptive cruise control (CACC) capabilities. Start-stop technology may be used to turn the vehicle's engine off while the vehicle is stopped at a red light.

**Table 2.35: Environment ▶ Low Emissions Zone Management**

<b>Title</b>	Low Emissions Zone Management
<b>CVRIA Reference</b>	<a href="#">Low Emissions Zone Management</a>
<b>Description</b>	The Low Emissions Zone Management application supports the operation of a low emissions zone that is responsive to real-time traffic and environmental conditions. Low emissions zones are geographic areas that seek to restrict or deter access by specific categories of high-polluting vehicles into the area to improve the air quality within the geographic area. The application uses data collected from vehicles using connected vehicle technologies and from roadside equipment as input to the system. The Low Emissions Zone Management application supports the geofencing of a cordon that may be scalable and moveable (e.g., created for a day, removable, flexible in its boundaries) and would be less dependent on conventional ITS infrastructure. The application would establish parameters including the types of vehicles permitted to enter the zone, exemptions for transit vehicles, emissions criteria for entering the zone, fees or incentives for vehicles based on emissions data collected from the vehicle, and geographic boundaries for the low emissions zone. The application would also include electronic toll collection functions that support payments of fees or collection of incentives for registered vehicles using connected vehicle technologies. Finally, this application provides information about the low emissions zone to traveler information centers, including information about criteria for entering the zone, expected fees and incentives, current and predicted traffic conditions, and geographic boundaries of the zone.
<b>Category</b>	AERIS
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Preliminary modeling shows a 3% to 5% emission savings with partial vehicle fleet penetration and improved transit service.
<b>Maturity</b>	Well researched and considered in the AERIS operational scenario
<b>Interface Requirements</b>	Back office interface, infrastructure data interface, roadside interface, weather service.
<b>Infrastructure Requirements</b>	Roadside equipment (RSE), management centers (traffic, weather and emission).
<b>Vehicle Component Requirements</b>	Vehicle OBE, dedicated short range communications (DSRC)
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b>

**Table 2.36: Environment ▶ AFV Charging/Fueling Information**

<b>Title</b>	AFV Charging/Fueling Information
<b>CVRIA Reference</b>	<a href="#">Electric Charging Stations Management</a>
<b>Description</b>	The Electric Charging Station Management application provides an exchange of information between vehicle and charging station to manage the charging operation. The agency or company operating the charging station can use vehicle information such as the capability of the vehicle (e.g. operational status of the electrical system, how many amps can the vehicle handle, and % charge complete) to determine that the charge is being properly applied and determine an estimated time to complete charging.
<b>Category</b>	AERIS
<b>ODOT Application Number</b>	<b>ODOT 6.</b>
<b>Benefits/Impact</b>	By switching to alternative fuels benefits related to emission and fuel efficiency are expected.
<b>Maturity</b>	The technology for this application is already in use.
<b>Interface Requirements</b>	Back office interface, infrastructure data interface, roadside interface, weather service.
<b>Infrastructure Requirements</b>	Roadside equipment (RSE)
<b>Vehicle Component Requirements</b>	Vehicle OBE, dedicated short range communications (DSRC)
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>

**Table 2.39: Environment ▶ Eco-Integrated Corridor Management Decision Support System**

<b>Title</b>	Eco-Integrated Corridor Management Decision Support System
<b>CVRIA Reference</b>	<a href="#">Eco-Integrated Corridor Management Decision Support System</a>
<b>Description</b>	Operating system which combines eco-ramp metering, eco-speed limits, eco-signal timing with historical, real and predicted traffic and environmental data on the corridor in order to improve environmental impact.
<b>Category</b>	AERIS
<b>ODOT Application Number</b>	<b>ODOT 7.</b>
<b>Benefits/Impact</b>	Fuel saving and emission reduction are expected due to optimal routing.
<b>Maturity</b>	Well researched and considered in the AERIS operational scenario
<b>Interface Requirements</b>	Back office interface, infrastructure data interface, personal information device, roadside interface.
<b>Infrastructure Requirements</b>	Roadside equipment (RSE), management centers (traffic, transit, maintenance, construction, emergency, weather, and emission)
<b>Vehicle Component Requirements</b>	Vehicle OBE, dedicated short range communications (DSRC)
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT.</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Limited Domains
<b>Mapping Support</b>	Lane Level
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Require Threshold Deployment Level
<b>Other Dependency</b>	Policy

<b>Data Needs from OBU</b>	BSM1+2
<b>Data Needs from Infrastructure</b>	App-specific

Infographic

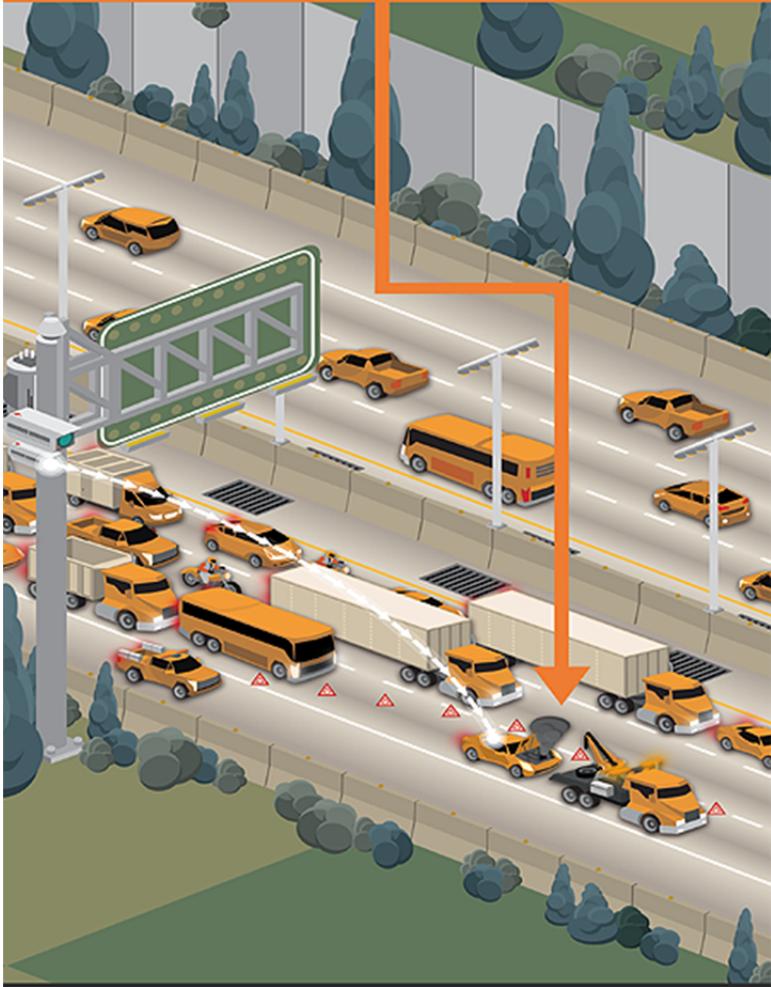

The diagram at the top shows a central 'Traffic Management Center' (TMC) icon connected to six other icons: 'Traffic Monitoring' (camera), 'Public Transit' (bus), 'Emergency Services' (ambulance), 'Distributed Traffic Models' (server rack), 'Traffic Signals' (traffic light), and 'Maintenance' (wrench and screwdriver).

**1**

**Integrated Corridor Management (ICM)**  
Agencies in ICM areas work cooperatively to share data and coordinate transportation operations.

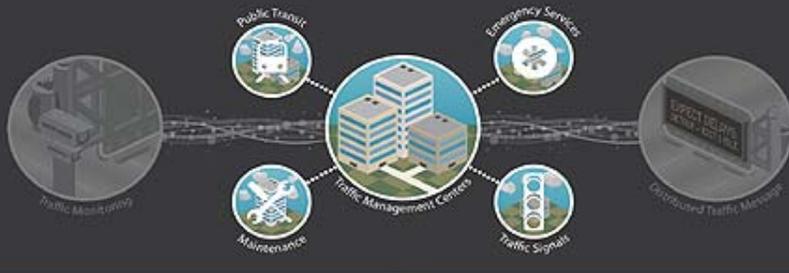

In an ICM corridor, a highway camera monitors traffic conditions and detects congestion due to a disabled vehicle.

The illustration shows a multi-lane highway with various vehicles including cars, buses, and trucks. A large white semi-truck is stopped in the middle of the road, with a yellow crane truck and other emergency vehicles nearby. A red triangle warning sign is placed in front of the disabled truck. A camera on a tall pole is positioned above the highway, with a beam of light directed at the disabled vehicle. An orange arrow points from the text above down to the disabled vehicle.

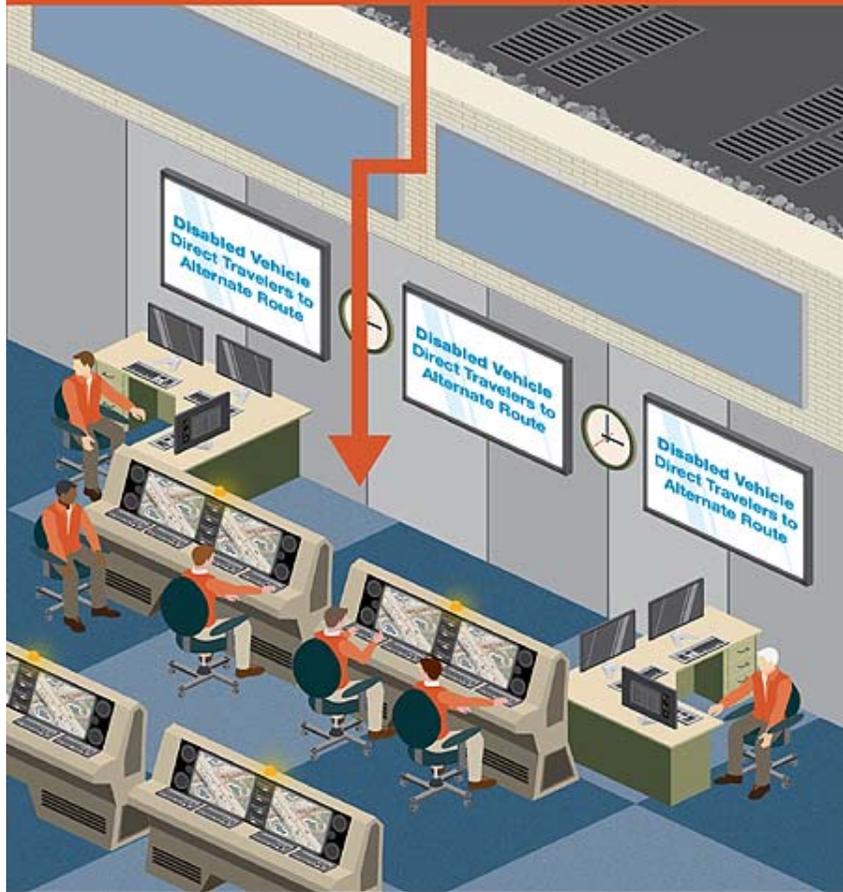

U.S. Department of Transportation

2

### Integrated Corridor Management (ICM)

Traffic management centers throughout the corridor receive and exchange data about the disabled vehicle and resulting congestion and delays, and process this information into a coordinated message for travelers. Traffic agencies may also change signal timing to accommodate traffic shifting onto nearby roadways.

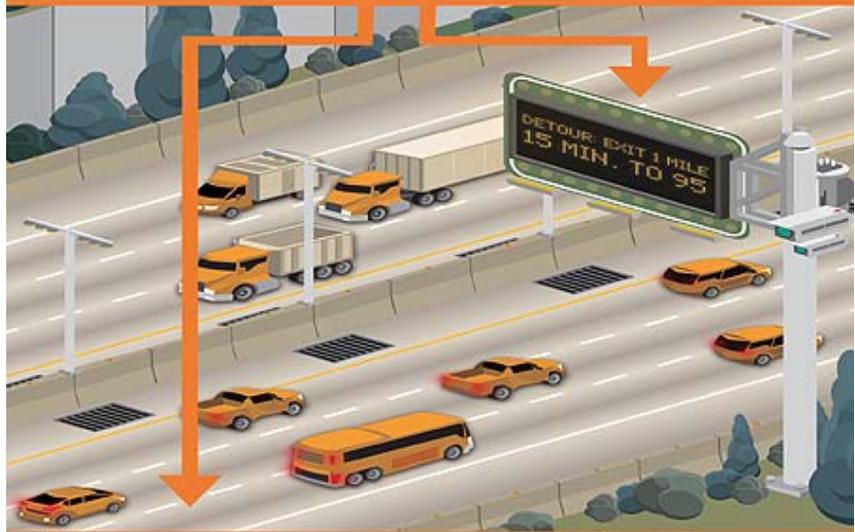

### ③

#### **Integrated Corridor Management (ICM)**

Travelers receive the message about congestion ahead and alternate travel routes via a dynamic message sign. The message could also be sent through highway radio, 511, and/or an in-vehicle communication device.

Travelers could also access the information via their smart phone or tablet, including alternate travel options such as parallel arterials, nearby transit facility locations, real-time schedule information, and parking availability.

By managing individual transportation assets as one integrated system, ICM improves travel time reliability, manages congestion, and empowers travelers with better information and more choices.

## 2.5 ROAD WEATHER APPLICATIONS

**Table 2.41: Road Weather ▶ Motorist Advisories & Warnings**

<b>Title</b>	Motorist Advisories & Warnings (MAW)
<b>CVRIA Reference</b>	<a href="#">Road Weather Motorist Alert and Warning</a>
<b>Description</b>	Provides advance warnings to drivers of adverse weather conditions, incidents, or slippery roads on specific segments. Information is gathered and transmitted between vehicles, satellites, and ground stations. Goals: reduce primary and secondary accidents, reduce congestion, and improve driver awareness of segment specific conditions.
<b>Category</b>	Road Weather
<b>ODOT Application Number</b>	<b>ODOT 23.</b>
<b>Benefits/Impact</b>	A high proportion of collisions are caused by adverse weather conditions. Though weather forecast is very reliable a real time weather advisories streamed to traffic management centers from connected vehicles can add robustness and pertinence to the prediction by giving the locally adequate warnings.
<b>Maturity</b>	With advances in RWIS, and other weather data collection and management systems, the weather related advisories and warning application is relatively mature and ready to be deployed once the infrastructure communications network and in-vehicle systems are available.
<b>Interface Requirements</b>	ITS Roadway Equipment, Maintenance and Construction Vehicle Platform, Weather Service
<b>Infrastructure Requirements</b>	Maintenance and Construction Management Center "Roadside Equipment" (RSE)
<b>Vehicle Component Requirements</b>	Maintenance and Construction Vehicle OBE, Dedicated Short Range Communications (DSRC)
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A

<b>Mapping Support</b>	Road Network

<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1+2
<b>Data Needs from Infrastructure</b>	App-specific

**Infographic**

The infographic is divided into several sections. At the top, a satellite with yellow solar panels orbits in space, emitting a signal. Below this, a blue horizontal bar contains a white icon of a bus and a white cloud icon. Underneath the bar, the text reads: **Motorist Advisories and Warnings** and *Issues alerts and advisories to travelers about deteriorating road and weather conditions on specific roadway segments*. The main illustration shows a street scene with a blue bus, traffic lights, and buildings. A dashed white line indicates a signal path from the satellite to a street sign. A blue arrow points from the cloud icon to a circular warning sign that says "Fog/Visibility". The U.S. Department of Transportation logo is in the bottom right corner.

**Table 2.42: Road Weather ▶ Enhanced Maintenance Decision Support System**

<b>Title</b>	Enhanced Maintenance Decision Support System (MDSS)
<b>CVRIA Reference</b>	<a href="#">Enhanced Maintenance Decision Support System</a>
<b>Description</b>	Prototype is a decision support tool that integrates relevant road weather forecasts, coded maintenance rules of practice, and maintenance resource data to provide winter maintenance managers with recommended road treatment strategies. “The Enhanced Maintenance Decision Support System application incorporates the additional information that can come from collecting road weather data from connected vehicles into the existing Maintenance Decision Support System (MDSS) capabilities” ( <i>U.S. DOT 2015g</i> ).
<b>Category</b>	Road Weather
<b>ODOT Application Number</b>	<b>ODOT 24.</b>
<b>Benefits/Impact</b>	The application has the potential to enhance safety and efficiency and non-intrusive maintenance works.
<b>Maturity</b>	As of 2004, MDSS technologies were mature enough for private sector companies to incorporate MDSS capabilities into their product lines for State DOT clients.
<b>Interface Requirements</b>	ITS Roadway Equipment, Maintenance and Construction Vehicle Platform, Weather Service
<b>Infrastructure Requirements</b>	Maintenance and Construction Management Center "Roadside Equipment" (RSE)
<b>Vehicle Component Requirements</b>	Maintenance and Construction Vehicle OBE, Dedicated Short Range Communications (DSRC)
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT.</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No

**Table 2.43: Road Weather ▶ Vehicle Data Translator**

<b>Title</b>	Vehicle Data Translator (VDT)
<b>CVRIA Reference</b>	--
<b>Description</b>	The main function of the VDT is to quality-check individual vehicle probe data elements, such as temperature and pressure, and then combine them into “derived observations” that are valid along a given length of roadway over a given time period. The prototype VDT includes a data parser function that extracts relevant weather and road condition vehicle probe fields from the vehicle data network. The data elements selected for extraction will be determined by research results and feedback from stakeholders in both the atmospheric and surface transportation communities. Data elements can also be added or subtracted as needs vary. The data flowing out of the data parser is still considered raw as it has not been processed in any way ( <i>Drobot et al. 2010</i> ).
<b>Category</b>	Road Weather
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The application will aid drivers and traffic management personnel with decision support tools in the form of real time data pertained to weather and road condition and vehicle status.
<b>Maturity</b>	The technology for implementing this application are mature.
<b>Interface Requirements</b>	ITS Roadway Equipment, Maintenance and Construction Vehicle Platform, Weather Service
<b>Infrastructure Requirements</b>	Maintenance and Construction Management Center "Roadside Equipment" (RSE)
<b>Vehicle Component Requirements</b>	Maintenance and Construction Vehicle OBE, Dedicated Short Range Communications (DSRC)
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b>
<b>Physical RSE Installation</b>	Portable or Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes

**Table 2.44: Road Weather ▸ Weather Response Traffic Info**

<b>Title</b>	Weather Response Traffic Info (WxTINFO)
<b>CVRIA Reference</b>	<a href="#">Variable Speed Limits for Weather-Responsive Traffic Management</a>
<b>Description</b>	Real time weather information streamed from connected vehicles and fixed stations to adjust and adapt the roadway network and travel conditions for other vehicles. Goal: reduce the impact of adverse weather on travelers.
<b>Category</b>	Road Weather
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Weather has a large impact on safety, mobility, and productivity. Approximately 24 percent of all collisions are weather related, through the use of adaptive strategies driven by real time weather on the vehicles, lives could be saved with WxTINFO. Adverse weather causes massive delays on the nations freeways, 23 percent of non-recurrent delay is due to adverse weather. All of these delays lead to more overhead for drivers on the road network. The WxTINFO could reduce all of these impacts significantly.
<b>Maturity</b>	This application is currently being tested in Michigan. Similar types of applications are used all around the country using only stationary sources of data.
<b>Interface Requirements</b>	Backhaul communication connection with cell provider, a means to utilize the information effectively.
<b>Infrastructure Requirements</b>	Server and software to process the data, weather recording devices.
<b>Vehicle Component Requirements</b>	Transmitting device from car to cell tower.
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b> State DOTs would be able to implement a system like this on their network today. The system could utilize fixed source data to post automatically to DMS's or they could use the weather to change the speed limits on a network. In urban areas this system could be used during large rainfall events to warn of flooding.
<b>Physical RSE Installation</b>	Yes, Fixed – Fixed Station Data None – Vehicle Streaming Data

Infographic

**Weather-Responsive Traffic Management**  
Connected vehicles provide road weather information to assist in adjusting signal timing intervals at signalized intersections and posted speed limits, including near work zones, when severe weather affects road conditions

The infographic features a top orange banner with a white car icon, a 'SPEED LIMIT 45' sign, a weather icon (cloud with rain), and a 'SPEED LIMIT 30' sign. Below the banner, a 3D illustration shows a road scene with a work zone on the left, rain falling on the road, and several orange cars. A central system (represented by a tower) is connected to the cars via dashed lines. A callout bubble labeled 'Speed Reduction' points to a car. A 'WORK ZONE' sign is visible on the road. The bottom right corner contains the U.S. Department of Transportation logo.

## 2.6 FEE PAYMENT APPLICATIONS

Table 2.45: Fee Payment ▶ Tolling

<b>Title</b>	AASHTO: Tolling
<b>CVRIA Reference</b>	<a href="#">Electronic Toll Collection</a>
<b>Description</b>	Vehicle encounters RSU at or prior to tolled facility (bridge, roadway entrance, etc.); RSU announces toll requirement. Vehicle sends request for toll payment (possibly indicating type of vehicle) to RSU. RSU executes payment (either directly or via back office account transaction). RSU provides receipt (generally including occupancy data) to vehicle. During subsequent RSU encounters on tolled facility, RSU requests validation of paid toll; vehicle sends receipt to RSU to avoid enforcement actions.
<b>Category</b>	Fee Payment
<b>ODOT Application Number</b>	<b>ODOT 8.</b>
<b>Benefits/Impact</b>	User fees are an integral part in supporting transportation systems by means of collecting revenue to fund transportation projects, recuperate funds from a past project and sustain maintenance and operations costs for transportation infrastructure.
<b>Maturity</b>	Concept is mature using traditional RFID toll tags. Ready to be deployed as connected vehicles emerge in the market.
<b>Interface Requirements</b>	Tolling presence detection with bi-directional exchange of supporting account and traveler information. Possible access to a payment transaction system.
<b>Infrastructure Requirements</b>	Sign or equipment gantries, bridge and tunnel structures, and ferry docks. One RSU can cover an entire road.
<b>Vehicle Component Requirements</b>	Vehicle based DSRC communication system with HMI
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Optional
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Limited Domains

**Table 2.46: Fee Payment ▶ High Occupancy Toll Lanes**

<b>Title</b>	AASHTO: High Occupancy Toll Lanes
<b>CVRIA Reference</b>	<a href="#">High-Occupancy Toll Lanes</a>
<b>Description</b>	Toll lanes that provide higher occupancy vehicles such as buses, vanpools, and carpools with free or discounted passage, while all other vehicles are tolled. Goals: reduce delay at toll plazas and reduce congestion.
<b>Category</b>	Fee Payment
<b>ODOT Application Number</b>	<b>ODOT 9.</b>
<b>Benefits/Impact</b>	High Occupancy Toll (HOT) Lanes are managed lanes enabled by connected vehicles will provide a harmonized payment system across multiple jurisdictions, that is integrated with other multimodal payment mechanisms (including parking, transit, tolls, and other mobility solutions). Benefits of HOT Lanes can include reduced congestion, improved safety and air quality/energy consumption benefits as well.
<b>Maturity</b>	Idea is 20+ years old
<b>Interface Requirements</b>	None
<b>Infrastructure Requirements</b>	Reconfigured/new toll plazas, enforcement, signage
<b>Vehicle Component Requirements</b>	None
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed

**Table 2.47: Fee Payment ▶ Congestion Pricing**

<b>Title</b>	AASHTO: Congestion Pricing
<b>CVRIA Reference</b>	<a href="#">Congestion Pricing</a>
<b>Description</b>	RSU at boundary of congestion management area sends out announcement that vehicles entering the area will be charged a specified toll/fee. Vehicles send request for fee payment to RSU, and RSU communicates with Back office system to execute payment transaction. Back office provides payment receipt to RSU, and RSU forwards receipt to vehicle. During subsequent RSU encounters, RSU requests validation of paid toll; vehicle sends receipt to RSU to avoid enforcement actions. Goals: reduce Congestion, improve travel times, reduce emissions.
<b>Category</b>	Fee Payment
<b>ODOT Application Number</b>	<b>ODOT 10.</b>
<b>Benefits/Impact</b>	User fees are an integral part in supporting transportation systems by means of collecting revenue to fund transportation projects, recuperate funds from a past project and sustain maintenance and operations costs for transportation infrastructure. Benefits include reduced congestion, improved safety and environmental benefits.
<b>Maturity</b>	Concept is mature using traditional RFID toll tags. Ready to be deployed as connected vehicles emerge in the market.
<b>Interface Requirements</b>	Tolling presence detection with bi-directional exchange of supporting account and traveler information. Possible access to a payment transaction system.

## 2.7 MOBILITY APPLICATIONS

### 2.7.1 Enable Advanced Traveler Information System (Enable ATIS)

**Table 2.48: Enable ATIS ▶ Advanced Traveler Information System**

<b>Title</b>	Advanced Traveler Information System (ATIS)
<b>CVRIA Reference</b>	<a href="#">Advanced Traveler Information Systems</a>
<b>Description</b>	Enhanced traveler information services that record or infer user decisions and other contextual trip data that, when suitably processed can improve or transform system management functions. This service goal is to provide an effective way to provide travel information to users of the transportation system. This information may include like delays, incidents, oncoming work zones, emergency situations, and localized weather information updates ( <i>TRAC 2005</i> ).
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 1a &amp; 1b.</b>
<b>Benefits/Impact</b>	The implementation of ATIS enabled via connected vehicles will improve safety issues by decreasing the number of crashes, injuries and fatalities, and in turn, reduce medical costs, insurance costs, and property damage.
<b>Maturity</b>	ATIS without connectivity is already being used in industry. ATIS with connectivity has been demonstrated. Increasing penetration rate of connected vehicles and DSRC increases ATIS capabilities and may reduce agency costs for sensors and surveillance.
<b>Interface</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface,

<b>Requirements</b>	Driver-Vehicle Interface, Vehicle Systems Interface
<b>Infrastructure Requirements</b>	Infrastructure Communications Interface, and Vehicle Communications Interface. Data collection, and information transfer to the main communication center through a complex system of camera surveillance, patrol reporters and electronic traffic sensors.
<b>Vehicle Component Requirements</b>	Vehicle ATIS Applications and In-Vehicle Warning Systems
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day one
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1
<b>Data Needs from Infrastructure</b>	TI

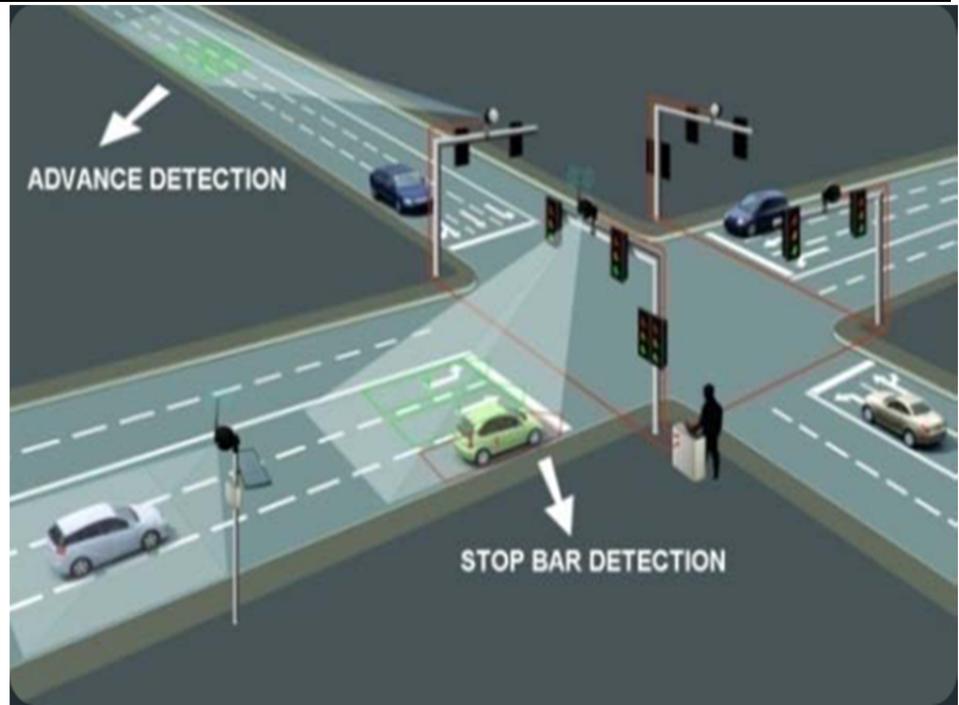

## 2.7.2 Multimodal Intelligent Traffic Signal System (MMITSS)

**Table 2.49: MMITSS ▶ Intelligent Traffic Signal System**

<b>Title</b>	Intelligent Traffic Signal System (I-SIG)
<b>CVRIA Reference</b>	<a href="#">Intelligent Traffic Signal System</a>
<b>Description</b>	I-SIG is the future of traffic signal systems. It provides comprehensive traffic information for all modes. The system uses connected vehicle technology to accommodate signal priorities. The system incorporates the needs of emergency vehicles, transit, freight, pedestrians, bicycles, and passenger vehicles. This system allows preemption for emergency vehicles and pedestrians, while increasing performance across the arterial network ( <i>U.S. DOT 2005</i> ).
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Improved mobility for all users. More efficient preemptive signal timing for emergency vehicles. Reduced wait time for all users. Less congestion. Less air pollution, due to reduction in idling. Safe simultaneous accommodation of emergency vehicles, transit, and pedestrians.
<b>Maturity</b>	I-SIG has been demonstrated, particularly in the Anthem, Arizona test bed. I-SIG is mature and does not require development of new technology ( <i>UA et al. 2014</i> ).
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.

<b>Infrastructure Requirements</b>	Infrastructure I-SIG Application (intersection geometric intersection description (GID), information on each vehicle (position, speed, and heading), minor road vehicle data (position and heading), infrastructure signage information).
<b>Vehicle Component Requirements</b>	Vehicle I-SIG Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b> State Highway System. Intersections operated under ODOT.
<b>Physical RSE Installation</b>	Fixed: RSE Intersection Management, RSE Situation Monitoring, RSE Environmental Monitoring, RSE Traffic Monitoring
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Lane Level
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	Yes: monitor and control RSE
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	required
<b>Benefits vs. Deployment Level</b>	Benefits Require Threshold Deployment Level
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1
<b>Data Needs from Infrastructure</b>	App-specific

**Infographic**

(Source <http://www.riviera-maya-news.com/playa-del-carmen-to-receive-first-intelligent-traffic-light-systems/2015.html>)

**Table 2.50: MMITSS ▶ Signal Priority (Transit & Freight)**

<b>Title</b>	Transit Signal Priority (TSP) and Freight Signal Priority (FSP)
<b>CVRIA Reference</b>	<a href="#">Transit Signal Priority</a> and <a href="#">Freight Signal Priority</a>
<b>Description</b>	This technology is used to improve the travel time of certain priority vehicles by providing traffic signal phasing priority according to the importance of the situation. Usually priority is granted through extending a green phase (green extension) or shortening a red phase (early green), while attempting to maintain signal progression that may exist on an arterial. Priority vehicles may include emergency vehicles, transit vehicles (including bus rapid transit) and/or commercial vehicles/trucks, and situations vary ( <i>Narrigan et al. 2007</i> ).
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	A Signal Priority system to complement an I-SIG and in coordination with the PREEMPT system would have a significant positive impact on safety related issues, by improving traffic flow, increasing the mobility of the emergency vehicles, and overall mobility enhancement.
<b>Maturity</b>	Signal priority is already being used in industry without connectivity. This application has been successfully demonstrated so no new technology needs to be developed. Widespread and consistent integration into existing and future fleets and roadside equipment remains a challenge.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, Driver-Vehicle Interface, Vehicle Systems Interface.
<b>Infrastructure Requirements</b>	Infrastructure Communications Interface, and Vehicle Communications Interface. Priority Application (intersection GID, information on each vehicle (position, speed, and heading), minor road vehicle data (position and heading), infrastructure signage information).
<b>Vehicle Component Requirements</b>	Vehicle Signal Priority Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others.</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional

<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Localized geometric
<b>Siting Dependency</b>	Non-critical

**Table 2.51: MMITSS ▶ Mobile Accessible Pedestrian Signal**

<b>Title</b>	Mobile Accessible Pedestrian Signal System (PED-SIG)
<b>CVRIA Reference</b>	<a href="#">Pedestrian Mobility</a>
<b>Description</b>	The concept of this application is to use a smartphone-type application to assist persons with vision impairment to cross intersections safely. This application would provide Signal Phasing and Timing (SPaT) information to the pedestrians via smartphone-type application. Providing the SPaT information would enhance safety and mobility at signalized intersection through enhancing the V2I cooperation ( <i>Liao 2013</i> )( <i>Liao et al. 2011</i> ).
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	As most fatal crashes occur in intersections, this technology would increase intersection crossing safety especially for people with visual impairment.
<b>Maturity</b>	At present some cities are providing SPaT data to application developers through certain channels (e.g. Enlighten by Connected Signals).
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure (PED-SIG) Application (intersection GID, information on each vehicle (position, speed, and heading), minor road vehicle data (position and heading), infrastructure signage information).
<b>Vehicle Component Requirements</b>	Vehicle (PED-SIG) Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others.</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Localized Geometrics
<b>Siting Dependency</b>	Critical
<b>Management of Collected Data</b>	No

<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Require Threshold Deployment Level

<b>Infographic</b>	 <p>(Source : <a href="https://goo.gl/8zxfPY">https://goo.gl/8zxfPY</a>)</p>

**Table 2.52: MMITSS ▶ Emergency Vehicle Preemption**

<b>Title</b>	Emergency Vehicle Preemption (PREEMPT)
<b>CVRIA Reference</b>	<a href="#">Emergency Vehicle Preemption</a>
<b>Description</b>	This system is used to provide emergency vehicles responding to a certain situation a green light as they approach a signalized intersection (and a green wave along a signalized arterial), and provide all red indications to any conflicting movements. After the emergency vehicle clears the intersection, the signals return to their normal operations. Preemption is

	subtly different than signal priority in that the phase transitions are immediate and concerns for maintaining progression are ignored for the sake of the emergency.
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The use of PREEMPT System would have a significant impact toward decreasing emergency vehicle response time, which contributes to the improvement of safety, and cost savings. The improvement in safety occurs by reducing the probability of delay of the responding vehicle in a conflicting intersection or encountering queuing issues. In addition, the probability of an emergency vehicle intersection crash is reduced. Finally, the reduced response time improves survivability for victims of medical emergencies.
<b>Maturity</b>	A non-connected (passive, no feedback) version of this technology is being used in industry, relying primarily on infrared emitters, not as an intelligent system. Several kind of emergency vehicles detection technology are currently available, which rely on infrared/visual light based systems and others that rely on audio detection.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure PREEMPT Application (intersection GID, information on the detected emergency vehicle (position, speed, heading and destination), minor road vehicle data (position and heading), and infrastructure signage information.
<b>Vehicle Component Requirements</b>	Vehicle PREEMPT Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others.</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Non-Critical
<b>Management of</b>	No

<b>Data Needs from Infrastructure</b>	App-specific
<b>Infographic</b>	 <p>The infographic depicts a multi-lane road intersection with a fire truck in the foreground. A large, semi-transparent blue dome is superimposed over the intersection, representing a data zone or sensor coverage area. In the background, a traffic light pole is visible with a sign that reads 'ROAD CLOSED AHEAD'. The scene is set in a clear, bright environment with green grass and trees.</p> <p>(Source: <a href="http://ops.fhwa.dot.gov/publications/fhwahop08024/chapter9.htm">http://ops.fhwa.dot.gov/publications/fhwahop08024/chapter9.htm</a>)</p>

### 2.7.3 Intelligent Network Flow Optimization (INFLO)

**Table 2.53: INFLO ▶ Dynamic Speed Harmonization**

<b>Title</b>	Dynamic Speed Harmonization (SPD-HARM)
<b>CVRIA Reference</b>	<a href="#">Speed Harmonization</a>
<b>Description</b>	The intention of using this technology is to adjust the maximum appropriate speed limit based on current traffic, road surface, demand and weather conditions through dynamic speed limit signs displayed on the intended segments of freeways and other roadways.

<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 2.</b>
<b>Benefits/Impact</b>	The implementation of this technology will help in the reduction of traffic congestion, through delaying the formation of traffic queues and smoothing traffic flow by eliminating dangerous speed differentials which would reduce the potential for crashes to occur due to this traffic situation, maintaining a smooth, safe traffic flow.
<b>Maturity</b>	At present variable speed limit and traffic flow smoothing systems are deployed in a limited number of permanent U.S. applications (as well as in Europe), and is also deployed in temporary work zone applications.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure (SPD-HARM) Application: Posted variable speed limit signs (traffic, weather and road condition information), information on each vehicle (position, speed, and heading)
<b>Vehicle Component Requirements</b>	Vehicle (SPD-HARM) Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Lane level
<b>Siting Dependency</b>	Localized Geometric
<b>Management of Collected Data</b>	Non-critical

(Source: <http://goo.gl/15smC1>)

**Table 2.54: INFLO ▶ Queue Warning**

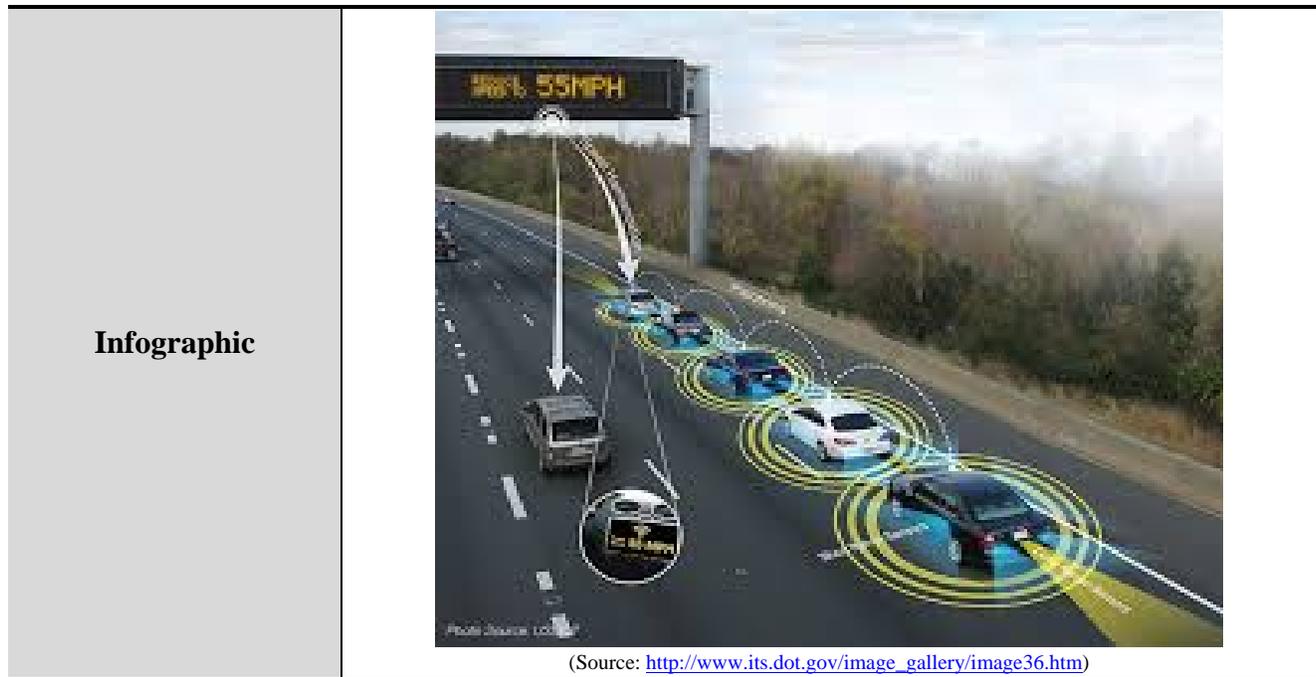

<b>Title</b>	Queue Warning (Q-WARN)
<b>CVRIA Reference</b>	<a href="#">Queue Warning</a>
<b>Description</b>	The intention of using this technology is to alert the road user of upcoming traffic congestion (queue) in order to prevent rear-end crashes. It is likely that this application would be combined with Dynamic Speed Harmonization (SPD-HARM). Drivers may choose to use this information for avoiding congestion by changing their travel route.
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 3.</b>
<b>Benefits/Impact</b>	By anticipating the downstream traffic condition, drivers can reduce their speed gradually and avoid emergency braking reducing rear-end and queuing-related crashes.
<b>Maturity</b>	Queue warning systems are in place in a limited number of locations in the U.S. and also in Europe, so the technology is relatively mature. The extension to the connected/cooperative environment is still to be implemented.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure (Q-WARN) Application: Posted dynamic warning signs (traffic, weather and road condition information), information on each vehicle (position, speed, and heading).
<b>Vehicle Component Requirements</b>	Vehicle (Q-WARN) Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Lane level
<b>Siting Dependency</b>	Non-critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	Low

<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits require threshold deployment level
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1
<b>Data Needs from Infrastructure</b>	TI
<b>Infographic</b>	 <p>(Source: <a href="http://www.mobilevms.co.uk/">http://www.mobilevms.co.uk/</a>)</p>

**Table 2.55: INFLO ▶ Cooperative Adaptive Cruise Control**

<b>Title</b>	Cooperative Adaptive Cruise Control (CACC)
<b>CVRIA Reference</b>	<a href="#">Cooperative Adaptive Cruise Control</a>
<b>Description</b>	This technology functions similar to traditional in-vehicle cruise control systems but with one exception. When the leading vehicles slow down, the following equipped vehicle receives this information immediately and can react much faster than the driver can. When the CACC system detects that the leading vehicles have accelerated, the equipped vehicle returns to its set speed ( <i>Jones and Philips 2013, Park et al. 2011</i> ).
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	With this technology, the communication between the vehicles and infrastructure increase the capability of maintaining safety and at the same time, increase overall traffic safety and efficiency.

<b>Maturity</b>	Adaptive cruise control systems are on the market that relies in extensive in-vehicle sensing capabilities. Cooperative/connected systems are on the horizon.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure (CACC) Application (traffic, weather and road condition information), information on each vehicle (position, speed, and heading)
<b>Vehicle Component Requirements</b>	Vehicle (CACC) Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Priority 2: ODOT Should Monitor, Possibly Collaborate, Leadership by Others</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Lane Level
<b>Siting Dependency</b>	Non-critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Not Required
<b>Benefits vs. Deployment Level</b>	Benefits require threshold deployment level
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1
<b>Data Needs from Infrastructure</b>	App-specific

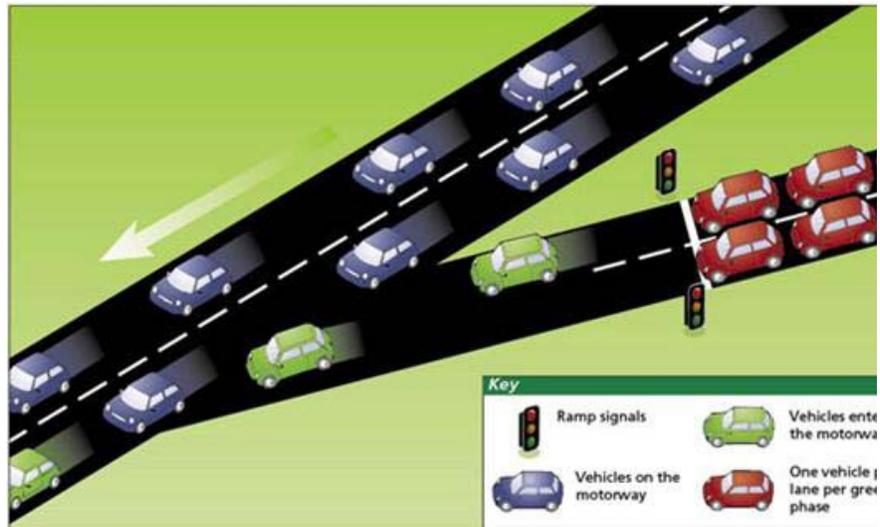

**Table 2.56: INFLO ▶ Next Generation Ramp Metering**

<b>Title</b>	AASHTO: Next Generation Ramp Metering (RAMP)
<b>CVRIA Reference</b>	<a href="#">Eco-Ramp Metering</a>
<b>Description</b>	Converting existing ramps to use density-based actuation, rather than capacity based. Additionally, systematic breakdowns related to the ramp filling to capacity are reduced. This will reduce delay and improve ramp metering options
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 4.</b>
<b>Benefits/Impact</b>	The primary benefit is the improvement in travel times. Through the change from capacity to demand-based actuation, and from better metrics to reduce the occurrence of system breakdown, travel delay can be reduced. This will allow travelers to reach their destinations faster, reduce emissions, and reduce congestion.
<b>Maturity</b>	While RAMP is still in its infancy, the systems it is based on have been in existence for decades.
<b>Interface Requirements</b>	None
<b>Infrastructure Requirements</b>	Existing ramp meters that are able to be recalibrated, or the equipment and personnel for new ramp meters

<b>Vehicle Component Requirements</b>	None
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b> As ODOT is in charge of all freeways, and ramps are used almost exclusively on freeways, RAMP is highly applicable.
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	Not critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	Medium
<b>Vehicle Data Connection</b>	Not required
<b>Benefits vs. Deployment Level</b>	Day one
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	TI, SPaT (if applicable, e.g. a short ramp that is located near a signal)

Infographic

## 2.7.4 Response, Emergency Staging, Communication, Uniform Management, and Evaluation (RESCUME)

**Table 2.57: RESCUME ▸ Incident Guidance Emergency Response**

<b>Title</b>	Incident Scene Pre-Arrival Staging Guidance for Emergency Responders (RESP-STG)
<b>CVRIA Reference</b>	<a href="#">Incident Scene Pre-Arrival Staging Guidance for Emergency Responders</a>
<b>Description</b>	The purpose of RESP-STG is to provide situational awareness of the incident to the emergency responders and emergency centers. Additionally, it aims to coordinate among all emergency responders, upon dispatch and en-route in order to address the incident in an efficient manner and deploy secondary responders, if necessary. Data sources will include staging plans, satellite imagery, geographic information system (GIS) maps, current weather data, sensor readings, and real-time modeling outputs. ( <i>U.S. DOT RESCUME 2012</i> )
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 16.</b>
<b>Benefits/Impact</b>	<ul style="list-style-type: none"> <li>• Provide prompt response to the victims.</li> <li>• Clear the incidents sooner to provide care for victims involved in the incident and to facilitate mobility.</li> <li>• Increase awareness among emergency responders, providing the location and arrival of other responders.</li> <li>• Improve preparedness of response teams with status updates of victims in involved in incident.</li> </ul>
<b>Maturity</b>	Incident management systems and computer-aided dispatch are already prevalent in industry. The connected/cooperative capability is not yet implemented.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure (RESP-STG) Application (information on each vehicle i.e. position, speed, and heading, minor road vehicle data i.e. position and heading, infrastructure signage information).
<b>Vehicle Component Requirements</b>	Vehicle (RESP-STG) Application and In-Vehicle Warning System
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Equipment is fixed in the emergency response vehicle in the form of a Mobile Data Terminal (MDT)
<b>Roadside Interface to Local</b>	Roadside interface to local would be beneficial for emergency responders to be able to contact the local roadway users involved in an incident but it is not necessary.
<b>Backhaul</b>	Backhaul communication is required since there will need to be

<b>Communications</b>	communication between emergency responders, dispatchers, and local emergency centers.
<b>Backhaul Restrictions</b>	Some of the restrictions involved with communication include a lack of interoperability among emergency responder and a lack of shared situational awareness.
<b>Mapping Support</b>	Digital mapping, road network, topography
<b>Siting Dependency</b>	Siting is critical for this application since it is dependent on providing the situational awareness of the incident to the emergency responders. For example, still and video images will play a large role in supporting the assessment and approach of emergency responders.
<b>Management of Collected Data</b>	Management of the collected data will not be critical for the use of this application. For emergency responders to all be equally informed of the incident, all the collected data should be shared amongst responders. However, should the amount of data become excessive, it will need to be downsized to a more manageable amount that provides for efficient communication.
<b>Back Office Services/Applications</b>	Yes; dispatchers and emergency treatment centers
<b>Latency</b>	Medium; much of the data is available but transmitting it collectively to multiple emergency responders provides a challenge.
<b>Vehicle Data Connection</b>	Required, between all emergency responders and dispatchers
<b>Benefits vs. Deployment Level</b>	Potential to show rapid benefits, by reducing fatalities of incidents due to more efficient response services.
<b>Other Dependency</b>	Dependency on emergency treatment center communications and medical care.
<b>Data Needs from OBU</b>	Geographic location of all emergency responders, response equipment available, and intended approach for response to the incident.
<b>Data Needs from Infrastructure</b>	SPaT – allowing emergency vehicles to take priority GIDs – showing current location of all response vehicles

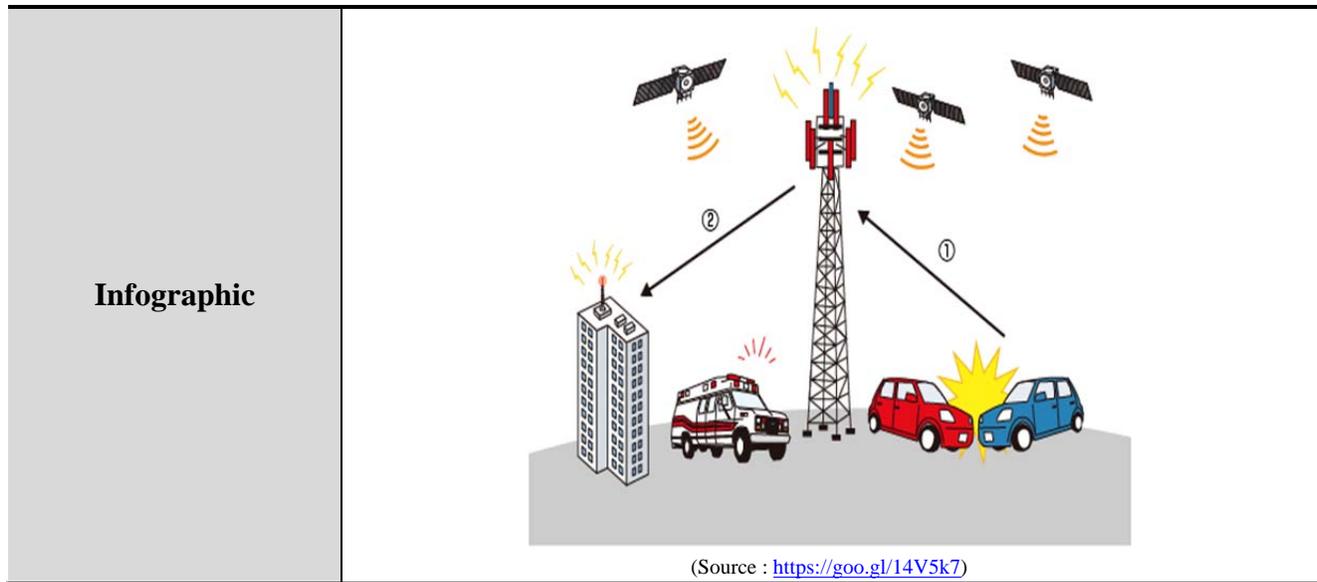

Infographic

**Information and Routing Support for Emergency Responders**

Provides information on deteriorating road and weather conditions on specific roadway segments to emergency responders, including ambulance operators, paramedics, and fire and rescue organizations, to determine response routes, calculate response times, and influence decisions to hand off an emergency call from one responder to another responder in a different location

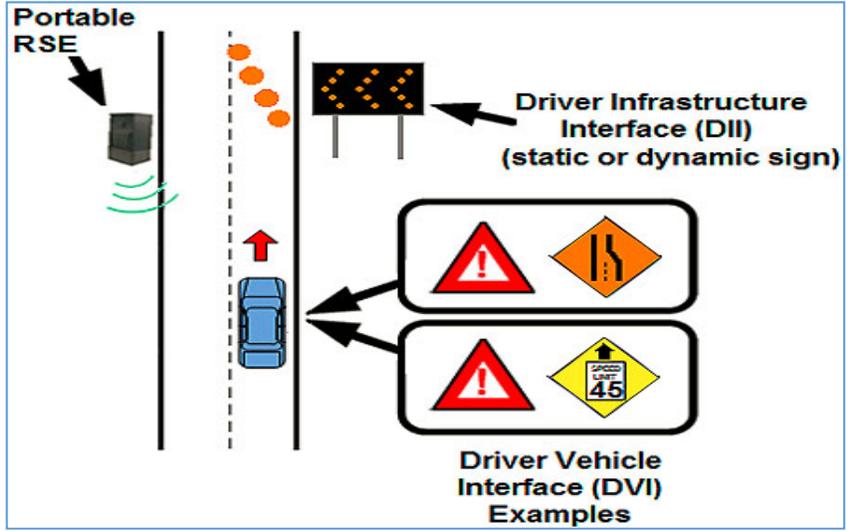

**Table 2.58: RESCUME ▶ Incident Scene Work Zone Alerts**

<b>Title</b>	Incident Scene Work Zone Alerts (INC-ZONE)
<b>CVRIA Reference</b>	<a href="#">Incident Scene Work Zone Alerts for Drivers and Workers</a>
<b>Description</b>	<p>INC-ZONE is an ITS application that is part of the Response, Emergency Staging and Communications, Uniform Management, and Evacuation (RESCUME) bundle. The RESCUME bundle is designed to provide advance vehicle-to-vehicle safety messaging short-range communications to improve the safety of emergency responders and travelers.</p> <p>INC-ZONE, as a part of this bundle, is designed to improve the safety of workers in work zones along highways and drivers. The application is made up of two components, one that warns drivers that they are approaching a temporary work zone, and another that informs public safety personnel and other workers in the zone of potentially unsafe conditions.</p>
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 17.</b>
<b>Benefits/Impact</b>	The benefits of INC-ZONE are increasing safety on the highways in temporary work zones. The application will reduce the likelihood of work zone incidents, and communicate real-time roadside alerts for various temporary conditions on highways from work zones to traffic stops.
<b>Maturity</b>	Testing completed in Columbus, Ohio and Aberdeen, Maryland during Spring 2014.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, and Infrastructure Communications Interface.
<b>Infrastructure</b>	Infrastructure (INC-ZONE) Application (information on each vehicle i.e.

<b>Requirements</b>	position, speed, and heading, infrastructure signage information)
<b>Vehicle Component Requirements</b>	Vehicle (INC-ZONE) Application and In-Vehicle Warning System ( <i>U.S. DOT RESCUME 2012</i> ).
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Portable
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	None
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Medium
<b>Vehicle Data Connection</b>	Not Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	Position
<b>Data Needs from Infrastructure</b>	App-Specific

Infographic

(Source: <https://www.pcb.its.dot.gov/eprimer/module13.aspx>)

**Table 2.59: V2I Safety ▶ Reduced Speed Zone Warning**

<b>Title</b>	Reduced Speed Zone Warning (RSZW)
<b>CVRIA Reference</b>	<a href="#">Reduced Speed Zone Warning / Lane Closure</a>
<b>Description</b>	This technology is designed to be used to warn drivers of excessive speeds compared with the posted speed limit in reduced speed zones and changed roadway configurations. Reduced speed zones may include school zones, work zones, highly populated areas ( <i>U.S. DOT 2015d</i> ).
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Rural areas have less staffing and law enforcement to help control traffic speed in work zones. Due to this they must rely on signage and other methods to slow drivers down. A reduce speed/work zone warning system in place is the smart drum speed enforcement system. This system causes drivers to reduce their speed when they see the flashing lights. The lights also warn workers that speeding vehicles are approaching, providing time to these workers to take precautions where before they had no warning. The combined effect of slowing traffic and warning workers is predicted to reduce the number and severity of collisions in work zones.
<b>Maturity</b>	Smart work zone systems have been deployed but the connected/cooperative elements are not deployed yet.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, Driver-Infrastructure Interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure RSZW Application, Posted Speed Limit, Roadway Work Zone Configuration Information, Roadway Work Zone Operations Information (legal movements), Vehicle Speed (of the detected vehicle or highest vehicle speed if more than one vehicle is), and Current DII Message (alert/warning/default).
<b>Vehicle Component Requirements</b>	Vehicle RSZW Application and In-Vehicle Warning System
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Portable
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	None

<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Not Required

**Table 2.60: RESCUME ▶ Emergency Communications/Evacuation**

<b>Title</b>	Emergency Communications and Evacuation (EVAC)
<b>CVRIA Reference</b>	<a href="#">Emergency Communications and Evacuation</a>
<b>Description</b>	This technology provides important information for emergency evacuation situations relating to people who require assistance and guidance by providing information about assistance providers, and other resources. In addition, this technology provides information for traffic and road conditions, fuel and other important essential requirements for travelers required to evacuate an area due to an emergency situation ( <i>U.S. DOT 2015h</i> ).
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 18.</b>
<b>Benefits/Impact</b>	This technology increase the safety for people by providing information for people in need of assistance, providing nearby resources information, and providing situational information for the travelers about the traffic and emergency situation.
<b>Maturity</b>	Emergency evacuation communications is currently not centralized or individual specific. Components of this technology are mature, but the assembled products are not fully developed.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure (EVAC) Application (information on each vehicle i.e. position, speed, and heading, infrastructure signage information)
<b>Vehicle Component Requirements</b>	Vehicle (EVAC) Application and In-Vehicle Warning System ( <i>U.S. DOT RESCUME 2012</i> ).
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Portable
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Limited Domains
<b>Mapping Support</b>	Lane Level

### 2.7.5 Integrated Dynamic Transit Operations (IDTO)

**Table 2.61: IDTO ▶ Connection Protection**

<b>Title</b>	Transit Connection Protection (T-CONNECT)
<b>CVRIA Reference</b>	<a href="#">Transit Connection Protection</a>
<b>Description</b>	Application that enables improved coordination between public transportation profilers and travelers to improve the probability of successful transit transfers. Application would result in trip time reduction and increase travelers’ satisfaction using public, private and shared-ride transportation systems.
<b>Category</b>	Mobility
<b>ODOT Application</b>	--

<b>Number</b>	
<b>Benefits/Impact</b>	Reduces safety risks for transit transfers by eliminating uncertainty from perspectives of operators and users. Reduces risk in ridesharing situations through identity verification.
<b>Maturity</b>	Transit providers already provide useful schedule and real time information to users via mobile applications. Linkages toward guaranteeing connections are still not developed but hold significant promise.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure (T-Connect) Application
<b>Vehicle Component Requirements</b>	Vehicle (T-Connect) Application and interface with CAD/AVL system ( <i>U.S. DOT IDTO 2012</i> ).
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	Other

<p><b>Data Needs from Infrastructure</b></p>	<p>TI</p>
<p><b>Infographic</b></p>	 <p><b>Connection Protection</b>      Gives passengers real-time transit information to more accurately predict whether they will make their next connection. A passenger can use their personal mobile device to initiate a request for a connection to wait. If multiple people on a delayed transit vehicle will miss their next connection, transportation providers can adjust departures to enable the passengers to make their next connection.</p>
<p><b>Other Image</b></p>	 <p>(Source: <a href="http://ntl.bts.gov/lib/jpodocs/repts_te/14074.htm">http://ntl.bts.gov/lib/jpodocs/repts_te/14074.htm</a>)</p>

**Table 2.62: IDTO ▶ Dynamic Transit Operations**

<p><b>Title</b></p>	<p>Dynamic Transit Operations (T-DISP)</p>
<p><b>CVRIA Reference</b></p>	<p><a href="#">Dynamic Transit Operations</a></p>
<p><b>Description</b></p>	<p>This application will allow travelers to request trips using a variety of media and seeks to enhance existing on-board and central systems to provide public transportation and shared-ride services. A central system, such as a Travel Management Coordination Center, or decentralized system would dynamically schedule and dispatch or modify the route of an in-service vehicle by matching compatible trips together. The</p>

	<p>application may consider both public and private (e.g., taxi) transportation providers and may include para-transit, fixed -route bus, flex-route bus, and rail transit services.</p> <p>Travelers would be able to request a trip via a handheld mobile device (or phone or personal computer) and have itineraries containing multiple transportation services (public transportation modes, private transportation services, shared-ride, walking, and biking) sent to them via the same handheld device.</p> <p>The goal of this application is to provide greater links between available transportation service resources with travelers through dynamic transit vehicle scheduling, dispatching, and routing capabilities.</p>
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The major benefit to T-DISP is that the traveler has the ability to access real-time information about available travel options in order to best manage their commute. This improves the efficiency of travel by transit or rideshare. This also improves accessibility to transit as availability is more flexible to the user which in turn can encourage travelers to choose transit over autos and assist in reducing congestion.
<b>Maturity</b>	<p>There are two T-DISP programs in the U.S.:</p> <ul style="list-style-type: none"> <li>• USDOT’s United We Ride / Mobility Services for All Americans (UWR/MSAA) – 8 sites across the U.S. were chosen for grant awards for the planning and designing of traveler management coordination centers. This includes the integration of dispatching and scheduling information from multiple regional transportation providers, introduction of a universal cashless fare and call center improvement to include customer-oriented features, such as automated telephone and internet-based trip reservations and management.</li> <li>• Lynx – Transit agency in Orlando, FL working toward bus systems that would serve stations at designated locations according to the user’s request rather than by a fixed schedule.</li> </ul>
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, and Infrastructure Communications Interface
<b>Infrastructure Requirements</b>	Infrastructure (T-DISP)
<b>Vehicle Component Requirements</b>	Vehicle (T-DISP) Application links with CAD/AVL systems ( <i>U.S. DOT IDTO 2012</i> ).
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	No

<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	Other
<b>Data Needs from Infrastructure</b>	Other
<b>Infographic</b>	 <p>(Source : <a href="https://goo.gl/L8vYjW">https://goo.gl/L8vYjW</a>)</p>

**Table 2.63: IDTO ▸ Dynamic Ridesharing**

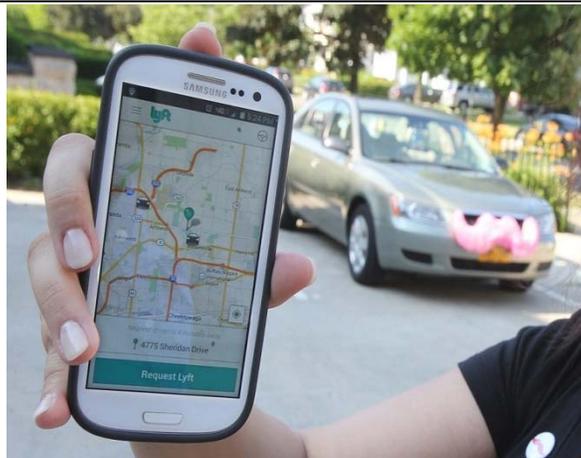

<b>Title</b>	Dynamic Ridesharing (D-RIDE)
<b>CVRIA Reference</b>	<a href="#">Dynamic Ridesharing</a>
<b>Description</b>	This technology expands the traditional carpooling approach, and builds on the more recent mobile app-based on-demand ride services linking demand for destinations even if they are not served by public transportation. This system would reduce the demand on the public

	transportation during the peak hours of the day. This system depends on gathering passenger information system to help in supporting the non-transit ride sharing and on-demand services.
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	There would be increased security benefits due to guarantees of identity.
<b>Maturity</b>	This system builds on existing ridesharing/matching systems and more recent app-based on-demand ride services.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure (D-RIDE) Application.
<b>Vehicle Component Requirements</b>	Vehicle (D-RIDE) Application
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	None
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes

## 2.7.6 Freight Advanced Traveler Information System (FRATIS)

**Table 2.64: FRATIS ▶ Freight Dynamic Travel Planning & Performance**

<b>Title</b>	Freight-Specific Dynamic Travel Planning and Performance
<b>CVRIA Reference</b>	<a href="#">Freight-Specific Dynamic Travel Planning</a>
<b>Description</b>	This technology uses traveler and freight information including dynamic routing, and performance monitoring elements. Information such as wait times at ports, road closures, work zones and route restrictions would be included. Adding to that, this system enhances the efficiency of freight mobility, energy consumption, and safety for shippers.
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 5.</b>
<b>Benefits/Impact</b>	This application could enhance enforcement and regulatory activities including safety checks and hours of service.
<b>Maturity</b>	Many states already have weigh-in-motion and weigh stations for freight related enforcement. This system builds on those existing systems.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure Application.
<b>Vehicle Component Requirements</b>	Vehicle Application
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Limited Domains
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required

<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1+other
<b>Data Needs from Infrastructure</b>	TI
<b>Infographic</b>	None

**Table 2.65: FRATIS ▶ Drayage Optimization**

<b>Title</b>	Drayage Optimization
<b>CVRIA Reference</b>	<a href="#">Freight Drayage Optimization</a>
<b>Description</b>	Drayage is the transport of goods over a short distance, often as part of a longer overall move and is typically completed in a single work shift. This application would optimize truck/load movements between freight facilities, balancing early and late arrivals.
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Reductions in truck miles will proportionally reduce propensity for crashes ( <i>U.S. DOT 2012</i> ).
<b>Maturity</b>	Private industry is already performing freight optimization internally. Future potential for incorporating connected vehicle data will further enhance the system's capabilities.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure Application.
<b>Vehicle Component Requirements</b>	Vehicle Application
<b>Applicability</b>	<b>Priority 3: Leadership by Others, ODOT Monitor</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required

<b>Benefits vs. Deployment Level</b>	Benefits Require Threshold Deployment Level
<b>Other Dependency</b>	Privacy
<b>Data Needs from OBU</b>	BSM1+other
<b>Data Needs from Infrastructure</b>	TI
<b>Infographic</b>	None

## 2.8 SMART ROADSIDE APPLICATIONS

**Table 2.66: Smart Roadside ▶ Wireless Inspection**

<b>Title</b>	Wireless Inspection
<b>CVRIA Reference</b>	<a href="#">Smart Roadside Initiative</a>
<b>Description</b>	An application that will utilize roadside sensors to transit identification, hours of service, and sensor data directly from trucks to carriers and government agencies. It will increase the number of electronic screenings and provide enhanced safety and credentials assessments such as basic identification of the driver and carrier, hours of service and general mechanical conditions of the vehicle.
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 25.</b>
<b>Benefits/Impact</b>	The safety benefits are freight efficiency, operational cost saving.
<b>Maturity</b>	This application is under research ( <i>U.S. DOT JPO 2011</i> ).
<b>Interface Requirements</b>	Roadside interface to local, Backhaul, Back-Office services
<b>Infrastructure Requirements</b>	Roadside Equipment (RSE)
<b>Vehicle Component Requirements</b>	Vehicle OBE, Dedicated Short Range Communications (DSRC)
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Yes, required

<b>Backhaul Restrictions</b>	Limited Domains
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Noncritical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	Medium latency
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits realizable by day one.
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	Required: BSM 1+2+Other
<b>Data Needs from Infrastructure</b>	App-specific

<b>Infographic</b>	 <p style="text-align: center;">(Source <a href="https://www.kapsch.net/us/ktc-system-that-helps-you-stay-in-your-lane/">https://www.kapsch.net/us/ktc-system-that-helps-you-stay-in-your-lane/</a>)</p>
--------------------	---

**Table 2.67: Smart Roadside ▶ Smart Truck Parking**

<b>Title</b>	Smart Truck Parking
<b>CVRIA Reference</b>	<a href="#">Smart Roadside Initiative</a>
<b>Description</b>	An application that will provide information such as hours of service constraints, location and supply of parking, travel conditions, and loading/unloading scheduling to allow commercial drivers to make advanced route planning decisions.
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	<b>ODOT 26.</b>
<b>Benefits/Impact</b>	Reduces the potential of accident due to fatigued driving, safer parking decision and removes trucks from shoulders.
<b>Maturity</b>	This application is under research.
<b>Interface Requirements</b>	Roadside interface to local, Backhaul, Back-Office services
<b>Infrastructure Requirements</b>	Roadside Equipment (RSE)
<b>Vehicle Component Requirements</b>	Vehicle OBE, Dedicated Short Range Communications (DSRC)
<b>Applicability</b>	<b>Priority 1: Near Term Focus for ODOT</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Limited Domains
<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	Medium
<b>Vehicle Data Connection</b>	Not Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None

<b>Data Needs from OBU</b>	Other
<b>Data Needs from Infrastructure</b>	App-Specific
<b>Infographic</b>	 <p>(Source <a href="http://www.overdriveonline.com/national-smart-truck-parking-system-in-the-works-will-show-real-time-parking-info/">http://www.overdriveonline.com/national-smart-truck-parking-system-in-the-works-will-show-real-time-parking-info/</a>)</p>

No.	Source	Group	Application Name	Acronym	CVRIA Application Name	Similar Application
<b>V2I SAFETY</b>						
A. 2.		V2I Safety	AASHTO: Stop Sign Violation		<a href="#">Stop Sign Violation Warning</a>	See Application 4.
A. 3.		V2I Safety	AASHTO: Driver Gap at Signalized Intersections		<a href="#">Red Light Violation Warning</a>	See Application 2.
<b>AGENCY DATA</b>						
A. 4.		Agency Data Applications	AASHTO: CV-Enabled Traffic Model Baselineing			See Application 17.
A. 5.		Agency Data Applications	AASHTO: CV-Enabled Predictive Traffic Studies			See Application 17.
<b>MOBILITY: EnableATIS • MMITSS • INFLO • RESCUME • IDTO • FRATIS</b>						
A. 6.		FRATIS	AASHTO: Real-Time Reliable Information	F-ATIS	<a href="#">Real-Time Reliable Information (F-ATIS)</a>	
A. 7.		FRATIS	AASHTO: Dynamic Route Guidance	F-DRG	<a href="#">Dynamic Route Guidance (F-DRG)</a>	
A. 8.		FRATIS	AASHTO: Information for Freight Carriers		<a href="#">Road Weather Information for Freight Carriers</a>	

**Table A. 2: V2I Safety ▶ AASHTO: Stop Sign Violation**

<b>Title</b>	AASHTO: Stop Sign Violation
<b>CVRIA Reference</b>	<a href="#">Stop Sign Violation Warning</a>
<b>Description</b>	See Application 4. RSU in vicinity of stop sign sends out stop sign locations and directions. Vehicle OBU receives stop sign info and determines if a warning is appropriate.
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Improves safety at un-signalized intersections with posted stop signs by providing warnings to the driver approaching an un-signalized intersection.
<b>Maturity</b>	Elements in the application have been developed and individual components are relatively mature, but this does not exist as a stand-alone package at this stage.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, Driver-Infrastructure Interface, Driver-Vehicle Interface, Vehicle Systems Interface.
<b>Infrastructure Requirements</b>	Infrastructure Communications Interface, and Vehicle Communications Interface, Infrastructure SSGA Application.
<b>Vehicle Component Requirements</b>	Vehicle SSGA Application, and In-Vehicle Warning System.
<b>Applicability</b>	<b>Not on ODOT Priority List</b> ; Similar to Application 4.
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	None
<b>Backhaul Restrictions</b>	N/A
<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	No
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Required

<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	GIDs/Maps
<b>Infographic</b>	None

**Table A. 3: V2I Safety ▶ AASHTO: Driver Gap at Signalized Intersections**

<b>Title</b>	AASHTO: Driver Gap at Signalized Intersections
<b>CVRIA Reference</b>	<a href="#">Red Light Violation Warning</a>
<b>Description</b>	See Application 2. Road Side Equipment at signalized intersection determines the locations and speeds of oncoming vehicles. This information plus SPAT data is broadcast in vicinity of intersection. Vehicle OBU receives oncoming vehicle information and SPAT information, and determines if a warning is appropriate.
<b>Category</b>	Vehicle to Infrastructure Safety
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The application in the vehicle uses the vehicle’s speed and acceleration profile, along with the signal timing and geometry information to determine if it appears the vehicle will enter the intersection in violation of a traffic signal laws for that state. If the violation seems likely to occur, a warning can be provided to the driver.
<b>Maturity</b>	Red light enforcement systems already are in widespread use. In-vehicle warning systems have been tested and the individual technology components are mature but the system as a package has not yet been deployed.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside Interface, Driver-Vehicle Interface, Vehicle Systems Interface, Infrastructure Communications Interface, and Vehicle Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure RLVW Application (intersection GID, count of detected vehicles, information on each detected vehicle i.e. position, speed, and heading, minor road vehicle data i.e. position and heading, infrastructure signage information).
<b>Vehicle Component Requirements</b>	Vehicle RLVW Application and In-Vehicle Warning System.
<b>Applicability</b>	<b>Not on ODOT Priority List</b> ; Similar to Application 2.
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	Yes
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Localized Geometric
<b>Siting Dependency</b>	Critical
<b>Management of Collected Data</b>	No

<b>Back Office Services/Applications</b>	No
<b>Latency</b>	Low
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	None
<b>Data Needs from Infrastructure</b>	SPaT
<b>Infographic</b>	None

**Table A. 4: Agency Data Applications ▶ AASHTO: CV-Enabled Traffic Model Baseline**

<b>Title</b>	AASHTO: CV-Enabled Traffic Model Baseline
<b>CVRIA Reference</b>	
<b>Description</b>	See Application 17. Vehicles provide speed information as a function of location and time in order to build a baseline model for analysis, optimized timing plans and predictive studies. Does not require real time connection for the model, real time traffic necessary to capture perturbations to the model.
<b>Category</b>	Agency Data Applications
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Agencies can save substantial resources devoted to data collection for traffic modeling.
<b>Maturity</b>	In general data collection for traffic modeling, traffic monitoring, and HPMS are very mature.
<b>Interface Requirements</b>	None
<b>Infrastructure Requirements</b>	Infrastructure data interface
<b>Vehicle Component Requirements</b>	Vehicle application and interface
<b>Applicability</b>	<b>Not on ODOT Priority List</b> ; Similar to Application 17.
<b>Physical RSE Installation</b>	Portable or Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Not Required
<b>Benefits vs.</b>	Benefits Realizable Day One

<b>Deployment Level</b>	
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1
<b>Data Needs from Infrastructure</b>	None
<b>Infographic</b>	None

**Table A. 5: Agency Data Applications ▶ AASHTO: CV-Enabled Predictive Traffic Studies**

<b>Title</b>	AASHTO: CV-Enabled Predictive Traffic Studies
<b>CVRIA Reference</b>	
<b>Description</b>	See Application 17. Vehicles provide speed information as a function of location and time in order to build a baseline model for analysis, optimized timing plans and predictive studies. Does not require real time connection for the model, real time traffic necessary to capture perturbations to the model.
<b>Category</b>	Agency Data Applications
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Agencies can save substantial resources devoted to data collection for predictive traffic studies.
<b>Maturity</b>	In general, data collection and processing for predictive traffic studies is very mature.
<b>Interface Requirements</b>	None
<b>Infrastructure Requirements</b>	Infrastructure data interface
<b>Vehicle Component Requirements</b>	Vehicle application and interface
<b>Applicability</b>	<b>Not on ODOT Priority List</b> ; Similar to Application 77.
<b>Physical RSE Installation</b>	Portable or Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Optional
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Road Network

<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	No
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Not Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1
<b>Data Needs from Infrastructure</b>	None
<b>Infographic</b>	None

**Table A. 6: FRATIS ▶ AASHTO: Real-Time Reliable Information**

<b>Title</b>	AASHTO: Real-Time Reliable Information
<b>CVRIA Reference</b>	<a href="#">Real-Time Reliable Information (F-ATIS)</a>
<b>Description</b>	FRATIS shall provide a specialized output interface to public sector agencies that will provide open-source data collected in the FRATIS system, such as sanitized route, speed, congestion, and alternate route selection information. This information shall support public sector freight planners and other public agencies in assessing both the needs and impacts of truck traffic in a metropolitan region (e.g., air quality reductions due to FRATIS applications, assessment of the best alternate routes, and information on where to potentially plan new connectors to support better dynamic routing). The format of the public sector output data shall be determined during the FRATIS System Development and Limited Testing phase. Similar to Applications <a href="#">31</a> . And <a href="#">46</a> .
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	The implementation of freight-specific ATIS enabled via connected vehicles will improve safety by decreasing the number of crashes, injuries and fatalities, and in turn, reduce medical costs, insurance costs, and property damage.
<b>Maturity</b>	Freight specific ATIS without connectivity is already being used in industry. Freight specific ATIS with connectivity has been demonstrated. Increasing penetration rate of connected vehicles and DSRC increases freight specific ATIS capabilities and may reduce agency costs for sensors and surveillance.
<b>Interface Requirements</b>	Back Office Interface, Infrastructure Data Interface, Roadside interface, and Infrastructure Communications Interface.
<b>Infrastructure Requirements</b>	Infrastructure Application.
<b>Vehicle Component Requirements</b>	Vehicle Application
<b>Applicability</b>	<b>Not on ODOT Priority List</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Limited Domains
<b>Mapping Support</b>	Road Network

<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1+other
<b>Data Needs from Infrastructure</b>	TI
<b>Infographic</b>	None

**Table A. 7: FRATIS ▶ AASHTO: Dynamic Route Guidance**

<b>Title</b>	AASHTO: Dynamic Route Guidance
<b>CVRIA Reference</b>	<a href="#">Dynamic Route Guidance (F-DRG)</a>
<b>Description</b>	Vehicle passes an RSU and provides speed, location and destination information. RSU relays information to central server where data is compounded with other data to derive the optimum route. Route is passed back to RSU and on to vehicle. Similar to Application 36.
<b>Category</b>	Mobility
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	Fuel saving and emission reduction are expected due to optimal routing.
<b>Maturity</b>	Well researched and considered in the FRATIS operational scenario.
<b>Interface Requirements</b>	Back office interface, infrastructure data interface, roadside interface, driver-vehicle interface
<b>Infrastructure Requirements</b>	None
<b>Vehicle Component Requirements</b>	None
<b>Applicability</b>	<b>Not on ODOT Priority List</b>
<b>Physical RSE Installation</b>	Fixed

<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Exclusive
<b>Mapping Support</b>	Road Network
<b>Siting Dependency</b>	Non-Critical
<b>Management of Collected Data</b>	Yes
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Require Threshold Deployment Level
<b>Other Dependency</b>	Privacy
<b>Data Needs from OBU</b>	BSM1+other
<b>Data Needs from Infrastructure</b>	TI

<b>Infographic</b>	<p>(Source: <a href="http://goo.gl/RLc1Du">http://goo.gl/RLc1Du</a>)</p>
--------------------	--

**Table A. 8: FRATIS ▶ AASHTO: Information for Freight Carriers**

<b>Title</b>	AASHTO: Information for Freight Carriers
<b>CVRIA Reference</b>	<a href="#">Road Weather Information for Freight Carriers</a>
<b>Description</b>	This application can be considered a special case of the Road-Weather Motorist Advisory and Warning System. Truck drivers have similar access to the variety of traveler information systems that are available to all road users. However, the available traveler information options are almost always intended for use by passenger car drivers. The limitations of the existing systems with respect to the type and quality of information provided have particular impacts on motor carriers. See Application <a href="#">39</a> .
<b>Category</b>	Road Weather
<b>ODOT Application Number</b>	--
<b>Benefits/Impact</b>	A high proportion of collisions are caused by adverse weather conditions. Though weather forecast is very reliable a real time weather advisories streamed to traffic management centers from connected vehicles can add robustness and pertinence to the prediction by giving the locally adequate warnings.
<b>Maturity</b>	With advances in RWIS, and other weather data collection and management systems, the weather related advisories and warning application is relatively mature and ready to be deployed once the infrastructure communications network and in-vehicle systems are available.
<b>Interface Requirements</b>	ITS Roadway Equipment, Maintenance and Construction Vehicle Platform, Weather Service
<b>Infrastructure Requirements</b>	Maintenance and Construction Management Center "Roadside Equipment" (RSE)
<b>Vehicle Component Requirements</b>	Maintenance and Construction Vehicle OBE, Dedicated Short Range Communications (DSRC)
<b>Applicability</b>	<b>Not on ODOT Priority List</b>
<b>Physical RSE Installation</b>	Fixed
<b>Roadside Interface to Local</b>	No
<b>Backhaul Communications</b>	Required
<b>Backhaul Restrictions</b>	Limited Domains
<b>Mapping Support</b>	Lane Level
<b>Siting Dependency</b>	Non-Critical
<b>Management of</b>	Yes

<b>Collected Data</b>	
<b>Back Office Services/Applications</b>	Yes
<b>Latency</b>	High
<b>Vehicle Data Connection</b>	Required
<b>Benefits vs. Deployment Level</b>	Benefits Realizable Day One
<b>Other Dependency</b>	None
<b>Data Needs from OBU</b>	BSM1+2
<b>Data Needs from Infrastructure</b>	App-specific

**Infographic**

**Information for Freight Carriers**  
Provides information on deteriorating road and weather conditions on specific roadway segments to both truck drivers and their dispatchers to support routing and scheduling decisions

The infographic depicts a 3D perspective of a road winding through a landscape. A large white semi-truck is driving on the road. A blue arrow points from the text above to the truck. In the foreground, two smaller cars are driving on the road. A circular warning sign with a water drop icon and the text 'Flood Ahead!' is positioned above the cars. To the right, a weather station tower with three white spheres is visible. The background shows a dark green landscape with stylized trees and a blue sky. The U.S. Department of Transportation logo is in the bottom right corner.

**APPENDIX B**

**EUROPEAN COMMISSION APPLICATIONS NOT ON ODOT LIST**

## APPENDIX B: EUROPEAN COMMISSION APPLICATIONS NOT ON ODOT LIST

**Table B. 1: European Commission Long List of Services Including the Results of the Assessment**

ODOT No.	No.	Name Of Service	Short Description	Reference	Category	EU Wide Implementation	Technical Maturity	Impact			Total	Remarks
								Safety	Efficiency	Comfort		
8.50.	1	Emergency Vehicle Warning	Warns drivers to yield right of way to an approaching emergency vehicle.	PREDRIVE C2X 3.1.1 Emergency vehicle warning DRIVE Approaching emergency vehicle warning	Safety	3	3	4	2	2	14	
14.	2	Overtaking Vehicle Warning	An overtaking (passing) vehicle signals its action to the vehicle being overtaken to secure the situation. SAF: Integration of blind spot notification	PREDRIVE C2X 3.1.7 Overtaking vehicle warning SAFESPOT Safe overtaking	Safety	2	3	3	1	3	12	
13.	3	Lane Change Assistant	Provides information about cars on neighboring lanes when the driver intends to make a lane change. SAF: Safe lane change with blind spot for trucks	PREDRIVE C2X 3.1.13 Lane change assistant SAFESPOT Lane change maneuver	Safety	2	3	3	1	2	11	
54.	4	Cooperative Merging Assistance	Vehicles negotiate the merging process with each other and give advice to the driver.	PREDRIVE C2X 3.1.16 Co-operative merging assistance	Safety	2	2	3	3	4	14	
	5	Cooperative Glare Reduction	Enables automatic switching of headlights (high-beam to low-beam) of the vehicle when it approaches an oncoming vehicle	PREDRIVE C2X3.1.17 Co-operative glare reduction	Safety	1	3	2	1	4	11	
1.	6	Intersection	Crossing vehicle collision	PREDRIVE C2X 3.1.8	Safety	1	4	5	1	1	12

				approaching indication SAFESPOT Vulnerable Road User								
8.	28	Special Vehicle Tracking	Special vehicle communication critical in-vehicle information to the infrastructure. The infrastructure monitors the spatial vehicle conditions, and deploys intervention protocols should prevent an emergency occurs.	FOTSIS Special Vehicle Tracking	Safety	1	3	4	3	1	12	
	29	Advanced Enforcement	Integration of infrastructure data with vehicle data to control traffic offenses (speed, toll, kamikaze). Notification of rules and infractions to the drivers by I2V communications. Enforcement action if necessary (Han having).	FOTSIS Advanced Enforcement	Safety	1	2	5	8	1	17	This service may not enjoy user acceptance and therefore unlikely to be deployed EU-wide.
41.	30	Infrastructure Safety Assessment	Infrastructure safety assessment analyzing information provided by the infrastructure and in-vehicle information (concept of OBU as a black box). Reconstruction of specific safety-related situations and driving behaviour (post-processing). Evaluation of safety in specific stretches of a highway.	FOTSIS Infrastructure Safety Assessment	Safety	1	2	2	1	1	7	
20.	31	Traffic Control Assessment	Service which assesses local traffic strategies based on real time traffic information.	CVIS Traffic Control Assessment	Efficiency	1	3	3	4	2	13	

ODOT No.	No.	Name Of Service	Short Description	Reference	Category	EU Wide Implementation	Technical Maturity	Impact			Total	Remarks
								Safety	Efficiency	Comfort		
61.	32	Dangerous Goods Route Guidance	Service which supports a truck driver and fleet operator to transport dangerous goods safely. Sensitive areas are provided by the (local) government to the service provider, which uses this information to guide the trucks. A dangerous goods vehicle wants to start CVIS journey and has to register at a traffic management centre which is routing the vehicle during CVIS trip. The traffic management centre provides route guidance to the dangerous goods vehicle and the vehicle is sending back the information of CVIS position and CVIS status.	CVIS Route guidance (use case)	Safety	2	3	4	3	1	13	
61.	33	Dangerous Goods Monitoring	Service which enables a (local) government authority, emergency authorities and traffic control centers to follow trucks containing dangerous goods and to provide them with emergency routes or instructions in necessary cases. The fleet operator and further call centers like police and emergency services have the possibility to have a look at the registered dangerous vehicles by means of a map display. The traffic supervisor defines the	CVIS Monitoring (Use Case)	Safety	3	3	4	3	1	14

**APPENDIX E**

**AASHTO BENEFIT COST TOOLS APPLICATIONS**

## APPENDIX E: AASHTO BENEFIT COST TOOLS APPLICATIONS

**Table E. 1: Applications Used for AASHTO CV Benefit Cost Tools**

AASHTO and the U.S. DOT have begun developing connected vehicle cost benefit analysis tools. Below is a current listing of the applications included in that system, along with numbers referencing the ODOT connected vehicle application analysis.

ODOT No.	Application	Application Description
--	Advanced Automatic Crash Notification Relay - DSRC (AACNR)	Provides the capability for a vehicle to automatically transmit an emergency message when the vehicle has been involved in a crash or other distress situation
--	Border Management Systems - DSRC (BMS)	Provides international border registration, pre-processing and border inspection capabilities
26.	Connected Eco-Driving - Cellular (CED)	Provides drivers customized real-time driving advice, such as recommended driving speeds, optimal acceleration, and optimal deceleration profiles based on prevailing traffic conditions, interactions with nearby vehicles, and upcoming road grades so that they can adjust their driving behavior to save fuel and reduce emissions
63.	Container Security - Cellular (CS)	Uses container to infrastructure communications to allow security and public safety agencies to interrogate a container relative to its contents, enabling law enforcement and security agencies to identify container contents in support of security and incident response functions
63	Container Security - DSRC (CS)	Uses container to infrastructure communications to allow security and public safety agencies to interrogate a container relative to its contents, enabling law enforcement and security agencies to identify container contents in support of security and incident response functions
53.	Cooperative Adaptive Cruise Control - DSRC (CACC)	Represents an evolutionary advancement of conventional cruise control (CCC) systems and adaptive cruise control (ACC) systems by utilizing Vehicle to Vehicle (V2V) communication to automatically synchronize the movements of many vehicles within a platoon
3.	Curve Speed Warning - Cellular (CSW)	Allows connected vehicles to receive information that it is approaching a curve along with the recommended speed for the curve
3.	Curve Speed Warning - DSRC (CSW)	Allows connected vehicles to receive information that it is approaching a curve along with the recommended speed for the curve
36.	Dynamic Eco-Routing - Cellular (DER)	Determines the most eco-friendly route, in terms of minimum fuel consumption or emissions, for individual travelers

ODOT No.	Application	Application Description
51.	Dynamic Speed Harmonization - Cellular (SPD-HARM)	Determines regulatory (e.g. variable speed limits) or advisory speed recommendations based on traffic conditions and weather information
51.	Dynamic Speed Harmonization - DSRC (SPD-HARM)	Determines regulatory (e.g. variable speed limits) or advisory speed recommendations based on traffic conditions and weather information
59.	Dynamic Transit Operations - Cellular (T-DISP)	Allows a transit passenger to send a stop request to an approaching transit vehicle
59	Dynamic Transit Operations - DSRC (T-DISP)	Allows a transit passenger to send a stop request to an approaching transit vehicle
23.	Eco-Approach and Departure at Signalized Intersections - DSRC (EADSI)	Encourages "green" approaches to and departures from signalized intersections by collecting intersection geometry information and signal phase movement information and performing calculations to provide speed advice to the driver of the vehicle allowing the driver to adapt the vehicle's speed to pass the next traffic signal on green or to decelerate to a stop in the most eco-friendly manner
30.	Eco-Cooperative Adaptive Cruise Control - DSRC (ECACC)	Is an extension to the adaptive cruise control (ACC) concept. ECACC includes longitudinal automated vehicle control while considering eco-driving strategies
28.	Eco-Lanes Management - DSRC (ELMD)	Supports the operations of eco-lanes (dedicated lanes similar to high-occupancy vehicle (HOV) or high-occupancy toll (HOT) lanes, but optimized for the environment) by gathering real-time traffic and environmental information from multiple sources including infrastructure, vehicles, and other systems and then processing these data to determine whether an eco-lane should be created or decommissioned along a roadway
28.	Eco-Lanes Management - Cellular (ELMC)	Supports the operations of eco-lanes (dedicated lanes similar to high-occupancy vehicle (HOV) or high-occupancy toll (HOT) lanes, but optimized for the environment) by gathering real-time traffic and environmental information from multiple sources including infrastructure, vehicles, and other systems and then processing these data to determine whether an eco-lane should be created or decommissioned along a roadway
32.	Eco-Ramp Metering - DSRC (ERM)	Determines the most environmentally efficient operation of traffic signals at freeway on-ramps to manage the rate of entering automobiles by collecting traffic and environmental data from connected vehicles to allow on-ramp merge operations that minimize overall emissions, including traffic and environmental conditions on the ramp and on the

ODOT No.	Application	Application Description
		freeway upstream and downstream of the ramp
32.	Eco-Smart Parking - DSRC (ESP)	Provides users with real-time location, availability, type (e.g., street, garage, AFV only), and the price of parking. The parking information can be provided via DSRC or wide area communications. The application reduces time required for drivers to search for a parking space, which can have eco benefits such as reducing emissions
29.	Eco-Speed Harmonization - DSRC (ESH)	Determines eco-speed limits based on traffic conditions, weather information, greenhouse gas emissions, and criteria pollutant information
25.	Eco-Traffic Signal Priority - DSRC (ETSP)	Allows a transit vehicle approaching a signalized intersection to request signal priority based upon the vehicle's location, speed, vehicle powertrain type, mass, grade, and associated modal GHG, criteria air pollutant emissions, adherence to its schedule or the number of passengers on the transit vehicle, as well as information from other vehicles approaching the intersection
24.	Eco-Traffic Signal Timing - DSRC (ETST)	Optimizes traffic signals for the environment rather than the current adaptive systems' objective, which is to enhance the intersection level of service or throughput, which might improve the intersection's environmental performance
50.	Emergency Vehicle Preemption - DSRC (PREEMPT)	Provides traffic signal priority for emergency vehicles traveling in a signalized network
40.	Enhanced MDSS - Cellular (EMDSS)	Incorporates the additional information that can come from collecting road weather data from connected vehicles into the existing Maintenance Decision Support System (MDSS) capabilities
62.	Freight Drayage Optimization - Cellular (FDO)	Covers the information exchanges between all intermodal parties to provide current drayage truck load matching and container availability and appointment scheduling at railroad and steamship line terminals
62.	Freight Drayage Optimization - DSRC (FDO)	Covers the information exchanges between all intermodal parties to provide current drayage truck load matching and container availability and appointment scheduling at railroad and steamship line terminals
48.	Freight Signal Priority - DSRC (FSP)	Provides traffic signal priority for freight and commercial vehicles traveling in a signalized network

ODOT No.	Application	Application Description
55.	Incident Scene Pre-Arrival Staging Guidance for Emergency Responders - DSRC (RESP-STG)	Provides situational awareness to and coordination among emergency responders- upon dispatch, while en route to establish incident scene work zones, upon initial arrival and staging of assets, and afterware if circumstances require additional dispatch and staging
56.	Incident Scene Work Zone Alerts for Drivers and Workers - Cellular (INC-ZONE)	Employs communications technologies to provide warnings and alerts relating to incident zone operations
56.	Incident Scene Work Zone Alerts for Drivers and Workers - DSRC (INC-ZONE)	Employs communications technologies to provide warnings and alerts relating to incident zone operations
43.	Integrated Multi-Modal Electronic Payment - Cellular (IMMEP)	Uses connected vehicle roadside and vehicle systems to provide the electronic payment capability for toll systems, parking systems, and other areas requiring electronic payments
43.	Integrated Multi-Modal Electronic Payment - DSRC (IMMEP)	Uses connected vehicle roadside and vehicle systems to provide the electronic payment capability for toll systems, parking systems, and other areas requiring electronic payments
47.	Intelligent Traffic Signal System - DSRC (I-SIG)	Uses both vehicle location and movement information from connected vehicles as well as infrastructure measurement of non-equipped vehicles to improve the operations of traffic signal control systems
44.	Intermittent Bus Lanes - Cellular (IBL)	Provides dedicated bus lanes during peak demand times to enhance transit operations mobility
44.	Intermittent Bus Lanes - DSRC (IBL)	Provides dedicated bus lanes during peak demand times to enhance transit operations mobility
39.	Motorist Advisories and Warnings - Cellular (MAW)	Provides the capability of collecting road weather data from connected vehicles and using that data to develop short term warnings or advisories that can be provided to individual motorists
8.	Oversize Vehicle Warning - Cellular (OVW)	Uses external measurements taken by the roadside infrastructure, and transmitted to the vehicle, to support in-vehicle determination of whether an alert/warning is necessary
8.	Oversize Vehicle Warning - DSRC (OVW)	Uses external measurements taken by the roadside infrastructure, and transmitted to the vehicle, to support in-vehicle determination of whether an alert/warning is necessary
6.	Pedestrian in Signalized Crosswalk Warning - DSRC (PSCW)	Provides to the connected vehicle information from the infrastructure that indicates the possible presence of pedestrians in a crosswalk at a signalized intersection

ODOT No.	Application	Application Description
52.	Queue Warning - Cellular (Q-WARN)	Enables vehicles within the queue event to automatically broadcast their queued status information (e.g., rapid deceleration, disabled status, lane location) to nearby upstream vehicles and to infrastructure-based central entities (such as the TMC) in order to minimize or prevent rear-end or other secondary collisions
52.	Queue Warning - DSRC (Q-WARN)	Enables vehicles within the queue event to automatically broadcast their queued status information (e.g., rapid deceleration, disabled status, lane location) to nearby upstream vehicles and to infrastructure-based central entities (such as the TMC) in order to minimize or prevent rear-end or other secondary collisions
7.	Railroad Crossing Warning - Cellular (RCW)	Alerts and/or warn drivers who are approaching an at-grade railroad crossing if they are on a crash-imminent trajectory to collide with a crossing or approaching train
7.	Railroad Crossing Warning - DSRC (RCW)	Alerts and/or warn drivers who are approaching an at-grade railroad crossing if they are on a crash-imminent trajectory to collide with a crossing or approaching train
2.	Red Light Violation Warning - DSRC (RLW)	Enables a connected vehicle approaching an instrumented signalized intersection to receive information from the infrastructure regarding the signal timing and the geometry of the intersection
22.	Reduced Speed-Work Zone Warning - DSRC (RSWZW)	Provides connected vehicles which are approaching a reduced speed zone with information on the zone's posted speed limit and/or if the configuration of the roadway is altered (e.g., lane closures, lane shifts)
44.	Restricted Lane Warnings - Cellular (RLW)	Provides the connected vehicle with restriction information about the travel lanes, such as if the lane is restricted to high occupancy vehicles (HOV), transit, or public safety vehicles only or has defined eco-lane criteria
44.	Restricted Lane Warnings - DSRC (RLW)	Provides the connected vehicle with restriction information about the travel lanes, such as if the lane is restricted to high occupancy vehicles (HOV), transit, or public safety vehicles only or has defined eco-lane criteria
42.	Road Weather Information and Routing Support for Emergency Responders - Cellular (RWIRSER)	Provides the capability of collecting road weather data from connected vehicles and other sources and using that data to develop short term warnings or advisories that can be provided to individual emergency response vehicles or to emergency response dispatchers
42.	Road Weather Information and Routing Support for Emergency Responders - DSRC (RWIRSER)	Provides the capability of collecting road weather data from connected vehicles and other sources and using that data to develop short term warnings or advisories that can be provided to individual emergency response vehicles or to emergency response dispatchers

ODOT No.	Application	Application Description
42.	Road Weather Information for Freight Carriers - Cellular (RWIFC)	Provides the capability of collecting road weather data from connected vehicles and using that data to develop short term warnings or advisories that can be provided to individual commercial vehicles or to commercial vehicle dispatchers
42.	Road Weather Information for Freight Carriers - DSRC (RWIFC)	Provides the capability of collecting road weather data from connected vehicles and using that data to develop short term warnings or advisories that can be provided to individual commercial vehicles or to commercial vehicle dispatchers
102.	Security and Credentials Management - Cellular (SCM)	A set of support applications that are used to ensure the trusted communications between mobile devices and other mobile devices or roadside devices and protect data they handle from unauthorized access
102.	Security and Credentials Management - DSRC (SCM)	A set of support applications that are used to ensure the trusted communications between mobile devices and other mobile devices or roadside devices and protect data they handle from unauthorized access
1.	Signal Phase and Timing - DSRC (SPaT)	Provides the current intersection signal light phases, current state of all lanes at a single intersection, as well as any preemption or priority
35.	Smart Park and Ride System - Cellular (SPRS)	Provides real-time information on Park and Ride capacity and supports traveler's decision-making on where best to park and make use of transit alternatives
35.	Smart Park and Ride System - DSRC (SPRS)	Provides real-time information on Park and Ride capacity and supports traveler's decision-making on where best to park and make use of transit alternatives
39.	Spot Weather Impact Warning - Cellular (SWIW)	Alerts drivers to unsafe conditions at specific points on the downstream roadway as a result of weather-related impacts, which include, but are not limited to high winds, flood conditions, ice, or fog
39.	Spot Weather Impact Warning - DSRC (SWIW)	Alerts drivers to unsafe conditions at specific points on the downstream roadway as a result of weather-related impacts, which include, but are not limited to high winds, flood conditions, ice, or fog
4.	Stop Sign Gap Assist - DSRC (SSGA)	Improves safety at non-signalized intersections where only the minor road has posted stop signs
4.	Stop Sign Violation Warning - Cellular (SSVW)	Improves safety at unsignalized intersections with posted stop signs by providing warnings to the driver approaching an unsignalized intersection
4.	Stop Sign Violation Warning - DSRC (SSVW)	Improves safety at unsignalized intersections with posted stop signs by providing warnings to the driver approaching an unsignalized intersection
48.	Transit Signal Priority - DSRC (TSP)	Uses transit vehicle to infrastructure communications to allow a transit vehicle to request a priority at one or a series of intersections

ODOT No.	Application	Application Description
58.	Transit Vehicle at Station/Stop Warnings - DSRC (TVSSW)	Informs nearby vehicles of the presence of a transit vehicle at a station or stop
17.	Vehicle Data for Traffic Operations - Cellular (VDTO)	Uses probe data information obtained from vehicles in the network to support traffic operations, including incident detection and the implementation of localized operational strategies
17.	Vehicle Data for Traffic Operations - DSRC (VDTO)	Uses probe data information obtained from vehicles in the network to support traffic operations, including incident detection and the implementation of localized operational strategies
22.	Warnings about Upcoming Work Zone - Cellular (WUWZ)	Provides information about the conditions that exist in a work zone to vehicles that are approaching the work zone
22.	Warnings about Upcoming Work Zone - DSRC (WUWZ)	Provides information about the conditions that exist in a work zone to vehicles that are approaching the work zone
42.	Weather Response Traffic Information - Cellular (WxTINFO)	Uses road weather information from connected vehicles as well as current and historical data from multiple sources to determine the appropriate current safe speed and warn drivers of coming road conditions
42.	Weather Response Traffic Information - DSRC (WxTINFO)	Uses road weather information from connected vehicles as well as current and historical data from multiple sources to determine the appropriate current safe speed and warn drivers of coming road conditions
22.	Work Zone Traveler Information - Cellular (WZTI)	Provides warnings to maintenance personnel within a work zone about potential hazards within the work zone
22.	Work Zone Traveler Information - DSRC (WZTI)	Provides warnings to maintenance personnel within a work zone about potential hazards within the work zone
